*The Father of Nutrition in India*

## PREFACE

Ever since the pioneering Indian FCT was brought out in the year 1937, the National Institute of Nutrition (ICMR), Hyderabad, has been constantly updating the compositional database of Indian foods. The new ‘Indian Food Composition Tables, 2017’, provides nutritional information on 151 discrete food components for 528 key foods. All data presented in this book originate from regional composite samples averaged for six geographical regions of the country. The voluminous food composition data of unprecedented analytical quality is statistically representative of both the national food supply and consumption pattern. The standard deviation of each component data point represents the overall variability within. No data in this book has been borrowed or derived from other data sources and represents accurate nutritional information of foods that are consumed across the country. The data are of reasonable representation of year round nationwide means and fit for assessment of nutrient intakes and their impact on health of the population. Except for eggs, all other food component data are for foods in the raw form. Food being a biological matter exhibits variations in chemical composition due to multiple factors. This is particularly true for labile nutrients like vitamins and variations are imminent due to food processing. These limitations of the FCT need to be understood by the users.

Recent studies of the relationship between diet and health have led to increased interest in the range of biologically active constituents present in foods that accompany the nutrients. This book not only provides data of regular nutrients in foods complete in all respect but also on a whole range of bioactive substances. Vitamin D<sub>2</sub> content in plant foods is presented here for the first time in the world. The tables contain data on oligosaccharides, phytosterols, organic acids and individual polyphenols. This book also embodies an exhaustive database on amino acid and fatty acid profiles of various foods. The users of the FCT will vary greatly and the data is expected to essentially benefit every national activity touching on human nutrition research, policy and education in India.

Keeping food composition data up-to-date is a continuous challenge and ‘Indian Food Composition Tables, 2017’ does not contain a exhaustive list of all foods consumed in India. The multi-cultural nature of the Indian population can be observed in the diverse ethnic foods used across the regions for which compositional database is still inconsistent and fragmentary. Food composition tables are never complete due to the constant introduction of new foods into food supply, discovery of food components that are associated with health and disease, and continuous improvements in analytical methods and techniques.

International support is necessary and the International Network of Food Data Systems (INFOODS) at the Food and Agriculture Organization of the United Nations (FAO), Rome continues to provide assistance in terms of standards development and capacity building to strengthen national food composition activities across the world. Generating high quality food composition data is an expensive proposition but essential for elevating the nutrition scenario of the country. Therefore, sustained funding from the government through policy environment is required to sustain this cardinal activity.

## ACKNOWLEDGEMENTS

Several individuals and organizations have been involved in the development of the ‘Indian Food Composition Tables, 2017’ right from conception of the programme, infrastructure establishment, capacity building and execution. This herculean task could not have been possible without the immense support from all corners.

Particular acknowledgement is due to Dr. V. M. Katoch, Former Secretary, Department of Health Research a Director General, Indian Council of Medical Research (ICMR) who recognized the importance and the need for new Indian Food Composition Database and provided the required financial grant for implementing the programme.

Special thanks to Dr. Soumya Swaminathan, Secretary, Department of Health Research & Director General, Indian Council of Medical Research for her constant support and encouragement in accomplishing the task.

Sincere thanks to Dr. B. Sesikeran, Former Director, National Institute of Nutrition (NIN) and Dr. G. S. Toteja, Scientist-G & Head, Nutrition, ICMR for facilitating the smooth operation of the project without which the project would not have seen the light of the day.

Particular thanks to Late Dr. B. S. Narasinga Rao, Former Director of NIN and Dr. Padam Singh, Former Addl. Director General, ICMR and all the Expert Committee Members for their invaluable scientific inputs which strengthened the programme.

The constant support and encouragement provided by Dr. Ute Ruth Charrondiere, INFOODS Coordinator, FAO, Rome is gratefully acknowledged. Special appreciation and thanks to Dr. Kailash Chandra, Director, ZSI., Dr. Rajkumar Rajan, Officer-in-charge, Mr. A. Anand Kumar and Mr. Shrini Vaasu from Marine Biological Regional Centre, Chennai for their tireless effort in taxonomical identification of all varieties of fish, shellfish and mollusc analyzed.

To the project scientists Dr. P. Ravindra Naik, Dr. Charles Dorni, Dr. Atmakur Hymavathi, Dr. B. Sreedhar, Dr. S. Muthuswami, Dr. V. S. S. Prasad, Dr. Smitha Mathews and all the project Technical and Supporting staff, who worked tirelessly with so much passion, a special acknowledgment of gratitude. The invaluable contribution of Mr. V. Satish Babu, Instrumentation Officer who kept all the big and small instruments in excellent condition, Technical Officers Mr. K. Mangthya, Mr. K. Subhash & Mrs. P. S. Prashanti, is gratefully acknowledged for their technical support.

The extraordinary support received from various quarters of the National Institute of Nutrition - Administration, Stores, Purchase, Accounts, Leave Section, Electrical, Plumbing and Supporting Staff, Scientific and Technical colleagues cannot be forgotten and it will go down into history as the new book ‘Indian Food Composition Tables, 2017’ is released.

# The origin and progression of Indian food composition tables: 1937-2017

## 1. Introduction

Food composition tables (FCT) are data repository for the content of nutritionally relevant chemical constituents and energy values of foods. The data compiled in the FCT normally comprises of analytical, archival, imputed, calculated and/or derived values weighted towards the most representative of the true content in a given food (Greenfield & Southgate, 2003). FCT are relied upon for nutrition research and health practice as they provide critical information regarding the content and distribution of various components in different foods. The multi-dimensional utility of FCT is enabled by a great deal of effort that goes into their construction, development and management involving statistical designs, food sampling, component characterization, analytical method development, estimation, data quality assessment, documentation and presentation.

Compositional values of foods are useful in manifold ways; in nutritional surveillance, consumer nutrition appraisal, nutrition labeling, etiology of disease prevalence, setting school menu standards-meal planning, issue of dietary guidelines- recommendations and even to estimate intake of toxic and non-nutritive components as well as to assess environmental impact of foods (FAO/WHO, 1994; MacIntosh et al., 1997; FAO/WHO, 1998; Harinarayan et al., 2007; Ayoya, Kodio, Iknane, & Sodjinou, 2010; Cunningham & Sobolewski, 2011; Archer, Hand, & Blair, 2013; Ahuja, Moshfegh, Holden, & Harris, 2013; Seljak, Stibilj, Pograjc, Mis, & Benedik, 2013; Chiu et al., 2014; Su, Jia, Wang, Wang, & Zhang, 2015; Drewnowski, Rehm, Martin, Verger, Voinnesson, & Imbert, 2015; Jansen & Roodenburg, 2016). Thus, compilation of food composition data is an important activity the utility of which spans across various sectors and disciplines.

In India, nutrient profiling of foods began almost a century ago which manifested in four main published FCT editions in the year 1937, 1951, 1971 and 1989. This chapter aims to present a historical perspective of the Indian FCT and revisions through the decades. The evolutionary tracking and the associated viewpoints expressed in chronicling FCT development will provide the framework for evaluating nutrient supply trends in India.

## 2. Pioneering nutrient evaluations and the origin of the first FCT in India

Nutritional disorders were prominent public health concern in India during the early 20<sup>th</sup> century (Barry, 1900; Annual report of Government of India, 1905; Scott, 1916; Ernest, 1917). A general inclination was to pursue research that would elucidate the facts

responsible for the prevalence of malnutrition in order to issue guidelines and deliver solutions for its prevention and control. In the year 1918, an enquiry headed by Sir Robert McCarrison was launched to investigate the prevalence of beriberi under the auspices of Indian Research Fund Association (IRFA), now Indian Council of Medical Research (ICMR). Subsequently, the research broadened to a ‘deficiency disease enquiry’ and ultimately transformed into a fully functional research organization named Nutrition Research Laboratories (NRL) housed at the Pasteur Institute, Coonoor, Nilgiri, India (Narasinga Rao, 2005a).

One of the major public health concerns that NRL, Coonoor started looking into was the protein energy malnutrition (PEM). Incipient reports on nutrient evaluations in India, suggested an emphasis on protein content and quality of Indian foods and diets (Lewis, 1880; McNamara, 1906; McCay, 1910; McCay, 1911; McCay, 1912; Passmore, 1948). Prevalence of iron deficiency anemia (IDA) among infants and children of India was also widely recognized. However, comprehensive and conclusive epidemiological studies on nutritional deficiencies in India were scarce. Aykroyd and Rajagopal (1936) reported that the weight for height of Indian children was below that of American children and almost 14% of them showed signs of deficiency diseases. Nutrient deficiency diseases such as beriberi, keratomalacia, night blindness, rickets, osteomalacia, dental caries, pellagra, pregnancy anaemia and lathyrism were of the major concern (McCarrison, 1932). In addition, incidence of goiter due to iodine deficiency was also an issue of concern affecting the Indian population in many regions of the country.

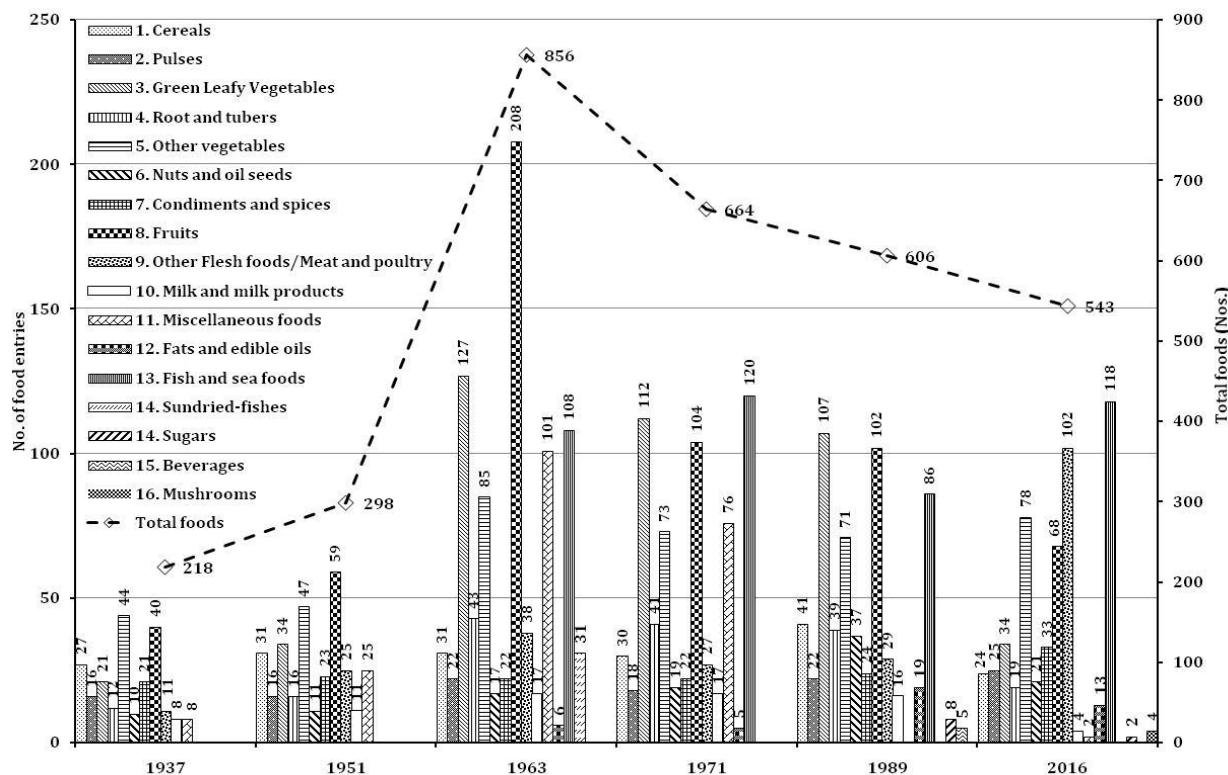

Insufficient consumption of milk, eggs and meat was found to be the cause of inadequate supply of protein, minerals such as calcium and fat soluble vitamin A among certain sections of Indian populations (McCarrison, 1925). Prevalence of malnutrition due to inadequate nutrient intake was observed throughout the country. The cause of beriberi in India was found to be low dietary supply of vitamin B either from rice or other food grains (McCarrison & Norris, 1924). Aykroyd (1932) found that milled parboiled rice contained considerably higher amount of vitamin B1 as compared to raw milled rice. Meanwhile, McCarrison (1936) established that populations who preferred consuming raw milled rice over parboiled milled rice were more prone to beriberi.

Sporadic reports on the composition of foods were available at that time. Sahasrabuddhe (1925) as well as Stewart, Boyd, & De (1931) published the tabulated

results for the chemical analyses of few common Indian foods. Data generated by McCarrison (1929) for limited number of foods was nevertheless devoid of information on mineral content, an important component in the diet. Similarly, the chemical composition of common Indian foods reported by Ranganathan, Sundararajan, and Swaminathan (1937) was lacking in information on critical vitamins content probably because quantification of vitamins in those times required specialized analytical expertise. The available reports on nutrient content of Indian foods were not comprehensive and required consolidation for wider outreach and effective utility. Based on nutritional studies, McCarrison (1932) had advised that the solution to the nutritional problems in India should evolve from a survey of food sources and classification of natural products into nutritive values involving biochemical analysis of foods for its nutrient content. Consequently, the League of Nations Technical Commission on Nutrition recommended a study into the composition of dietaries and nutritive value of principal foods due to the precarious nutrition situation (Wilson, 1937). Hence, a special enquiry into the nutritive value of Indian foods funded by the IRFA, New Delhi was initiated.

The first Indian FCT containing 218 foodstuffs was

compiled by Aykroyd (1937) and released in the form of Health Bulletin No. 23 entitled 'The Nutritive Value of Indian Foods and The Planning of Satisfactory Diets'. These foodstuffs were classified into 11 food groups among which, other vegetables (20.1%), fruits (18.3%) and cereals (12.3%) were predominant. These vegetal foods were given importance as they were being widely consumed and were considered to have the potential to mitigate the prevalent nutritional problems. Animal source foods such as milk and milk products (3.6%) and flesh foods (5%) constituted relatively a small proportion (**Figure 1**). Condiments and spices accounted for 9.6% of the total foods. Fish samples represented those consumed in west-coast of Malabar region. All the selected foods were procured from the markets of Coonoor and Coimbatore in south India, and few other places such as Bellary (*Sorghum cernuum*), Bijnor (*Fagopyrum esculentum*; *Trapa bispinosa*), Mangalore (*Eleucine coracana*; *Triticum vulgare*; *Cicer arietinum*, *Dolichos biflorus*; *Cajanus indicus*), Darbanga (*Eleucine coracana*; *Glycine hispida*; *Lathyrus sativus*), Mysore (*Dolichos lablab*), Ahmedabad (*Glycine hispida*), Godavari (*Hibiscus sabdariffa*; *Spinacia oleracea*), West Godavari (*Momordica charantia*), Bangalore (*Coccinia indica*), Salem (*Mangifera indica*) and Punjab (*Citrus aurantium*) (Aykroyd, 1937).

**Figure 1.** Metastasis of food representation by food groups in Indian Food Composition Tables, 1937-2017.  
**Sources:** Aykroyd (1937); Aykroyd et al. (1951); Aykroyd et al. (1963); Gopalan et al. (1971); Gopalan et al. revised and updated by Narasinga Rao, Deosthale, and Pant (1989).

Values for a total of 17 components were reported in the first edition though some components were not complete for every food (**Table 1**). The methods described by Ranganathan et al. (1937) were adopted for analysis of various foodstuffs. The values for moisture, mineral matter, fat, crude fibre and protein were determined analytically and the results were presented as percentage of the original sample. Carbohydrate content was obtained by subtracting the sum of moisture, total mineral matter, ether extractives, crude fibre and proteins from 100 while calorific values were derived by calculation according to Atwater (1889), assuming that a gram of protein or carbohydrate yields 4 Cal and a gram of fat yields 9 Cal of energy. Calcium was analyzed by titrimetry (Ranganthan et al., 1937), phosphorus by volumetric method (Association of Official Agricultural Chemists AOAC, 1930) and these minerals were expressed as g/100g. Total iron content was estimated by colorimetry following potassium thiocyanate method and the results were reported as mg/100g. Carotene values were estimated by spectrophotometric method and the values were expressed as vitamin A equivalent international units (IU) per 100g. The data for vitamin B1 content for 75 food entries was sourced from the published journal articles particularly by Wilson et al. (1937) and were

presented in terms of IU per 100g. The tables thus provided the baseline availability of vitamin B1 in Indian foods to help formulate balanced diet and alleviate the incidence of beriberi. Vitamin B2 was estimated by biological method and the results were presented under the categories of rich (+++), good (++) presence (+) and poor (negligible). Vitamin C was estimated by chemical method and expressed as mg/100g (**Table 2**).

The protein biological value (BV) of 36 proteinaceous foodstuffs was also provided as an appendix in addition to the protein content of foods in regular tables. BV of proteins came from NRL, Coonoor and Seth Gordhandas Sunderdas Medical College (Now King Edward Memorial Hospital), Bombay (now Mumbai) where determination of protein BV was initiated (Narasinga Rao, 2005b). Similarly, the percentage of available iron out of total iron in 26 hematopoietic foodstuffs was also provided as an appendix to help in recommending foods for alleviating the prevalence of IDA. The available proportion of iron in Indian foodstuffs was then estimated by chemical balance method (Goswami & Basu, 1938). Food values in the Health Bulletin

**Notes:** Values represent No. of components. Figures in parenthesis indicate number of food entries. **Source:** **1:** Aykroyd (1937); **2:** Aykroyd et al. (1951); **3:** Aykroyd et al. (1963); **4:** Gopalan et al. (1971); **5:** Gopalan et al., revised and updated by Narasinga

No. 23 (Aykroyd, 1937) mostly represented the composition of Indian foods analyzed at NRL, Coonoor (Swaminathan, 1937; Ranganathan et al., 1937). Additionally some nutrient values from India published in scientific articles particularly those from the Department of Biochemistry and Nutrition, All India Institute of Hygiene and Public Health, Calcutta (now Kolkata) were also made use of. However, the proportion of data from NRL, Coonoor and those collected from other research laboratories in India could not be ascertained. Even though, the iodine content of 100 varieties of Indian foods was reported by Patnaik (1934) from NRL, Coonoor, they were not included in this edition of composition tables as the topic was so convoluted that it was considered outside the scope of the bulletin.

Many significant interpretations emanated from the food values in the first compiled edition of NRL, Coonoor. The data enabled calculation of the actual energy values of foods consumed and facilitated evaluation of optimal requirements. The FCT revealed that the proteins derived from animal sources such as beef muscle and whole egg had comparatively higher protein BV of 98 and 94%, respectively which were much higher than vegetal proteins like bengal gram

with 76% and soya bean with 54%. Among the vegetal foods, pulses were found to be rich sources of protein ranging from 17.08% in bengal gram to 43.22% in soya bean. Vitamin A was found to occur in animal fats and the richest source was halibut liver oil containing 3900000 IU/100g. Vegetable oils and fats were found to be generally devoid of vitamin A and carotene except red palm (*Elaeis guineensis*) oil, which contained carotene equivalent to 44,000 IU of vitamin A per 100g. Apart from leafy vegetables (2000 – 12630 IU), carrots (2000 – 4300 IU), ripe fruits such as mangoes and papaya with 2020 and 4800 IU carotene equivalent vitamin A per 100g, respectively were considered among the richest dietary source of carotene. Foods such as coconut, soy and avocado had fat content of 41.6, 19.5 and 22.8%, respectively and were regarded as rich sources of fat. Calcium was found to be present in large amounts in buffalo milk (0.203%), 'ragi' (0.334%) as well as leafy vegetables such as 'agathi' (1.131%) and 'curry leaves' (0.811%). The bioavailability of iron in meat, like pork muscle (86%) and beef liver (70%) was much higher than that of vegetables like spinach (19%) and lettuce (25%). Whole wheat was found to be rich source of vitamin B1 containing 230 IU/100g, while milled rice was observed to be poor source. Milk and milk products,

eggs, pulses, leafy vegetables, certain roots and tubers were reported as good sources of vitamin B2. Unsprouted pulses lacked vitamin C; nevertheless, sprouted pulses contained 10 to 15 mg of vitamin C per 100g.

After one year, the second edition of Health Bulletin No. 23 was published in the year 1938 which was widely circulated and translated into several Indian languages for greater popularity, wider outreach, general public nutrition education and utility. In this edition, a section on infant feeding was also added and corrections were incorporated for bringing in more clarity. The general configuration however, remained unchanged.

A revised and enlarged third edition was published in the year 1941 wherein the reported number of foods increased to 284. Content wise the third edition was substantially similar to previous two editions. Calorie values of the foods per ounce were provided as an additional column. The scientific nomenclature of the foods was provided as a separate column alongside the nutrient values. The indicative expressions for vitamin B2 was excluded in third edition as these were not quantified values and were unreliable for estimating intake levels. The importance of '*amla*' (*Phyllanthus emblica*) as a rich source of vitamin C was highlighted. Indian fish liver oil was proposed as a substitute for cod liver oil. Vernacular names of the foodstuffs in 'Hindustani' (now Hindi) language were additionally provided in the appendix against english names for the general public reference.

### **3. Health Bulletin No. 23, 4<sup>th</sup> edition 1951**

Between 1938 and 1951, there was a notable transition in the Indian nutrition scenario. Among tropical regions, India contributed substantially in the field of nutrition (Nicholls, 1945). The incidence of pellagra was noticed and the role of niacin in its cure was successfully demonstrated in India (Raman, 1940; Aykroyd & Swaminathan, 1940). The agricultural practices in India also underwent modifications with concomitant increase in the crop yields. However, the basic diet of individuals remained inadequate, devoid of animal fats and proteins, due to poor economic conditions (Day, 1944). The translation of nutrition research into sustained public health was hindered by obstacles of weak economy, ignorance and poverty (Aykroyd, 1941). Other deficiency diseases such as maternal anaemia, infant beriberi and osteomalacia continued to be rampant. Sustained nutritional issues prompted the revision of Indian FCT resulting in the publication of fourth edition of the Health Bulletin No. 23 by Aykroyd, Patwardhan, and Ranganathan (1951).

The food grouping pattern remained unchanged in the Health bulletin No. 23, 4<sup>th</sup> edition. However, new foods were added to the groups increasing the total number of foods to 298 (**Figure 1**) out of which, fruits, other vegetables, green leafy vegetables (GLVs) and cereals

constituted 19.7, 15.7, 11.4 and 10.4%, respectively. The number of flesh foods increased 2.2 times with addition of 14 new foods. Miscellaneous foods increased 3.1 times with addition of 17 new foods. Fruits and GLVs were expanded with addition of 19 and 13 foods, respectively. Three new foods were added in the class of milk and milk products. Pre-emptive knowledge regarding distribution of key micronutrients, mostly gained from past compilation, perhaps led to expansion of these food groups. The number of foods in pulses category however remained the same. Food sampling locations were the same as reported in the previous edition.

The 1951 version of the Health Bulletin No. 23 reflected improvement of analytical technique, which was quickly adopted in India. Unlike the previous 1937 edition where the values for B1 were sourced from scientific journals and expressed as IU/100g, in this revised edition, vitamin B1 was determined experimentally and the analytical values were expressed in terms of µg/100g (**Table 2**) to enable accurate intake estimations. Microbiological assays were introduced for determination of vitamins particularly that of riboflavin. The mode of expression for riboflavin was modified from indicative to quantitative form of µg/100g which made comparison of levels between different foods possible. Nicotinic acid content of foods, reported in terms of mg/100g, was added to the existing nutrient parameters to help in diet based mitigation of pellagra. However, the content of nicotinic acid and riboflavin were analyzed for some foods while the rest of information was drawn from literature. While taking the values from the scientific literature, preference was given to data that originated from India (Aykroyd, Patwardhan, & Ranganathan, 1951).

Since there was a great deal of difference between the Indian measures, the metric and avoirdupois system used in various provinces during those times, the nutrient values were additionally expressed either as gram (g) or milligram (mg) or microgram (µg) or international units (IU) per ounce of the edible portion. The appendix on the available percentage of iron in foodstuffs was dispensed with due to inconsistencies with estimations. However, the appendix on BV of proteins was retained and even augmented by providing additional data for 13 new foodstuffs. Vernacular names in 9 Indian languages viz., Hindi, Tamil, Telugu, Kannada, Oriya, Marathi, Bengali, Gujarati and Malayalam were provided against the English names for all the foodstuffs in addition to the scientific nomenclature for wider public utility across India.

Some of the significant and novel findings in this edition include the finding that the nutrient composition of undiluted buttermilk was similar to that of whole milk excluding its fat content. Honey was found to contain about 80% of sugars composed of fructose and

glucose and devoid of vitamins except vitamin C. Vitamin A content was found to be distributed in animal source foods like butter, ghee, whole milk, egg yolk, liver and fish. Among animal fats, cod liver oil (60000 to 200000 IU/100g) and halibut liver oil (390000 IU/100g) were reported as richest sources of vitamin A. Whole bengal gram (*Cicer arietinum*) was found to be devoid of vitamin C in their native state. Sprouted mung or green gram (*Phaseolus radiatus*) contained about three times more vitamin C than sprouted bengal gram whereas, ‘*amla*’ (*Emblica officinalis*) containing 600 mg of vitamin C per 100g was regarded as the richest source of vitamin C.

The fifth edition of Health Bulletin No. 23, published by Aykroyd and Patwardhan (1956) focused on the general aspects of nutritional physiology in India. Since rice was the major staple consumed in larger proportion, the nutritive values of rice and rice products were studied in detail and published exclusively as separate and new edition in the year 1959 entitled “Rice”- Health Bulletin No. 28.

#### 4. Sixth revised edition of Indian FCT 1963

In the subsequent years between 1952 and 1962, growth in nutrition oriented research in India took place even while deficiency disorders continued to be widespread. The diets predominantly comprised of cereals, small quantities of pulses, green vegetables and lesser proportion of milk, meat and eggs. Protein malnutrition was of considerable magnitude particularly among the poor communities (Rao, Swaminathan, Swarup, & Patwardhan, 1959). Incidence of kwashiorkor and marasmus were observed across India (Gopalan & Ramalingaswami, 1955). Scientific articles around this time elucidated the role of amino acids in regulation of human health. Pellagra was reportedly instigated by amino acid imbalance of the sorghum diet, due to relatively excess leucine intake (Gopalan, 1961). Additionally, it was reported that the BV of proteins may not be limited by single amino acid but could be due to combined effects of partial amino acid deficiencies (Patwardhan, 1956). Among micronutrient deficiencies, iron deficiency anemia (IDA) was observed more among rural sections of populations while kwashiorkor occurred throughout India (Patwardhan, 1961). It was found that the prevalence of IDA was greater in India when compared to Europe due to excessive phosphorus and phytic acid with concomitant low calcium levels in the diet. About 16% of population had less than 8 g/100 dl mean blood haemoglobin level while the daily intake of iron among Indian populations ranged from 12 to 40 mg (Foy & Kondi, 1957). The occurrence of IDA was therefore observed to be not exclusively limited to the low iron intake from the diets but was also attributed to poor gastrointestinal absorption, inhibition of iron uptake by other dietary components or even the loss of absorbed iron.

The sixth revised edition was brought out by Aykroyd, Gopalan, and Balasubramanian (1963) in the form of a Special Report Series No. 42 retaining the original title ‘Nutritive value of Indian foods and the planning of the satisfactory diets’. All the available literature based nutrient values of the Indian foods in this edition were inclusively compiled which significantly raised the total number of foods to 856; the highest among all the FCT published so far (Figure 1). Fruits and GLVs constituted 24.2 and 14.8%, respectively. ‘Fishes and other sea foods’ category, introduced as a new food group in this edition, constituted about 12.6% of total foods. Fats and edible oils were classified as yet another additional food group accounting for 0.7% of total foods in the FCT. Addition of fish, fats and edible oils as new food groups implied a better understanding about the role of amino and fatty acids in regulation of human health and their distribution in different foods (Chakrabarty & Hilditch, 1951; Master & Magar, 1954; Subrahmanyam, Swaminathan, Rao, & Joseph, 1961; Subrahmanyam, Sreenivasan, & Swaminathan, 1962). Among the new food groups, the compositional values of 108 numbers of ‘fish and other sea foods’ comprised the largest section in the tables. ‘Milk and milk products’ constituted 1.9% of total foods. The number of food entries was expanded by 3.7, 4 and 2.7 times in GLVs, miscellaneous foods and ‘roots and tubers’ categories, respectively to widen the coverage of foods consumed across India. Compared to the last edition of the year 1951, additional columns for the biological nature and the mass percentage of edible portions were also given.

The consumption of skimmed milk powder was found to be beneficial in the treatment of kwashiorkor in the areas where milk availability was limited. Legume proteins were also found to be useful in treatment of protein malnutrition (Patwardhan, 1962; Gopalan, 1961). Therefore, skimmed milk along with whole milk powder and certain legumes were included in the 1963 edition. The values for PER, a measure of protein quality were provided in addition to the existing protein BV (Table 1). The BV of proteins represented percentage of absorbed nitrogen retained in the body when food was considered as the sole source of nitrogen. PER was calculated from the gain in weight per gram of protein consumed. Protein content was calculated from nitrogen content by multiplying with the factor of 6.25. The data for eleven essential amino acids along with total nitrogen were included in the 1963 tables for the first time, to provide dietary nutrition solutions to tackle the incidence of pellagra and protein malnutrition. Amino acid values were drawn from research work carried out in India based on initial microbiological methods and later using automated amino acid analyzer, mostly at National Institute of Nutrition (NIN), Hyderabad and Central Food Technological Research Institute (CFTRI), Mysore. Amino acid content was expressed in terms of g/g N.

In order to provide dietetic solutions for alleviating IDA, iron content of foods were reported as total, ionizable and percentage of ionizable iron out of total iron. Percent ionizable iron content was introduced into the main table rather than as appendix to enlist different haematopoietic foods. Calcium and magnesium salts of phytic acid are insoluble and these minerals are hence rendered less bio-available. Phytates are resistant to digestion and the phosphorus in them is also not readily available. Therefore, phosphorus contents of certain foods was reported in three different forms namely, total phosphorus, phytin-phosphorus and percent phytin-phosphorus out of total phosphorus to aid in efficient diet based mitigation of osteomalacia. For the first time, oxalic acid content was also reported for 830 food entries in this 1963 edition. Oxalic acid was considered as an anti-nutrient along with phytin-phosphorus and were tabulated together, since physiology of mineral absorption and nutritional impediments caused by anti-nutrients were well deciphered.

Mineral data comprised of 9 individual elements in total as compared to 3 elements in previous edition. Magnesium, sodium, potassium, copper, sulphur and chlorine were the new inclusions (**Table 1**). All mineral contents were expressed in terms of mg/100g. Acid-base balance of foods that could be calculated from mineral content were provided to aid in the formulation or use of foods as therapeutic diets since large sections of rural population in India depended on the Indian system of diet based therapeutics and medication. Intake of folic acid was thought to play important role in curing anaemia in those days. Among vitamins, the contents of biotin, choline, inositol, pantothenic acid, pyridoxine and vitamin K including folic acid for 533 food entries were new inclusions (**Table 1**). Total β-carotene content obtained by solvent partition was multiplied by a factor of 10/6 to arrive at vitamin A value in IU/100g. Vitamin B1 was estimated mostly by chemical and to a small extent by biological methods (**Table 2**). Data expression units were either in gm or mg or µg per 100g edible portion. The percentage of polyunsaturated fatty acids (PUFA) in oils and fats were also provided for the first time in this 1963 edition because of their relevance in the management of cardiovascular disease.

Nutrient content of foods in the sixth edition was mostly based on the work carried out at NRL, Coonoor where quantification of nutrient values was funded by Nutrition Research Funds Association (NRFA). Nutrient values were also obtained from institutions like University College of Technological Research Institute, Mysore; State Food and Drug Laboratory, Ambala Cantonment and Nutrition Laboratory, Patna to provide wider coverage for several constituents of different foods consumed across the country. However, no information was found on the extent of data obtained from these centers.

In order to meet the demands of teachers of home science and nutrition; researchers of diet and nutrition surveys as well as dieticians in hospitals, a handy and portable document, named Special Report Series No. 42 entitled “Nutritive Value of Indian Foods-Tables of Food Values” was brought out by Aykroyd, Gopalan, and Balasubramanian (1966). This book contained only the tabulated values and brief text on principles of nutrition and dietetics while the number of foods and component parameters, scientific and vernacular names remained unchanged.

##### **5. Nutritive value of Indian foods (NVIF), 1971**

In a relatively short duration between 1964 and 1970 there was very little probability for the alteration in the nutritive value of Indian foods. The dietary pattern remained similar despite economic growth, probably due to concomitant population expansion, low income and inadequate food supply (Rao, 1967). A slight upward trend was noted in the consumption of foods from animal sources, fats, sugars while a slight decline was noticed in the intakes of vegetables and food grains. Yet, diets were found to be inadequate in protein, vitamin A, calcium, iron, energy, ascorbic acid, thiamine and riboflavin according to Nutritional Advisory Committee (NAC) of the ICMR (Devadas et al., 1965). The Indian population continued to thrive on subsistence vegetarian diets with little or no milk. These dietetic and nutritional factors were considered while revising the FCT. Subsequently, a consolidated FCT entitled ‘Nutritive Value of Indian Foods’ was released by Gopalan, Ramasastri, and Balasubramanian (1971). The phrase ‘Planning of Satisfactory Diets’ was excluded from the title probably due to increase in consumer options triggered by economic growth.

Apart from inadequate dietary iron intake, the incidence of IDA was additionally ascribed to impair iron absorption leading to metabolic deficit due to preference for cereal rather than iron rich foods (Venkatachalam, 1968). Protein energy malnutrition (PEM) in the forms of Kwashiorkor (protein and calorie deficiency) and marasmus (calorie deficiency) were evident among children and were regarded as the most prevalent and widespread nutritional problems in India during those days (Gopalan, 1970). Nutritional hypertension observed among Indian population was at that time ascribed to the differential proportion of long chain versus short chain fatty acids in the fats and oils consumed (Malhotra, 1970).

The NVIF (1971), provided data for a total of 664 foods (**Figure 1**). The net reduction in number of components to 45 from 51 (in the previous 1963 edition) was due to exclusion of components parameters of ionisable iron, percent ionisable iron, biotin, inositol, pantothenic acid, pyridoxine, vitamin K, protein BV and PER and inclusion of free folate, B12 and tyrosine. The total number of food representations dwindled by 22% compared to previous

edition, since analytical values were prioritized. Fruits in particular were reduced by 50%. The descriptive column for the nature of edible portion was removed probably due to more emphasis on nutrient data.

Free folic acid and vitamin B12 were included as new components in this 1971 edition to provide dietetic options for solving the issues of certain types of anemia, cardiovascular disorders and neural dysfunctions caused by their inadequacy. Folate contents for 68 food entries were evaluated microbiologically and were presented as free and total folate to aid in deciphering the degree of bioavailability from different foods. The free and total folate contents were estimated before and after incubation of food extracts with folic acid conjugase, respectively. Vitamin B12 was estimated by biological method using *Euglena gracilis* as the test organism, and the data was presented for 17 animal source foods in terms of µg/100g of edible portion. Many vitamins such as biotin, inositol, pantothenic acid, pyridoxine and vitamin K were however not considered in this edition due to scarcity of updated data, lack of clarity on deficiency symptoms and obscure metabolic role in those times. Due to lack of definite information about the conversion of carotene to vitamin A in the body, β-carotene values (estimated by alcohol extraction and ether partitioning) were expressed as µg/100g. Vitamin A content of pertinent foods was calculated considering 1 IU of vitamin A as equal to 0.3 µg of retinol. Vitamin C was estimated by 2, 6-dichlorophenol indophenol-xylene extraction method to avoid interference of colored extracts. Choline values for 60 food entries were presented as a separate table in terms of mg/100g edible portion (**Table 1**). Riboflavin and nicotinic acid were estimated by microbiological assays (**Table 2**).

The contents of ionizable iron and percentage of ionizable iron out of total iron was excluded in this edition probably due to low analytical reliability. Minerals such as Ca, P and Fe were estimated by standard AOAC methods using atomic absorption spectroscopy (AAS). The values of certain trace elements such as Mn and Zn analyzed by chemical methods were considered unreliable and were therefore not included in the tables. Phytate content was determined as phytin-phosphorus and the values were expressed as mg/100g as well as percentage of phytin phosphorus out of total phosphorus.

Protein BV and PER were also not considered in this 1971 edition since amino acid composition was given preference. The amino acid composition and total nitrogen content of foods were partly analysed at National Institute of Nutrition (NIN), Hyderabad and partly sourced from Indian literature. Unlike previous editions, the derived energy values were expressed in terms of kcal/100g. The PUFA content of twelve commonly consumed fats and oils were mostly analyzed using gas liquid chromatography at CFTRI,

Mysore and NIN, Hyderabad and the results were expressed as gram percentage. The vernacular names of foods in Indian languages saw the inclusion of 'Kashmiri' and 'Punjabi' in this edition. The data presented in this edition was primarily taken from the work carried out at NIN, Hyderabad funded by ICMR, New Delhi. In order to increase the coverage of foodstuffs and the number of food constituents, data that originated from University College of Science and Technology, Calcutta; Haffkine Institute, Bombay (now Mumbai); CFTRI, Mysore; State Food and Drug Laboratories, Ambala Cantonment and Nutrition Laboratory, Patna were also included. The extent of sourced food values from various Indian scientific journals were neither specifically demarcated nor cited as to which components or foods.

Among the notable observations in this publication, fresh green vegetables, liver and pulses were regarded as good sources of folates. It was also reported that only animal source foods such as meat, milk and liver contained vitamin B12. GLVs were found to be rich in calcium, iron, carotene, riboflavin and folic acid. Potatoes contained significant amount of vitamin C (17 mg/100g). Jaggery (cane) was found to be a good source of iron with 11.4 mg/100g. The liver oils of cod, shark and halibut contained 20000-70000, 70000, and 1000000 µg of preformed vitamin A per 100g, respectively.

## 6. Nutritive value of Indian foods, 1989

The green revolution ushered in food security and there was a substantial decrease in the levels of poverty in India. After 1971, the status of nutritional deficiencies was observed to have improved with the reduction in the prevalence of IDA, vitamin A deficiency (VAD) and child malnutrition except the incidence of goitre which had escalated. Between 1971 and 1974, the prevalence of corneal disease (vitamin A deficiency) accounted for about 2% of the cases of blindness in India (Reddy, Shekar, Rao, & Gillespie, 1992). Between 1975 and 1990, there was a decline in clinical deficiency signs of VAD among children of 1 to 5 years in rural areas (National Nutrition Monitoring Bureau, NNMB Report, 1991). The prevalence of marasmus and kwashiorkor also decreased from 1.3 to 0.6 % and 0.4 to 0.1%, respectively. However, chronic diseases such as diabetes and cardiovascular health became matters of public health concern.

In order to rectify some of the shortcomings of the previous editions and to make space for new developments in nutrition situation, the NVIF was revised and updated (Gopalan, Ramasastri, & Balasubramanian, revised and updated by Narasinga Rao, Deosthale, & Pant, 1989). In this edition, foods were categorized into 14 groups with the segregation of 'meat and poultry', 'sugars' and 'beverages'. The content values for 64 individual components in 606 foods were compiled (**Table 1**). The foods were

classified into ‘common’ and ‘less familiar’. The content of proximate, minerals and trace elements, vitamins and essential amino acids were tabulated separately for ‘common’ and ‘less familiar’ foods. Total and  $\beta$ -carotene contents were quantified using high performance liquid chromatography (HPLC) for 29 food entries and the values were reported as  $\mu\text{g}/100\text{g}$  in a separate table. Similarly, fatty acid composition, analyzed by gas chromatography for 16 commonly consumed edible oils and fats were given as separate table in addition to fat and fatty acid composition of 26 ‘common foods’. Thus, fatty acid compositions for a cumulative 42 food entries were provided, to aid in devising nutrition solutions for various age and physiological groups of populations. Vitamin B12 content of 2 fish foods, 8 flesh foods and 7 ‘milk and milk products’ were also provided as separate table. In this edition, miscellaneous foods were integrated with ‘less familiar’ foods (**Figure 1**).

Recognizing the importance of dietary fibers in regulation of human health, contents of soluble dietary fibre (SDF) and insoluble dietary fibre (IDF) were given for 106 food entries to find dietetic nutrition solutions for high prevalence of chronic diseases such as obesity and diabetes. Quantified values of trace elements such as manganese, molybdenum, zinc and chromium for 227 food entries were the new inclusions. The corrected values of nutrients particularly that of iron was included in this revised edition. Minerals such as Mg, Na, K, Cu, Mn, Mo, Zn, Cr, S and Cl were analyzed by AAS, whereas Ca, P and Fe were estimated by standard AOAC methods. Prevalence of iron deficiency was found to be not exclusively due to low dietary iron intake but also due to the folate and vitamin B12 deficiencies (Yusufji, Mathan, & Baker, 1973) as well as other factors such as absorption. Therefore, the components of ionizable iron content and percentage of ionisable iron out of total iron were dropped in this edition. Acid-base balances of foods were also withdrawn. However, the

components of oxalic acid and phytin-phosphorus were retained and that of vitamin B6 was reintroduced.

In this edition, pulses, millets and GLVs were in general regarded as relatively rich sources of dietary iron. Fenugreek seeds were found to contain 48.6% IDF and 20% SDF, substantially higher compared to other foods. Safflower oil contained high levels of unsaturated fats. Groundnut oil with moderate levels of polyunsaturated fatty acids (PUFA) was considered as a good source of essential fatty acids. Rice bran oil was found to have fatty acid composition similar to groundnut oil. Fishes were found to contain omega-3 fatty acids, considered beneficial for cardiovascular health.

## 7. Notable transitions between 1937 and 1989 editions of Indian FCT

A steady progress in the analytical methods and techniques ensued with every major revision. In 1937, crude fibre was estimated in the residue left after ether extraction of fat, but in the 1989 edition dietary fibre values determined by enzymatic analysis akin to human gastric digestion, were reported. Minerals previously estimated by titrimetry, volumetry and colorimetry were replaced with modern reliable methods and quantified using AAS. Total  $\beta$ -carotene estimated previously by chemical methods was quantified by liquid chromatography in the 1989 edition for selected foods. Vitamins were quantitatively expressed as  $\mu\text{g}$  or  $\text{mg}/100\text{g}$  unlike initial FCT where they were reported in terms of  $\text{IU}/100\text{g}$ . Amino acid contents were expressed as  $\text{mg/g N}$  in 1989 edition as against  $\text{g/g N}$  in previous editions. Minerals were expressed in terms of  $\text{mg}/100\text{g}$  as against  $\text{g\%}$  in earlier editions, thus progressing towards better precision.

The number of decimal places of the reported data values increased for thiamine, riboflavin, folic acid and PUFA over the decades (**Table 3**). The transition in the

**Table 3. Data presentation for selected components in published editions of Indian food composition tables.**

**Notes:** Values were normalized to uniform expression units for each food group on dry weigh basis. \* Significant change at  $p \leq 0.05$  in the two-sided pair-wise comparisons test. - Not included in the analysis due to less than two common foods with data points. CHO, Carbohydrates.

data expression units and precision indicates enhanced accuracy and sensitivities of analytical techniques. The number of food constituents in FCT editions from 1963 onwards was resolved further into sub-components like phytin-phosphorus, ionizable iron fraction, free folic acid, individual essential amino acids, individual fatty acids, oxalic acid, SDF and IDF. Even while the number of foods increased in each food group, least expansion was observed in the ‘condiments and spices’ group with addition of only three new food items between 1937 and 1989.

The presentation of data value in all the published FCT were in the form of unitary numeric values either with or without decimal places and lacked variability of the contents. It was observed that the food sampling was limited to only few locations. Perhaps inclusion of data reported from other parts of the country served for the dimension of geographic distribution. Hence, the data were not true representation of foods consumed throughout the country. Unlike other countries FCT (McCance & Widdowson, 1960) which have additionally provided the composition of processed, prepared, preserved and cooked foods, Indian FCT have largely focussed on foods in their raw state due to large variation in the food habits, methods of preparation and minimal usage of processed foods in the country.

Common food groups in the FCT of 1937 and 1989 editions with an intermediary duration of about fifty years were compared based upon the mean nutrient and energy values after normalizing to common expression units on dry weight basis. It was observed that the alteration in nutrient content of 202 common foods

belonging to eleven common food groups were meager despite several intermittent revisions. Percent change in the mean moisture, protein, ash, fibre and energy values of all food groups were insignificant and below 10%. Apparent rise observed in fat contents of food groups, perhaps due to improvement in the extraction techniques and reduced interference, were nevertheless insignificant. Carbohydrates in leafy vegetables declined significantly though the magnitude of change was only 12%. Such decrease is due to cumulative changes in the protein, fat, ash and fibre contents because the carbohydrate values were derived ‘by difference’. Thiamine content of roots and tubers decreased significantly by 67% (**Table 4**). Despite alteration in agro-climatic conditions, modalities of food production and supply practices, sampling pattern, description of edible portions, advancement in the analytical techniques, the composition of large number of foods remained fairly steady without remarkable change which implies that substantial nutrient values exhibited carry forward trend from 1937 FCT.

The need for comprehensive and updated compositional data far surpassed the available range of food data for effective nutrition management. Sound food composition databases that are both comprehensive and representative of foods available and consumed in the country are essential basic tools for a variety of activities. Interest in food components is expanding rapidly, as are the varieties of foods that are available and consumed. The NVIF is an important contribution to the human knowledge, especially in the Indian context but the data is outdated and based on the methods available about 2-3 decades ago with partial or limited coverage of foods and nutrients. Further, no

documentation is available as to the sampling procedure followed or the source of the data. Due to deficit of many of the nutrient data which stimulate disproportional costs and inefficient use of resources, it was deemed necessary to completely revamp the Indian FCT with a totally new compositional database.

### **8. The New Indian Food Composition Tables, 2017**

Economic liberalization and globalization changed the food and nutrition scenario in India. Between 1990 and 2010, the daily per capita supply of energy, protein and fat increased by 11, 12 and 30%, respectively. Consumption of fruits, starchy roots, vegetables increased by 91, 52 and 46%, respectively (Food and Agriculture Organization Statistics, FAOSTAT, 2013), though a steady increase in the food price was also observed. A change in dietary pattern was observed as the conventional diet of the Indian populations shifted largely due to the modified food supply systems. Reduction in incidence of kwashiorkor from 0.2 to 0% and bitot's spot from 0.7 to 0.2%, respectively among pre-school children (NNMB, 2012) was noticed. However, new public health issues emerged. The risk factors of overweight increased to 11.8 and 15.5% in men and women, respectively (NNMB, 2012). Prevalence of child malnourishment at 45.9% (National Family Health Survey NFHS-3, 2006), any anemia at 79% among 6-35 month children (NFHS-3, 2007), underweight among women at 35.6% women (NFHS-3, 2007), anemia at 55.3% among women of 15 to 49 years of age (NFHS-3, 2006), diabetes at 8.63% (International Diabetes Federation IDF, 2014), hypertension at 22.2% in men and 21.6% in women (NNMB, 2012) came to be matters of new public health concern.

The latest Indian food composition database funded by the ICMR covers all the key foods sampled from the entire country drawn from statistically valid sampling method. About 200 discrete food constituents including sub-components were standardized for analytical evaluation. In addition to the existing nutrients in NVIF, about 136 new components were additionally evaluated accounting for 212% increase over the number of components in the previous 1989 edition. Incorporation of such wide spectrum of nutritional components conforms to the requirements for dealing

with various nutritional issues present today. Individual data for endemic foods of six geographic regions of the country were generated and compiled.

### **9. Conclusions**

In India, nutrient evaluation of food was pioneered by Sir Robert McCarrison almost a century back resulting in the publication of the first Indian FCT in the year 1937. Indian FCT underwent revisions both in design and data quality in about every 12.5 years until 1989 and has effectively served dieticians, nutritionists and clinicians. Demerging, extension and expansion of food groups brought more clarity and widened the options to formulate effective nutrition solutions. In every edition emphasis was laid on nutritionally relevant component of food according to the nutritional situation of the country. During progression of the FCT it was observed that analytical data gained importance with the availability of improved methods of analysis and resources. Increase in the number of individual food components also reflected better understanding of nutritional roles as well as accessibility to new sensitive and selective analytical methodologies.

As metabolic links between newly defined constituents of the human diet and health conditions are established and as new dietary patterns emerge, FCT need to be structured accordingly. Without good food composition data, nutrition research cannot establish or explain the interrelationship between diet and its influence on health. Food composition databases are never complete due to the constant introduction of new foods into a food supply, newly discovered food components that are associated with health and disease, and continued improvements in methods of analysis. The food supply is now more dynamic than ever with increased availability and access to various foods from different parts of the country due to enhanced transportation which means that the food data providers are aiming at a moving target to provide the most accurate and authentic data. The latest new 'Indian Food Composition Tables, 2017' provides values with widest possible coverage of nutrient and bioactive components of key foods representing all major food groups. The new Indian food composition tables will provide the much needed data in specialized fields and bring about paradigm change in nutritional research in the country.

# **Identification of key foods, development of national sampling plan and nutrient parameters for generating the Indian food composition tables**

## **1. Introduction**

Food composition tables (FCT) provides data of nutritionally relevant components in foods along with their biophysical descriptions (Dwyer, 1994). FCT is vital for the development of the nutritional sciences and represents the primary scientific resource from which all other nutritional and health studies flow. Earlier, attempts were made to globalize FCT, however, it was found necessary to have national or regional food composition tables as variations in nutritional contents exist due to multiple factors such as genetic variability, agro-climatic conditions, edaphic and processing effects (Vaask et al., 2004). Thus, compilation of FCT specific to a country or region reflects the said variations in the nutritional value of common foods.

Accurate food composition data is critical for those involved in nutrition and epidemiological research and in formulating government policies. Today, the use of FCT goes beyond traditional nutrition science into many specialized areas that were not well-anticipated several years ago. (Deharveng, Charrondiere, Slimani, Southgate, & Riboli, 1999; Dwyer, 1994). Food composition data must contain appropriate details of documentation with respect to the data origin, analytical methods, statistical parameters employed and allied information required by investigators and researchers (Dwyer, 1994). Thus, sound food composition databases that are both comprehensive and representative of foods available and consumed in the country have become essential tools for a multitude of public health activities.

The National Institute of Nutrition (NIN), Hyderabad has generated and maintained the Indian food composition tables (IFCT). The first Indian Food Composition Table entitled ‘Nutritive value of Indian Foods and the Planning of Satisfactory Diet’ was published by Akroyd (1937). Several revisions (Aykroyd, Patwardhan, & Ranganathan, 1951; Aykroyd, Gopalan, & Balasubramanian, 1963, 1966) have taken place since then and the book was renamed ‘Nutritive Value of Indian Foods’ (NVIF) in the subsequent years (Gopalan, Ramasastry, & Balasubramanyam, 1971). The last revision of NVIF was carried out in 1989.

During primordial development of food composition tables, considerable sharing of data took place. The extent of usage of borrowed data was even greater in developing countries. Most FCT carry forward a large proportion of old data derived from outmoded analytical techniques into newer revised versions. In any national FCT there are scientifically reliable data, though it is difficult to assess what proportion and to what extent of the data in the FCTs is accurate. With the

passage of time, due to improvement in analytical techniques and change in the food supply, the proportion of data that are considered to be reliable decreases. Further, keeping in mind the changing scope of the range of nutrients and bioactive substances in foods and their importance in health and disease, generating new data or revising FCT is necessary to cater the needs of the users.

In the previous versions of NVIF several limitations and deficiencies existed including limited coverage of foods, nutritional parameters, and other uncertainties regarding sampling, representativeness, use of outdated analytical methods and data origin etc. In order to address those issues the government of India initiated a program to generate new comprehensive compositional data on nutrient and bioactive substances in foods from nationally representative samples. The frame work that was adopted for identification of key foods, countrywide food sampling design and analytical parameters for the development of Indian food composition database are presented herewith.

## **2. Identification of key foods**

Indian cuisine varies widely across the country according to the region, culture and tradition, characterized by the use of different spices, vegetables, grains, fruits and a variety of animal source foods. Analysing all the foods that are consumed in the country would not be feasible due to the prohibitive cost involved and thus it is essential to prioritize foods for compositional analysis. One method to set priorities is the ‘key foods approach’ developed by the United States Department of Agriculture (USDA) (Haytowitz, Pehrsson, Smith, Gebhardt, Matthews, & Anderson, 1996). Key foods are defined as those foods that contribute upto 75% of the nutrients intake by the population. The method combines food consumption data with its nutrient composition, and ranking the foods by applying a scoring system to identify the key foods that contribute significantly to the diet in terms of their nutrients (Haytowitz, Pehrsson, & Holden, 2000).

Large nationwide dietary surveys provide adequate information on the different foods consumed and the contribution of such foods to the overall nutrient intakes by the population in the country. In India, the National Nutrition Monitoring Bureau (NNMB) has been collecting dietary intake data for the states of Andhra Pradesh, Gujarat, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Tamil Nadu, Uttar Pradesh and West Bengal since 1972. These 10 states cover about 3/4<sup>th</sup> of the geographical area and 2/3<sup>rd</sup> of the total population of the country. Therefore, in order to identify and prioritize the key foods for sampling and analysis, nationwide food consumption survey carried

out by NNMB (NNMB, 2006) in rural areas of India was utilized. Dietary intakes data of 30,244 individuals of all age groups collected using 24 hour dietary recall method (Thimmayamma & Rao, 1969) was utilized.

The method adopted to determine key foods for analysis is the nutrient consumption scoring approach. However, in the present study, the use of nutrients of current or potential health importance as carried out by the USDA (Pehrsson, Haytowitz, Holden, Perry, & Beckler, 2000) is not used; rather contribution of each food to one or more nutrients is taken into consideration. The first step in determining the key foods is based on the consumption pattern of different recipes/foods prepared and used at household level. Food wise ingredients are listed and weighted to represent the amounts consumed by the survey respondents. All the foods that are consumed by the population are considered and their contributions for each nutrient is calculated. The amount of each food consumed is multiplied by the nutrient in the food obtained from NVIF to arrive at the nutrient contribution per food for the amount consumed by the population. Due to limitations of NVIF, intakes of only 12 nutrients namely, protein, total fat, iron, calcium, phosphorus, vitamin A, thiamine, riboflavin, niacin, vitamin C and total folic acid including energy, are taken into consideration. The relative contribution of each food to a particular nutrient is tabulated and sorted in descending order. Similar procedure is adopted for all the 12 nutrients. Finally, foods are sorted out according to score and cumulative percentage is calculated. Foods contributing to maximum number of nutrients in terms of intake are arranged in descending order and a total of 227 mutually exclusive foods are identified as the key foods of the Indian population. Given the relative importance of every key food in the Indian diet, similar sample units are adopted for collection of each food in order to obtain representative analytical data for all these foods.

### *2.1 National food sampling design*

The next step is to provide the best estimate of the nutrient profile of the key foods identified. This involves food sampling, a critical step for generating reliable data representing the composition of the food of interest. The sampling procedure to generate the national food composition database for key foods involves selecting self-weighing, nationally representative estimates of the composition of foods (Pehrsson et al., 2000). To this end, a probability proportional to size national sampling plan is developed to sample the district and analyse the key foods (Cochran, 1977; Chaudhury & Vos, 1988). In India, the population size is not uniform across the States/Union Territories (UTs). Therefore, the number of districts in each State/UT is considered as the basis for fixing the sample size (Census of India, 2001). The country is divided into six broad geographic regions i.e. North,

Central, West, South, East and Northeast India (**Table 1**). Similar categorization of states into regions is done in the National Family Health Surveys (NFHS, 2006) carried out at different time-points. The only exception in this case is the State of Uttar Pradesh which is considered under central region.

**Table 1. Categorization of the States/UTs into six different regions.**

<b>Central</b>	Chhattisgarh; Madhya Pradesh; Uttar Pradesh and Uttarakhand
<b>East</b>	Bihar; Jharkhand; Orissa and West-Bengal
<b>North</b>	Chandigarh; Delhi; Haryana; Himachal Pradesh; Jammu & Kashmir; Punjab and Rajasthan
<b>Northeast</b>	Arunachal Pradesh; Assam; Manipur; Mizoram; Meghalaya; Nagaland; Sikkim and Tripura
<b>South</b>	Andaman & Nicobar Islands; Andhra Pradesh; Karnataka; Kerala; Lakshadweep; Pondicherry; Telangana State and Tamil Nadu
<b>West</b>	Dadra & Nagar Haveli; Diu & Daman; Goa; Gujarat and Maharashtra

The next stage involves categorization of states /UTs according to the frequency distribution of number of districts for determining the number of districts to be sampled within the state of UT (**Table 2**). Only one district is selected from each of the northeast states except Assam and Arunachal Pradesh due to small area and population size. All the States/UTs are categorized into their Natural geographic regions (NGRs) and wherever NGRs are not available, administrative regions of the states/UTs are considered. Once sorted, a probability proportional to the size of districts is drawn using simple random sampling procedure to include one sample (district) from each NGR or Administrative region.

**Table 2. Frequency distribution of States/ UTs for fixing the number of districts to be sampled.**

No. of Districts	No. of States/UTs	No. of districts to be selected from each State/UT	Total No. of districts to be sampled
1-5	9	1	9
6-10	4	2	8
11-20	9	3	27
21-30	7	4	28
31-40	4	5	20
41-50	1	6	6
51-60	0	7	0
61-70	0	8	0
>70	1	9	9
<b>Total</b>	<b>35</b>		<b>107</b>

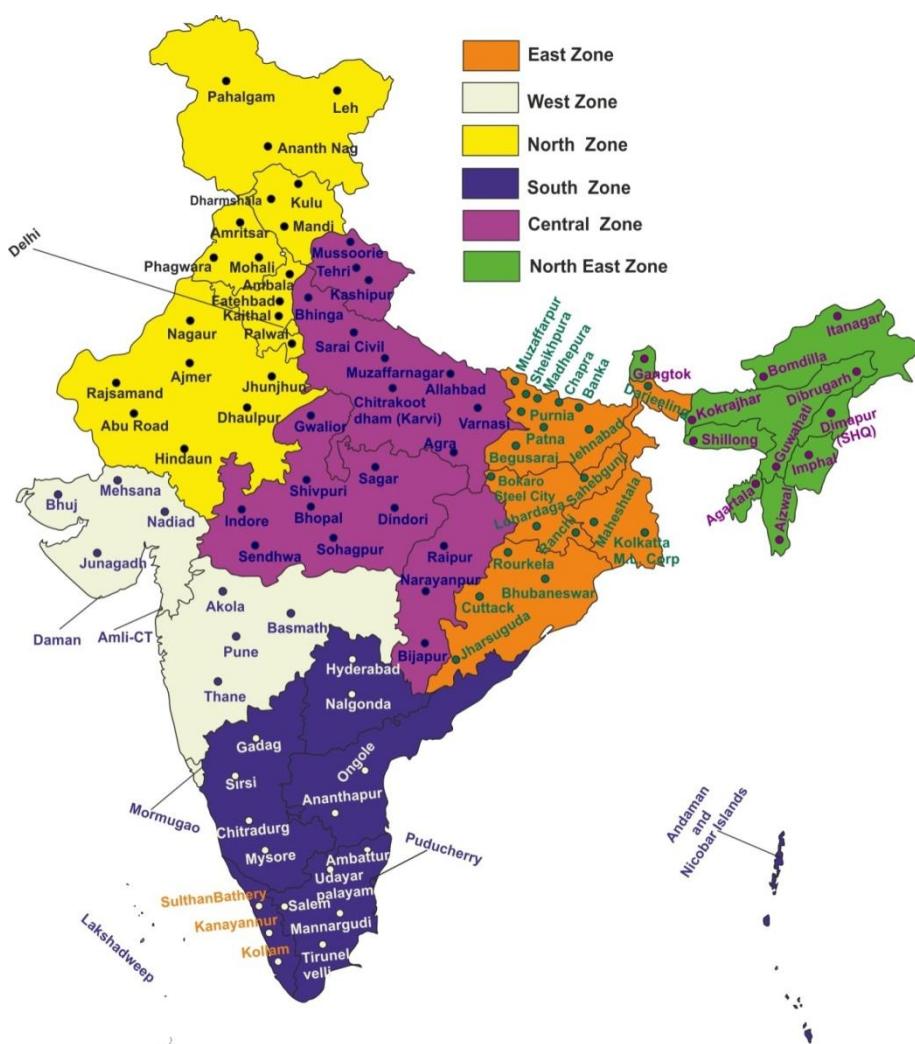

Overall, 107 districts out of the total 630 districts representing 17% of the country are selected for the collection of key foods for analysis (**Map 1**). The number of districts sampled in each state is presented in **Table 3**. Due to logistic reasons, the district headquarters of the selected districts constituted the primary sampling units (PSUs) and retail shops in the main markets of towns constituted the secondary sampling units (SSUs).

The sampling design thus arrived at provides geographically well dispersed districts that are statistically representative with respect to region and country. A centrally located well connected city is identified within each region for region wise collection and compositing of samples (**Table 4**). The sample size varied from a minimum of 11 districts in Northeast India to a maximum of 23 in North India to obtain a comprehensive picture of what is being consumed regionally; through compositing at regional level (**Figure 1**), it was possible to reduce the cost of analysis and still produce the most reliable estimate of nutrient content in food. The sampling design also ensures

adequate number of samples, which takes care of the variables affecting their composition in order to obtain representative data (Greenfield et al., 2009; Tarley, Visentainer, Matsushita, & de Souza, 2004). This sampling plan is considered adequate for each food to express the data through distribution of values, calculation of mean/median, ranges and coefficient of variation taking into account the operational, logistic and perishable nature of the food. The mean of the six regions will represent the national value.

### 2.3 Validation of sampling design

National Bureau of Soil Survey & Land Use Planning (NBSS & LUP) (Velayutham, Mandal, Mandal, & Sehgal, 1999) has mapped twenty agro-ecological zones in the country. When the selected towns were super imposed on the agro-ecological map, it was observed that the spatial distributions of the selected sites were adequately dispersed across all twenty agro-ecological zones in the country indicating adequate representation of the entire country.

**Map – 1. Sample collection centres and zones.**

**Table 3. Number of primary sampling units (districts) in each State/UT.**

Sl. No.	State name	Total No. of Districts	No. of Districts Selected
1	Andhra Pradesh	23	4
2	Arunachal Pradesh	16	2
3	Assam	27	3
4	Bihar	38	9
5	Chhattisgarh	18	3
6	Goa	2	1
7	Gujarat	25	4
8	Haryana	21	4

E	Lakshadweep	1	1
F	National Capital Territory of Delhi	9	2
G	Puducherry	4	1
<b>Total</b>		<b>630</b>	<b>107</b>

#### 2.4 Sample collection, handling and transportation

Sample collection, handling and transportation are critical to ensure integrity of the samples and subsequent accurate estimation of nutrient values (Trainer et al., 2010). The national food sampling plan has a wide geographical dispersion with 107 sampling sites selected according to probability-proportional to size. A systematic protocol was developed for collection and handling of various types of foods in order to optimize the sample integrity and thereby the stability of nutrients at the point of consumption. The

sampling sites are categorised into six regions therefore, food sampling is carried out region-wise.

**Table 4. Regional compositing centres and sample size of each region.**

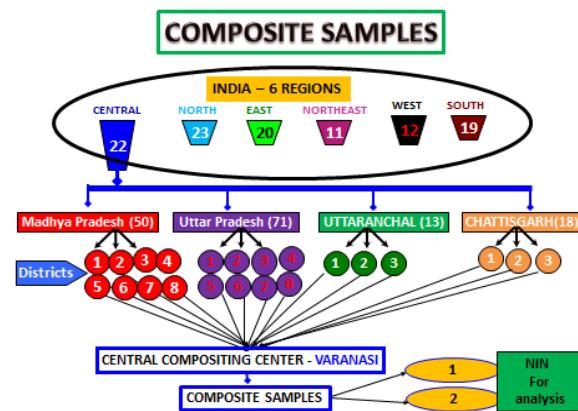

Region	Regional Compositing centre	Sample size
North	Delhi	23
East	Kolkata	20
South	Bangalore	19
West	Mumbai	12
Central	Varanasi	22
North East	Guwahati	11

All plant foods, egg and poultry are continuously sampled in batches from the selected sampling sites in the country (**Figure 1**). Purchase, collection and delivery to the laboratory is staggered to minimise any nutrient loss that may occur prior to analysis. All the samplers are trained in-house and on-site in one district to reduce intra and inter sampler variability and also to gain practical experience in order to ensure consistency in the handling methods such as packaging, storage and transportation. Each food sampler reaches the sampling site with adequate necessary supplies and information on the samples to be collected, method of collection, amount to be sampled, labeling and transportation to the regional compositing centre. Detailed instructions specifically customized for the type of foods to be sampled are given to each food sampler. All samplers are instructed not to sample fresh produce with signs of spoilage or intrinsic damage. The sampling of perishable foods is carried out using coolers and ice packs/dry ice.

Upon reaching the sampling town/city of the particular district, the samplers identify a number of wholesale/big retail shops spread across the city. One wholesale/big retail shop is then selected at random for procuring the food items. If any vegetal food has more than one cultivar available in the market, the sampler is instructed to pick up all the cultivars. In case any specific food item is not available at the primary sampling shop, the samplers are advised to proceed to the next shop to look for the missing items. Sampling perishable food items requires coordination and transportation methods to ensure that foods arrive at the regional compositing centres within a few hours of purchase. Maintaining short duration from sampling point to reaching the compositing centre is critical to preserve food integrity. Therefore, all samplers collect food samples simultaneously from multiple cities in the region and reach the regional compositing centres at an appointed day and time.

Virtually no food material can be analysed in its entirety. Therefore, careful sampling techniques are required to obtain representative samples. All irrelevant extraneous matter is removed from the sample. Edible

portion of the fresh produce are separated out and composite samples of each food are prepared. In case of staple foods like rice and wheat, individual units from every sampling point of the region are collected and analysed individually. Similar varieties of some fruits and vegetables within the species are composited and analysed. Thus, a composite sample is a homogenous mixture of several samples of the same food collected from within the specified regions as per the sampling plan (**Figure 1**). Compositing reduces nutrient variability by increasing the effective sample size. Two aliquots of the composited samples from each of the six regions are transported by air to NIN, Hyderabad. One aliquot is used for analysis while another is stored as reserve sample.

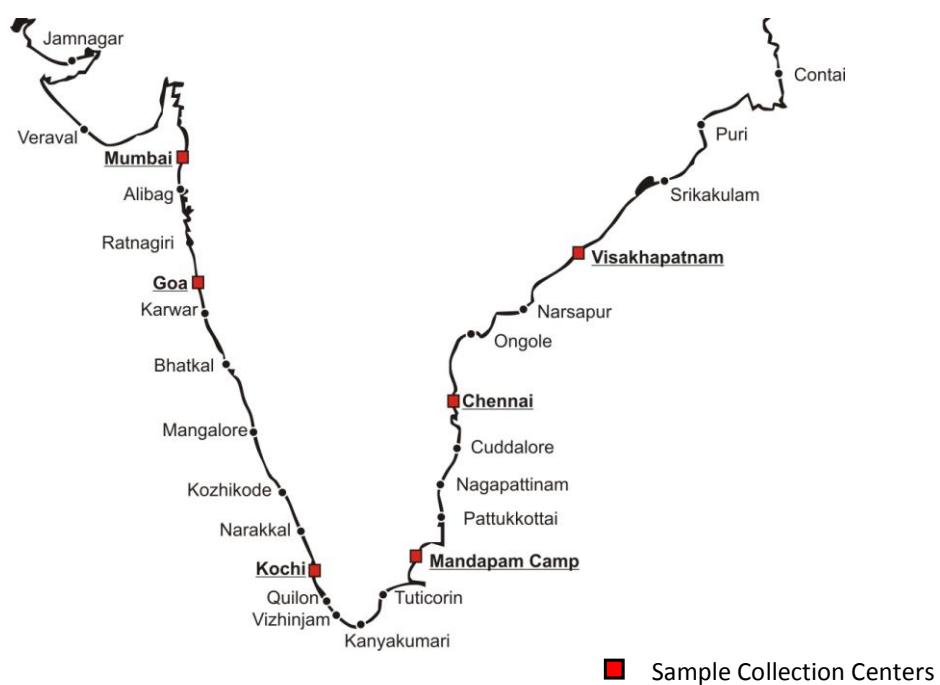

**Figure 1. Overview of food sample compositing at regional centre.**

## 2.5 Sampling plan for 'meat & meat products' and 'inland fish & shellfish'

Due to logistic reasons, all meat and meat products including inland fish are collected from the regional compositing centres only. However, six numbers of each meat sample is collected from six different outlets dispersed spatially across the city. Different meat cuts of all animals including organ meat are collected from every shop. The bone and connective tissues are removed, extra fat is trimmed as per the current practice in the regions and ready-to-cook samples are collected from the butcher. Six samples of each body part or organs collected from every shop are composited. Two aliquots of composited samples are collected, frozen under dry ice and transported by air under frozen condition to NIN for analysis. Similarly for inland fish and shellfish, samples are cleaned, scaled/skinned, eviscerated and deboned at the shop itself and only edible portion is collected from six different outlets. After compositing, the samples are sealed/air lock and frozen under dry ice and transported to NIN for analysis.

## 2.6 Sampling plan of marine fish and shellfish

All marine samples are collected directly from the fish landing ports stratified into east and west coast of the country to capture the variety of marine fish and shellfish consumed in the country. The marine products landing ports identified by the Central Marine Fisheries Research Institute, Cochin is used for sampling the fish and shellfish (**Map 2**).

**Map 2. Fish and other sea food sampling sites.**

Simple random sampling procedure is used to select three sites from the two coastal belts in India for collection of fish and shellfish. The selected sites are Vishakhapatnam, Chennai and Mandapam from east coast belt as well as Mumbai, Goa and Kochi from west coast belt. All varieties of marine fish and shellfish available at the time of sampling at all the six landing sites are collected. All samples are cleaned, scaled/skinned, eviscerated and deboned at the collection site and only edible portion is composited. Two identical composited samples are collected and transported to NIN by air in frozen condition under dry ice, for analysis.

Upon arrival at the laboratory, the samples are checked for sample integrity. Fresh vegetables are expected to arrive at the laboratory cold and fresh in acceptable conditions, while frozen meat or fish samples are to be without any apparent sign of thawing. Any damaged sample was immediately discarded and logged onto the list for collection in the next sampling cycle. Descriptions of all sample handling, processing, and distribution of composite samples for analysis is maintained. Each sample is assigned an alpha numeric code upon arrival at the laboratory and all subsequent analysis and documentation is linked to that number. All samples are stored at appropriate location or at ambient temperature in the laboratory based on the sample perishability.

### 2.7 Analytical parameters

Interest in food components is expanding rapidly and the need to access core data on more nutrients and bioactive substances in foods is far out-stripping the amount of data that is available. Special interest database on emerging bioactive components in foods are necessary to meet the increasing demands of health professionals, dieticians, policy makers, epidemiologist studying the relationships between diet and health, as well as consumer interest in what is in the food they eat. In view of the demand for newer components in foods, it was decided to undertake a comprehensive analysis of nutrients and bioactive components in all key foods.

Official methods of analysis of Association of Official Analytical Chemist (AOAC) or if no AOAC method was available, other appropriate and reliable analytical methods that have undergone collaborative evaluations were tested and adopted. Each method was standardized in the laboratory and validated as per the IUPAC/AOAC method validation procedures with respect to precision, accuracy, simplicity, cost-effective, sensitivity and selectivity. About 200 discrete food constituents including sub-components were standardized for each food in the new food composition database representing proximate principles (8), energy (1), water-soluble vitamins (13), fat soluble vitamins (17), carotenoids (11), individual free sugars (5), oligosaccharides (4), minerals (20), organic acids (8), fats and fatty acids (40), amino acid composition (20), sterols (4), polyphenols (39), and bioactive components

(5) (**Table 5**). All the methods adopted here have been fully scrutinized for their robustness in analysing the compound of interest in different food matrices of different foods types.

### 2.8 Quality assurance and quality control (QAQC) scheme

Analytical Quality Assurance (QA) plan was designed to monitor the performance of the measurement systems to maintain statistical control and provide rapid feedback so that corrective measures could be taken before data quality was compromised. The programme ensures that reported data were sufficiently complete, comparable, representative, unbiased and precise so as to be suitable for their intended use. Certified Reference Material (CRMs) in which one or more properties are well quantified is used for calibration of analytical methods and to ensure data quality. The CRMs are procured from the European Commission Community Bureau of Reference (BCR), Belgium and the National Institute of Standards and Technology (NIST), Gaithersburg, USA.

As far as possible, certified reference materials (CRM) are used in this study, however, due to the prohibitive cost of CRMs, market rice sample is used as in-house quality control material with every batch of analysis. For this, a relatively large amount of the rice was homogenized and kept under controlled conditions. While market rice does not have a certified value, it develops an expected value through repeated analysis. The rationale for the development of control composites is driven by the need for precision and accuracy of data generated for the food samples. Control composites and CRM are included according to the level of validation needed for specific foods and nutrients. Regular participation in external proficiency testing programmes assured quality of the data generated in the laboratory.

## 3. Conclusions

The current national sampling plan addresses the key foods identified in the Indian food supply but does not include food specific to the sub-population of the country. The Indian national food composition database programme was initiated in India in 2011 with the objective of generating and improving the quantity and quality of food composition data in the country. Adequate infrastructure was developed at the National Institute of Nutrition, Hyderabad to meet the analytical requirements for all the components in foods. The identification of key foods, statistically derived sampling plan and analytical parameters described above provide what may be called an ideal plan. This ideal plan involves sampling all key foods identified as important in the Indian dietary supply from geographically dispersed areas across India covering all agro-ecological zones of the country. The ideal plan also includes the analysis of more than 150 analytical

parameters in each food representing six regions of the country to enable region specific nutritional and epidemiological data interpretation. For every food sampled under this design, composite nutrient means are determined for each region and the means of six regions form the country wide average, wherein the

standard deviation provides estimates of the content variability. The ambitious plan could be implemented due to the generous funds received from the Indian Council of Medical Research, Department of Health Research, Government of India, New Delhi.

## General information

The new Indian Food Composition Tables (IFCT) 2017 is the major source of food composition data in India, generated, developed, managed and maintained by the National institute of Nutrition (ICMR), Hyderabad. All data except for poultry and egg pertains to raw food. None of the food sampled for analysis is fortified and it represents only inherent values. The uniqueness of the IFCT is that all nutrient values presented here have been derived from comprehensive national food sampling followed by analysis and contains only analytical data. The data set were carefully scrutinized in detail for consistency and validity, using FAO/INFOODS ‘Guidelines for Checking Food Composition Data prior to Publication of a User Tables/Database – version 1.0 (2012)’.

### 1. Food identification

The Food entity is described by its most common english name, scientific name and photographs of the food sampled for analysis in order to provide as much description as possible. Scientific names consisting of the genus and the species are provided for clarity and to avoid confusion. Foods have been arranged alphabetically by english name for easy identification. The names of foods are also listed in regional official Indian languages namely Assamese, Bengali, Gujarati, Hindi, Kannada, Kashmiri, Konkani, Malayalam, Manipuri, Marathi, Nepali, Oriya, Punjabi, Sanskrit, Telegu and Urdu to make them acquiescent with the local or regional needs. For animal source foods, the specific body part sampled for analysis is also given. Each food tabulated has a unique four character alphanumeric identification code. The alphabetic food character indicates the food group and the numeric character(s) represent a record position within a category. This allows convenient tracking of the data for each food throughout the food composition database.

### 2. Food groups

Foods with common characteristics have been placed together and arranged in groups (**Table1**). Each food group is preceded by text covering points of specific relevance to the foods in that group. All foods have been categorized into 20 food groups and the number in parenthesis indicates the total number of foods present in each group. A total of 528 foods have been analyzed for more than 150 parameters and presented under different nutrient component parameter.

### 3. Information on nutrients

**3.1 Proximate components** include moisture, protein, total fat, ash and carbohydrates. The Difference between 100 and the sum of proximate components including total dietary fibre represents carbohydrate ‘by difference’.

**3.2 Available carbohydrate** is the sum of total free sugars and total starch. Free sugars are individual monosaccharides (galactose, glucose and fructose) and disaccharides (sucrose, lactose and maltose). The values for available carbohydrate have generally been obtained from the sum of individually analyzed values for these components and will differ with figures for carbohydrate ‘by difference’. Available carbohydrates are those which is digested and absorbed, and are glucogenic in human corresponding to the term ‘glycaemic carbohydrates’. For conversion between carbohydrate weights and monosaccharide equivalents, the factors shown in **Table 2** was used.

**3.3 Total dietary fibre (TDF)** is made of complex and heterogeneous polymeric materials such as soluble and insoluble polysaccharides and non-digestible oligosaccharides, as well as a range of non-swellable, more or less hydrophobic compounds such as cutins, suberins and lignins. Currently three different AOAC approved methods for measuring TDF values are available. TDF was analyzed using enzymatic gravimetric method (AOAC 991.43).

**3.4 Protein** values were calculated from the estimated total nitrogen in the food using the Jones (1941) conversion factors (**Table 3**). Protein values for soybean and mushrooms contain considerable non-protein nitrogen (NPN) in several form including urea, purines & pyrimidine. Therefore, NPN was estimated and subtracted from total nitrogen of mushrooms and soybean before multiplying with the Jones factor.

**Table 1. Food groups in the IFCT.**

Code	Food groups	No. of food entries
A	Cereals and Millets	24
B	Grain Legumes	25
C	Green Leafy Vegetables	34
D	Other Vegetables	78
E	Fruits	68
F	Roots and Tubers	19
G	Condiments and Spices	33
H	Nuts and Oil Seeds	21
I	Sugars	2
J	Mushrooms	4
K	Miscellaneous Foods	2
L	Milk and Milk Products	4
M	Egg and Egg Products	15
N	Poultry	19
O	Animal Meat	63
P	Marine Fish	92
Q	Marine Shellfish	8
R	Marine Mollusks	7
S	Fresh Water Fish and Shellfish	10
T	Edible Oils and Fats	14

**Table 2. Conversion of carbohydrate weights to monosaccharide equivalents.**

S. No.	Carbohydrate	Equivalent after Hydrolysis (g/100g)	Conversion to monosaccharide equivalent
1	Monosaccharides e.g. glucose	100	No conversion necessary
2	Disaccharides e.g. sucrose, lactose, maltose	105	x 1.05 or ÷ 0.95
3	Oligosaccharides		
	a. Raffinose (trisaccharide)	107	x 1.07 or ÷ 0.93
	b. Stachyose (tetrasaccharide)	108	x 1.08 or ÷ 0.93
	c. Verbascose (pentasaccharide)	109	x 1.09 or ÷ 0.92
4	Polysaccharides e.g. starch	110	x 1.10 or ÷ 0.90

**Table 3. Jones factors for conversion of nitrogen to protein.**

Food	Conversion Factor
Barley and its Flour; Rye and its flour; Oats	5.83
Rice and its flour	5.95
Wheat whole	5.83
Wheat bran	6.31
Refined wheat flour (Maida)	5.70
Almonds	5.18
Peanuts	5.46
Soybean	5.71
Cashew nuts, pistachio nut,	
Chest nut	5.30
Egg whole	6.25
Meat and Fish	6.25
Milk and milk products	6.38
Sunflower seeds	5.30
Food where specific factor is not listed	6.25

**3.5 Total fat** content of foods is determined by gravimetric methods, including acid hydrolysis and extraction methods using a mixed solvent system of chloroform and methanol. Total fat includes the triglyceride and other lipid components such as glycerol, sterols and phospholipids.

**3.6 Food energy** is expressed in kilojoules (kJ) calculated based on the Atwater system for determining energy values (**Table 4**). The data represent physiologically available energy, which is the energy value remaining after digestive and urinary losses are deducted from gross energy. Food energy in kilojoules (kJ) can be converted using the formula 1 kcal = 4.18 kJ.

**3.7 Minerals and trace elements** included in the table are Aluminium, Arsenic, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Lithium, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Phosphorus, Potassium, Selenium, Sodium and Zinc. Except phosphorus, levels of all minerals and trace elements are determined by atomic absorption spectroscopy (AAS) or inductively coupled plasma

mass spectrometry (ICP-MS). Phosphorus was determined by spectrophotometric method.

**3.8 Thiamin, Riboflavin and Niacin:** Thiamin was determined chemically by the thiochrome procedure and riboflavin by microbiological method. Niacin is determined by microbiological method. The values represent only preformed niacin and do not include the niacin contributed by tryptophan, a niacin precursor. Niacin equivalent applies to the sum of the preformed niacin and the amount that could be derived from tryptophan can be calculated as

$$\text{Niacin equivalents (mg)} = \text{Niacin (mg)} + (\text{Tryptophan, mg} / 60).$$

**3.9 Vitamin C** data include both ascorbic and L-dehydroascorbic acids, as both forms are biologically active, the sum of which is expressed as total ascorbic acid content.

**3.10 Vitamin B6** occurs in foods as pyridoxine, pyridoxal, pyridoxamine and their phosphates which were estimated by HPLC. The sum of all forms represents vitamin B6.

**3.11 Pantothenic acid** in foods was determined by liquid chromatographic methods.

**Table 4. Metabolizable energy conversion factors.**

Component	kJ/g	kcal/g
Protein	17	4
Fat	37	9
Available carbohydrate	17	4
Fibre	8	2
Alcohol	29	7

**3.12 Food folate** values are analyzed using the trienzyme procedure and liquid chromatography. Food folate was expressed as the sum of one or more individual folate vitamers namely 5-methyl tetrahydrofolate, 10-formyl folic acid, 5-formyl tetrahydrofolic acid and tetrahydrofolic acid.

**3.13 Vitamin A** content is expressed as retinol and provitamin A carotenoid. The groups of plant pigments that are precursors of vitamin A are called carotenoids. Individual carotenoids available in the IFCT includes Lutein, zeaxanthin, lycopene,  $\beta$ -cryptoxanthin,  $\alpha$ -carotene,  $\beta$ -carotene,  $\gamma$ -carotene and total carotenoids. The body can utilize these inactive forms once they are converted to the active form, retinol. Vitamin A activity values in Retinol Activity Equivalents (RAE) are calculated from the content of individual carotenoids using appropriate factors. Incidentally, there are many conversion factors for carotenoids and no universal factor exists.

**3.14 Vitamin D** have been reported in the IFCT which is lacking in many food composition databases. Ergocalciferol or vitamin D<sub>2</sub> content in plant foods measured by LC-MS has been reported for the first time in the world. Cholecalciferol or vitamin D<sub>3</sub> in animal source foods including 25 hydroxy-D<sub>3</sub> measured by LC-MS/MS has also been reported. The availability of new analytical vitamin D data in foods will permit dietary intake assessment. Vitamin D<sub>2</sub> (ergocalciferol) made commercially has been reported to have the similar potency in human. Total vitamin D activity has been taken as the sum of vitamin D<sub>3</sub> (cholecalciferol) and five times 25-hydroxy vitamin D<sub>3</sub> (25-hydroxy cholecalciferol), where data are available.

**3.15 Vitamin E** in food is presented as tocopherols and tocotrienols and its isomers. The new Dietary Reference Intake (DRI) for vitamin E (Krinsky, 2000) has stated that with the exception of  $\alpha$ -tocopherol all other individual isomers of tocopherols and tocotrienols do not contribute to vitamin E activity, nevertheless, they are included in the database.

**3.16 Vitamin K** data as phylloquinone in plant foods and menaquinone in animal foods estimated using liquid chromatography are presented in the IFCT.

**3.17 Fatty acid profile** is obtained as the percentage of fatty acid methyl esters determined by gas liquid chromatographic (GLC) analysis. Fatty acids are expressed as the actual quantity of fatty acid in mg per 100g of edible portion of food calculated using Sheppard conversion factor as detailed in Weihrauch et al. (1977). Detailed information on individual fatty acids of each food including values for total saturated, monounsaturated and polyunsaturated fatty acids are reported.

**3.18 Amino acid profile** of each food is determined by three different analyses. Tryptophan is determined by alkaline hydrolysis, methionine and cystine by performic oxidation and the rest of the amino acids by acid hydrolysis. The amino acid profile of each food is expressed as g/100 g protein.

**3.19 Organic acids** is naturally present in a wide

variety of foods especially fruits, berries and vegetables. Organic acids *cis*-aconitic acid, citric acid, fumaric acid, malic acid, quinic acid, succinic acid and tartaric acid were determined in single liquid chromatographic run. Soluble, insoluble and total oxalates were determined separately by HPLC method. The organic acids are energy contributing components, although it varies between the different organic acids. According to the Codex Alimentarius Commission's Guidelines for Nutrition Labeling, the energy conversion factor for organic acids is 13 kJ/g. However, organic acids have not been included in the total energy of foods given in the IFCT.

**3.20 Polyphenols** exhibit highly diverse structures characterized by the presence in their structure of one or several phenolic groups. The recognition of the antioxidant properties of polyphenols, and their probable role in the prevention of various diseases associated with oxidative stress has generated great interest. Polyphenols are found abundantly in our diet and over 500 different molecules are known to be present in foods. The IFCT presents data on 37 individual and total polyphenols present in key Indian foods.

**3.21 Cholesterol** values are generated primarily by gas liquid chromatographic method in foods of animal origin assuming that cholesterol is present only in animal origin foods. Cholesterol values are expressed as mg/100g food. To convert to mmol cholesterol, divide the values by 386.6.

**3.22 Plant sterols** data on campesterol, stigmasterol, and  $\beta$ -sitosterol are obtained by gas-chromatographic procedures and summed to calculate total phytosterols.

**3.23 Oligosaccharides** are indigestible but the beneficial colonic bacteria break them down in the large intestine. In the recent times there is great interest in the health properties of non-digestible oligosaccharides (NDO) as prebiotic compounds. Data on the oligosaccharide content in foods are very meager, making it difficult to assess oligosaccharide consumption of any population in the world. Therefore, content of raffinose, stachyose, verbascose and ajugoes in key Indian foods is presented.

**3.24 Saponins** consist of a polycyclic aglycones attached to one or more sugar side chains and are found in most vegetables, beans and herbs. Saponins were not destroyed by processing or cooking and have many health benefits.

**3.25 Phytate** is commonly known as phytic acid, inositol hexaphosphate and IP-6. It has received considerable attention as anti-nutrient because it binds minerals in the digestive tract, making them less available metabolically to our bodies. However, in the recent years, some novel metabolic effects of phytate

or some of its degradation products have been recognized as antioxidant and may help fight some cancers and other diseases.

#### 4. The expression of nutrient values

All foods are expressed per 100g edible portion. Generally the values have been expressed to a constant number of decimal places for each nutrient. The values of the more variable vitamins or minerals and trace elements have been expressed to less than their usual number of places where greater values render the extra places non-significant.

#### 5. Nutrient identification-Tagnames

A unique abbreviation for a food component developed by International Network of Food Data Systems (INFOODS), have been used to aid in data interchange. Tagnames unambiguously indicate how the nutrient data are obtained indicating the methods of analysis used for the data. In case data was derived by calculation, tagname even indicates the formula used for calculation. INFOODS Tagnames, utilized worldwide, facilitate international data interchange and harmonization.

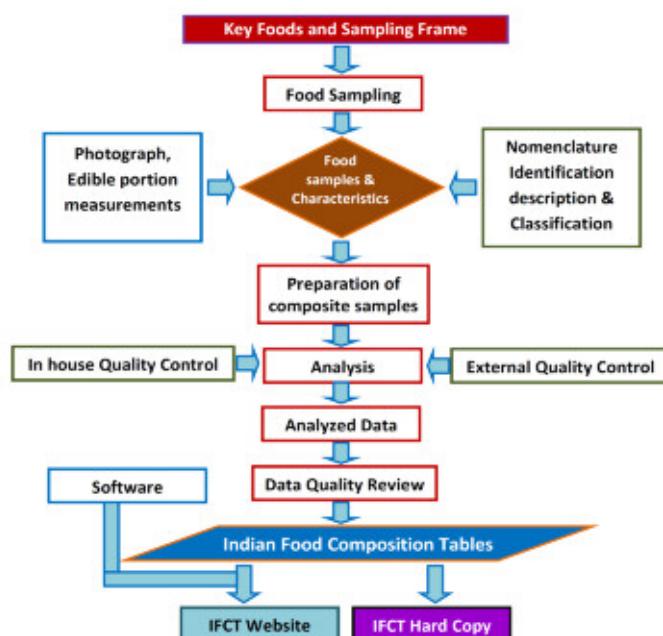

#### 6. Data documentation

The alpha-numeric code provides a unique food identifier within the IFCTs. The foods are sorted alphabetically in the tables. All analytical data scrutinized against quality control data, unit of expression, conversion factors and calculations applied to each nutrient data and accepted after all criteria were met. The metadata was compiled in the archival database which has all the information on the sampling plan, numbers of samples analyzed, analytical methods used and quality assurance procedures in place.

The data presented in this book is the nutrient mean of all six regions representing the country wide value where the standard deviation represents the variation of the particular nutrient. The second type of sample is the individual sample of rice and wheat collected from the 107 sampling sites and analysed individually which increased variability by increasing the effective sample size. Such samples were drawn only for the main staples in the country and not for other foods due to the high cost associated with such analysis. The third type of samples are those of food within the species which were also analysed according to varieties/cultivars for some foods.

The values of six separate regions namely East, Northeast, North, West, South and Central India obtained from compositing adequate number of similar foods collected from within the region was tabulated. The mean value of six regional data was then used to calculate the national value with standard deviation to represent the variation within each nutrient. The mean $\pm$ SD of all nutrients and bioactive components in foods are tabulated to represent the user database or the Indian Food Composition tables (**Figure 1**). All blank spaces in the nutrient tables represents below detectable limit of the particular method used for analysis.

Electronic format allow capturing higher volume of data, easier to update and can reach wider distribution if they are made publicly available. The region specific database is available in the electronic version at the National Institute of Nutrition (NIN). Regional foods may have a different nutrient profile that may differ from national average and hence individuals seeking local specific nutrient data are encouraged to obtain region specific data from NIN.

**A004. Barley** (*Hordeum vulgare*); A. Barli; B. Barley; G. Jav; H. Jau; Kan. Barley; Kash. Wushke; Kh. Krai; Mal. Barley; Mar. Sath; N. Jau; O. Jaba; P. Jao; S. Yava; Tam. Baarli Arisi; Tel. Barley; U. Jau.

**A005. Jowar** (*Sorghum vulgare*); A. Jowar; B. Jowar; G. Jowar; H. Jowar; Kan. Jolada; Kash. Pingu; Kh. Krai; Mal. irunku; Mar. Jondhahlaa; O. Janha; P. Javara; Tam. Chołam; Tel. Jonna; U. Jowar.

**A006. Maize, dry** (*Zea mays*); A. Makoi; B. Bhutta; G. Makai; H. Makka; Kan. Mekke jola; Kash. Makai; Kh. Symbai riewhadem stem; Mal. Maize; M. Chujaak; Mar. Maka; N. Sukha makai; O. Maka; P. Chhali; S. Yaavanaala; Tam. Makka Cholam; Tel. Mokkajonna; U. makai.

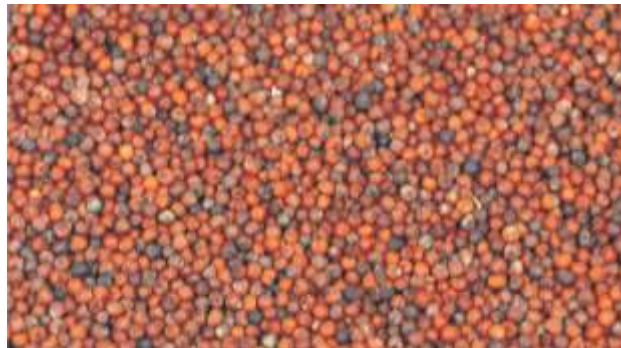

**A007. Maize, tender, local (*Zea mays*)**; A. Makoi; B. Bhutta; G. Lili makai; H. Makka; Kan. Mekke jola; Kash. Makai; Kh. Riewhadem Stem; Mal. Maize; M. Chujaak; Mar. Maka; N. Makai; O. Maka; P. Chhali; Tam. Makka Cholam; Tel. Mokkajonna; U. Makai.

**A008. Maize, tender, sweet (*Zea mays*)**; A. Makoi; B. Bhutta; G. Lili makai; H. Makka; Kan. Mekke jola; Kash. Makai; Kh. Riewhadem lieh; Mal. Maize; M. Chujaak; Mar. Maka; N. Makai; O. Maka; P. Chhali; Tam. Makka Cholam; Tel. Mokkajonna; U. makai.

**A009. Quinoa (*Chenopodium quinoa*)**

**A010. Ragi (*Eleusine coracana*)**; A. Ragi; B. Ragi; G. Bavato; H. Ragi; Kan. Ragi; Kh. Ukrat; Mal. Panjapulle; Mar. Bakri; N. Kodo; O. Mandia; P. Mandal; S. Madhulika; Tam. Kelvaragu; Tel. Ragi; U. Mandwa.

**A011. Rice, flakes (*Oryza sativa*)**; A. Chira; B. Chide; G. Paunva; H. Poha; Kan. Avalakki; Kash. Chevri; Kh. Shira; Mal. Aval; M. Chengpaak; Mar. Pohe; O. Chudaa; P. Chirwre; Tam. Aval; Tel. Atukulu.

**A012. Rice, puffed (*Oryza sativa*)**; A. Muri; B. Muri; G. Mamra; H. Muramure; Kan. Kalle Puri; Kash. Tomul; Kh. Muri; Mal. Pori; M. Kabok Mur; Mar. Chirmure; N. Murai; O. Mudhi; P. Phulian; Tam. Pori; Tel. Maramaralu; U. Murmure.

**A013. Rice, raw, brown (*Oryza sativa*)**; A. Matia rangar chaul; G. Kathai chokha; H. Chawal; P. Bhura choul; Kash. Tomul; Kh. Khaw saw; Mal. Kuthari ; M. Cheng; Tam. Arisi; Tel. Dampudu biyyam.

**A014. Rice, parboiled, milled (*Oryza sativa*)**; A. Ukhua chaul; B. Siddha chowl; G. Bafela Chokha; H. Usna chawal; Kan. Kusubalakki; Kash. Tomul; Kh. Khaw boil; Mal. Puzhngal ari; M. Cheng; Mar. Ukadla tandoor; O. Usuna chaula; P. Biga hua chawal; Tam. Puzhngal arisi; Tel. Uppudu biyyam.

**A015. Rice, raw, milled (*Oryza sativa*)**; A. Milat khunda chaul; B. Chowl; G. Choka; H. Chawal; Kan. Akki; Kash. Tomul; Kh. Khaw boil; M. Cheng; Mar. Tondool; O. Chaula; P. Chaul; Tam. Arisi; Tel. Biyyam.

**A016. Samai (*Panicum miliare*)**; B. Sama; G. Kuri; H. Shavan; Kan. Sama; Kash. Ganuhaar; Mal. Chama; Mar. Sava; O. Suan; P. Swank; Tam. Samai; Tel. Sama.

**A017. Varagu (*Paspalum scrobiculatum*)**; A. Konidhan; B. Kodoadhan; G. Kodra; H. Koden; Kan. Harka; Kash. Snol; Mal. Koovaragu; Mar. Karik; O. Kodus; P. Kodra; Tam. Varagu; Tel. Arikelu.

**A018. Wheat, flour, refined (*Triticum aestivum*)**; A. Moida; B. Maida; G. Maido; H. Maida; Kan. Maida; Kash. Oat; Kh. Moida; Mal. Maida mavu; M. Moida; Mar. Maida; N. Maida; O. Maida; P. Maida; Tam. Maida mavu; Tel. Maida pindi; U. Maida.

**A019. Wheat flour, atta** (*Triticum aestivum*); B. Ata; G. Samagra gha; H. Atta; Kan. Sampurna godhi hittu; Kash. Oat unno lota ghaun no lot; Mal. Godhambu mavu; Mar. Kaneek; O. Gahama atta; P. Atta Tam. Mulu Godumai maavu; Tel. Sampurna godhuma pindi.

**A020. Wheat, whole** (*Triticum aestivum*); A. Ghehu; B. Gom; G. Ghaun; H. Gehun; Kan. Godhi; Kash. Kinek; Kh. Ukew; Mal. Godhumbu; M. Ghehu; Mar. Gehu; N. Gau; O. Gahama; P. Kanak; S. Godhum; Tam. Godumai; Tel. Godhumalu; U. Gehun.

**A021. Wheat, bulgar** (*Triticum aestivum*); A. Dalia; B. Dalia; G. Bulgur ghaum; H. Dalia; Kan. Bulgur godhi; Kash. Kinek; Kh. Kew Mal. Godhambu Rava; Mar. Bulgur gahu; N. Gau ko pitho; O. Dalia; P. Dalia; Tam. Godumai rava; Tel. Bulgur; U. Dalia.

**A022. Wheat, semolina** (*Triticum aestivum*) A. Suji; B. Suji; G. Ghaum soji; H. Gehun suji; Kan. Godhi rave; Kash. Sooj; Kh. Suji; Mal. Uppumavu; M. Suji; Mar. Gahu rava; N. Suji; O. Suji; P. Suji; Tam. Godumai rava; Tel. Godhuma rava.

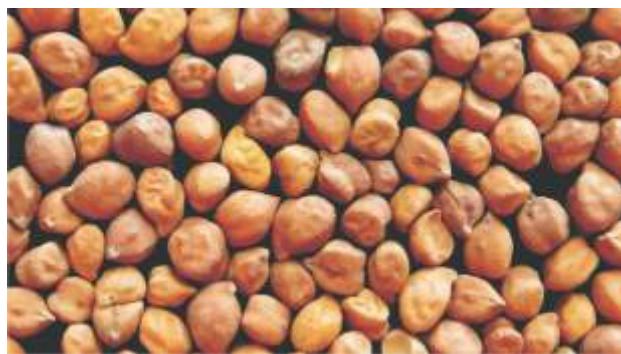

**A023. Wheat, vermicelli** (*Triticum aestivum*); A. Sewai; B. Semai; G. Ghaun ni sev; H. Siwain; Kan. Shevige; Kash. Sewian; Kh. Sewai lieh; Mal. Semiya; Mar. Siwain; O. Simai; P. Sevian; Tam. Semiya; Tel. Semiya; U. Semiya.

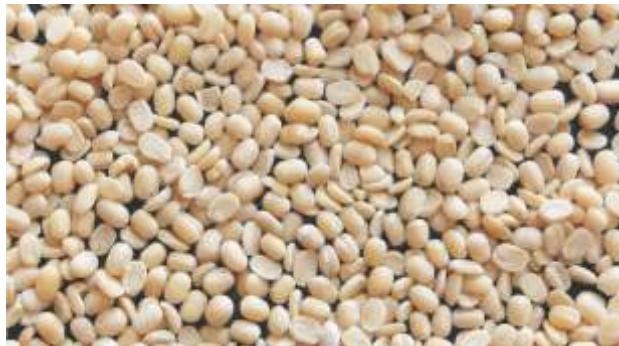

**A024. Wheat, vermicelli, roasted** (*Triticum aestivum*); A. Gom sewai; B. Semai; G. Ghaun ni Shekeli sev; H. Siwain; Kan. Shevige; Kash. Sewian; Kh. Sewai saw; Mal. Semiya; Mar. Siwain; O. Simai; P. Bhooni sevian; Tam. Semiya; Tel. Semiya; U. Semiya.

**B001. Bengal gram, dal** (*Cicer arietinum*); A. Boot dail; B. Cholar dal; G. Chana-ni-daad; H. Chan-ki-dal; Kan. Kadale bele; Kash. Chanu dal; Kh. Dai shana; Mal. Kadala parippu; M. Chana Tangkhai; Mar. Harabara dal; N. Chana ko Dal; O. Channa dali (Buta dali); P. Sholedi dal; Tam. Kadalaiparuppu; Tel. Sanaga papu; U. Chane ki dal.

**B002. Bengal gram, whole** (*Cicer arietinum*); A. Boot; B. Chola; G. Chana; H. Chana; Kan. Kadale; Kash. Chanu; Kh. Shana kulai; Mal. Kadala; Mar. Harbara; M. Chana Mapum; N. Kabuli Chana; O. Buta; P. Shole; S. Chanak; Tam. Kondaikadalai; Tel. Sanagalu; U. Chana.

**B003. Black gram, dal** (*Phaseolus mungo*); A. Matir dail phola; B. Biulir dal; G. Aadad ni daad; H. Urd dal; Kan. Uddhina bele; Kash. Kaha; Mal. Uzhunnu parippu; M. Sagol Hawai Tangkhai; Mar. Uddachi dal; N. Maas ko dal; O. Birri dali; P. Maa ki daal; S. Maassa; Tam. Ulutham paruppu; Tel. Minapappu; U. Mash ki dal.

**B004. Black gram, whole** (*Phaseolus mungo*); A. Gota mati mah; B. Mashkolail; G. Adad; H. Chhilke wali urad dal; Kan. Uddhina bele; Kash. Kaha; Kh. Dai iong; Mal. Uzhunnu; M. Sagol Hawai; Mar. Uddachi dal; O. Birri; P. Sabut maa ki daal; Tam. Ulundhu; Tel. Minumulu. Mapum;

**B005. Cowpea, brown** (*Vigna catjang*); A. Lesera mahor guti; B. Barbat; G. Chorap; H. Lobia; Kan. Alasande; Kh. Rymbai; Mal. Vella payaru; M. Pong Hawai; Mar. Chavli; N. Bodi; O. Jhudunga; P. Lobia; S. Raajamaassa; Tam. Karamani; Tel. Bobbarlu; U. baunir.

**B006. Cowpea, white** (*Vigna catjang*); A. Lesera mahor guti; B. Barbat; G. Chorap; H. Lobia; Kan. Alasande; Kh. Rymbai lieh; Mal. Vella payaru; M. Pong Hawai; Mar. Chavli; N. Bodi; O. Jhudunga; P. Lobia; S. Raajamaassa; Tam. Karamani; Tel. Bobbarlu; U. Baunir.

**B007. Field bean, black** (*Phaseolus vulgaris*); A. Urohi guti; B. Shim; G. Valpapdi; H. Sem; Kan. Avare; Kash. Moang; Kh. Symbai Ri iong; Mal. Avar; Mar. Papta; O. Baragudi; P. Sem dal; Tam. Mochai; Tel. Chikkudu ginjalu.

**B008. Field bean, brown** (*Phaseolus vulgaris*); A. Urohi guti; B. Shim; G. Valpapdi; H. Sem; Kan. Avare; Kash. Moang; Kh. Symbai ri saw; Mal. Avar; Mar. Papta; O. Baragudi; P. Sem dal; Tam. Mochai; Tel. Chikkudu ginjalu.

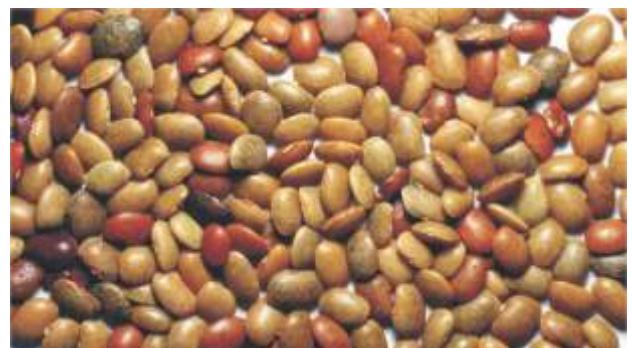

**B009. Field bean, white** (*Phaseolus vulgaris*); A. Urohi guti; B. Shim; G. Valpapdi; H. Sem; Kan. Avare; Kash. Moang; Kh. Symbai Ri lieh; Mal. Avar; Mar. Papta; O. Baragudi; P. Sem dal; Tam. Mochai; Tel. Chikkudu ginjalu.

**B010. Green gram, dal** (*Vigna radiata*); A. Dhua mogu dail; B. Mung dal; G. Mug ni daad; H. Mug dal; Kan. Hesara bele; Kash. Muang dal; Kh. U dai stem; Mal. Cheru payar parippu; M. Mung Hawaii; Mar. Mug dal; N. Moong ko khoste; O. Muga Dali; P. Mungi-di-dal; Tam. Payatham paruppu; Tel. Pesara pappu; U. Moong dal.

**B011. Green gram, whole** (*Vigna radiata*); A. Gota mogu mah; B. Moog; G. Mug; H. Mung; Kan. Hesare kalu; Kash. Muang; Kh. U dai jyrngam; Mal. Cheru Pararu; M. Mung Hawaii; Mar. Mun; N. Moong; O. Muga; P. Sabut moong dal; S. Mudra; Tam. Pasipayir; Tel. Pesalu; U. Moong.

**B012. Horse gram, whole** (*Dolichos biflorus*); B. Kulotto-kalai; G. Kuleeth; H. Kulthi; Kan. Hurule; Kash. Kurath; Mal. Muthira; Mar. Kuleeth; N. Bakulla; O. Kolatha; S. Kulattha; Tam. Kollu; Tel. Ulavalu; U. Kulthi.

**B013. Lentil, dal (*Lens culinaris*)**; A. Masur dail; B. Mosur dal; G. Masoor ni daad; H. Masoor dal; Kan. Laki Bele; Kash. Masoor; Kh. U dai saw; Mal. Vattu parippu; M. Hawai Masuri; Mar. lank dal; N. Musuroo ko dal; O. Masura dali; P. Dhooli masari dal; S. Triputta; Tam. Khesari paruppu; Tel. Lanka pappu.

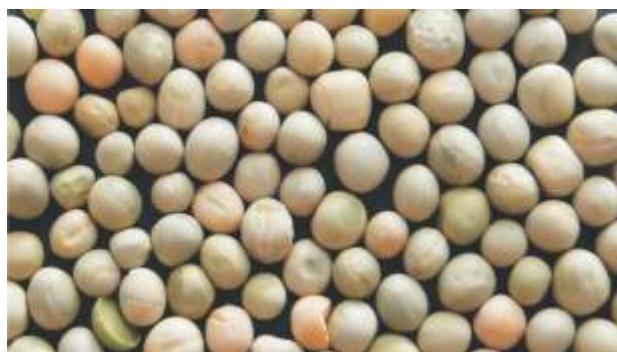

**B014. Lentil whole, brown (*Lens culinaris*)**; A. Gota masur mah; B. Mosur; G. Masoor (Kathai); H. Masur dal; Kan. Masur bele; Kash. Masoor; Kh. U dai saw; Mal. Masur parippu; M. Hawai Masuri; Mar. Masur dal; N. Musuroo; O. Masura; P. Saboot masari dal; S. Masura; Tam. Mysore paruppu; Tel. Misur pappu; U. Masur dal.

**B015. Lentil whole, yellowish (*Lens culinaris*)**; A. Gota masur mah; B. Mosur; G. Masoor (Kathai); H. Masur dal; Kan. Masur bele; Kash. Masoor; Kh. U dai saw; Mal. Masur parippu; M. Hawai Masuri; Mar. Masur dal; N. Musuroo; O. Masura; P. Saboot masari dal; S. Masura; Tam. Mysore paruppu; Tel. Misur pappu; U. Masur dal.

**B016. Moth bean (*Vigna aconitifolia*)**; H. Motha; Tam. Narippayir; Kan. Matki Kal; Mar. Matki; B. Kheri; G.Math; P. Moth dal; Kh. Rymbai.

**B017. Peas, dry (*Pisum sativum*)**; A. Gota motor; B. Matar; G. Sukha vatana; H. Sukhi Matar; Kan. Batani; Kash. Kaza; Kh. Shana mator; Mal. Pattani; M. Hawai mangal; O. Matara; P. Sukhe hare matar; Tam. Pattani; Tel. Batani.

**B018. Rajmah, black (*Phaseolus vulgaris*)**; A. Rajmah; B. Barbati beej; G. Phansi (Kadi); H. Rajmah; Kan. Thugare bele; Kash. Razma; Kh. Rajma heh; Mal. Rajmah; M. Rajmah; Mar. Shravangheveda; N. Rajma; P. Kale rajmah; S. Makussttaka; Tam. Karamani Payir; Tel. Barigalu; U. Rajma.

**B019. Rajmah, brown** (*Phaseolus vulgaris*); A. Rajmah; B. Barbati beej; G. Phansi (Gulabi); H. Rajmah; Kan. Thugare bele; Kash. Razma; Kh. Rajma lieh; Mal. Rajmah; M. Rajmah; Mar. Shravangheveda; N. Rajma; P. Bhoore rajmah; S. Makussttaka; Tam. Karamani Payir; Tel. Barigalu; U. Rajma.

**B020. Rajmah, red** (*Phaseolus vulgaris*); A. Rajmah; B. Barbati beej; G. Phansi (lal); H. Rajmah; Kan. Thugare bele; Kash. Razma; Kh. Rajma rit; Mal. Rajmah; M. Rajmah; Mar. Shravangheveda; N. Rajma; P. Lal rajmah; S. Makussttaka; Tam. Karamani Payir; Tel. Barigalu; U. Rajma.

**B021. Red gram, dal** (*Cajanus cajan*); A. Rohor dail; B., Kash., H. Arhar dal; G. Tuver ni daad; Kan. Thugare bele; Kash. Arhar; Kh. Dai shana; Mal. Tuvaru parippu; M. Mairongbi; Mar. Turdal; N. Rahar ko dal; O. Harada dal; P. Arhar dal; S. Aaddhakii; Tel. Kandi pappu; Tam. Tuvaram paruppu; U. Tuvar ki dal.

**B022. Red gram, whole** (*Cajanus cajan*); A. Gota rohor; G. Tuver; H. Arhar sabud; Kash. Arhar; Kh. Rymbai ja; Mal. Tuvaru parippu; M. Mairongbi; Mar. Turdal; O. Harada; P. Arhar sabut dal; Tam. Tuvarai; Tel. Kandulu; U. Tuvar.

**B023. Rice Bean** (*Vigna umbellata*); B. Galmoong; H. Meth; Kh. Rymbai ja; Mal. Kattuzhunnu; M. Chakwai ; N. Shiltong.

**B024. Soybean, brown** (*Glycine max*); A. Soya bean; B. Garikalai; G. Soya bean; H. Bhatmas; Kan. Soya bean; Kash. Muth; Kh. Toh rymbai; Mal. Soya bean; M. Nunghawai; Mar. Soya bean; N. Bhatmas; O. Soya bean; P. Soya bean dal; Tam. Soya bean; Tel. Soya bean; U. Soya.

**B025. Soybean, white (*Glycine max*)**; A. Soya bean; B. Garikalai; G. Soya bean; H. Bhatmas; Kan. Soya bean; Kash. Muth; Kh. Toh rymbai; Mal. Soya bean; M. Nunghawai; Mar. Soya bean; N. Bhatmas; O. Soya bean; P. Soya bean dal; Tel. Soya bean; Tam. Soya bean; U. Soya.

**C001. Agathi leaves (*Sesbania grandiflora*)**; A. Bok phular paat; B. Bak ful shak; G. Agathio; H. Agasthi; Kan. Agase soppu; Mal. Agathi cheera; M. Chu chu Rangmei; Mar. Agasthi ka sag; O. Agasti; Tam. Agathi keerai; Tel. Avise akulu.

**C002. Amaranth leaves, green (*Amaranthus gangeticus*)**; A. Moricha sak; B. Notya Shaakh; G. Taldalja ni bhaaji; H. Chaulai; Kan. Danthu; Kash. Mawal; Mal. Cheera; M. Chengkruk; Mar. Math; N. Latte to saag; O. Neutia sag; P. Chaulai sag; S. Maarissa; Tam. Thandu keerai; Tel. Thotakoora; U. Cholai.

**C003. Amaranth leaves, red (*Amaranthus gangeticus*)**; A. Moricha; B. Lal Shaakh; G. Lal tandaljo; H. Chaulai; Kan. Danthu; Kash. Mawal; Mal. Cheera; M. Chengkruk; Mar. Math; N. Latte to saag; O. Neutia sag; P. Lal chaulai sag; S. Maarissa; Tel. Thotakoora; Tam. Thandu keerai; U. Cholai.

**C004. Amaranth leaves, red and green mix (*Amaranthus gangeticus*)**; A. Moricha sak; B. Notya Shaakh; G. Tandaljo H. Chaulai; Kan. Danthu; Kash. Mawal; Mal. Cheera; M. Chengkruk; Mar. Math; N. Latte to saag; O. Neutia sag; P. Chaulai sag; S. Maarissa; Tam. Thandu keerai; Tel. Thotakoora; U. Cholai.

**C005. Amaranth, spined, leaves, green (*Amaranthus spinosus*)**; A. Moricha sak; B. Kanta-notya; G. Kanta vado tandaljo; H. Kantewali-notya; Kan. Mulla danthu; Kash. Mawal; Mal. Mullancheru- cheera; M. Chengkruk; Mar. Kantemanth; O. Kanta notay shak; P. Kantewali chaulai; Tam. Mulaikeerai; Tel. Mulla thotakura.

**C006. Amaranth, spined, leaves, red and green** (*Amaranth spinosus*); A. Kanta-notya shaak; G. Kanta vado tandaljo; H. Kantewali-notya; Kan. Mulla danthu; Kash. Mawal; Kh. Sla longmar; Mal. Mullancheru-cheera; M. Chengkruk; Mar. Kantemanth; O. Kanta neutia sag; P. Kantewali chaulai; Tam. Mulakeerai; Tel. Mulla thotakura.

**C007. Basella, leaves** (*Basella alba*); A. Puroi sak; B. Pui shaak; G. Poi ni bhaji; H. Poi; Kan. Basale soppu; Kh. Sla palong dkhar; Mal. Vallicheera; Mar. Mayalu; O. Poi saaga; P. Poi; Tam. Kodippasali; Tel. Bachhali.

**C008. Bathua leaves** (*Chenopodium album*.); A. Jilmil sak; B. Beto sak; G. Chilni bhaji; H. Bathua sag; Kan. Sakothina soppu; Kash. Ushtahak; Kh. Sla jada; Mal. Parippuchira; M. Monsaobi; Mar. Chakavath; N. Bethe ko saag; O. Bathua sag; P. Bathu sag; Tel. Pappukura; Tam. Paruppukkeerai.

**C009. Beet greens** (*Beta vulgaris*); A. Beetar sak; G. Beet ni bhaji; H. Chukandhar sag; Kan. Beet root soppu; Kash. Chogander Munji; Kh. Sla bit; Mal. Beet root cheera; Mar. Beet root ka sag; N. Bengali Palungo ko Saag; P. Chukandhar da sag; Tam. Beet root keerai; Tel. Beet root; U. beet patta.

**C010. Betel, leaves, big (Kolkata)** (*Piper betle*); A. paan; B. Pan; G. Nagarvelna pan; H. Pan ka patha; Kan. Kadale soppu; Kh. Tympew Dkhar; Mal. Vettilai; M. Kwa Mana; Mar. Pan-ka-patta; O. Pana; P. Pan-da-patta; Tam. Vetrilai; Tel. Thamala paku; U. Paan ka patta.

**C011. Betel, leaves, small** (*Piper betle*); A. Paan; B. Pan; G. Nagarvelna pan; H. Pan ka patha; Kan. Kadale soppu; Kh. Tympew; Mal. Vettilai; M. Kwa Mana; Mar. Pan-ka-patta; O. Pana; P. Pan-da-patta; Tel. Thamala paku; Tam. Vetrilai; U. Paan ka patta.

**C012. Brussels sprouts** (*Brassica oleracea* var. *gemmifera*); A. Biliti Bandhakopi; B. Nani kobi; C. Choote gobi; D. Kan. Mara kosu; E. Kash. Haakh; F. Mal. Kalakose; G. Mar. Chotee gobi; H. O. Chota bandha; I. P. Chooti band gobi; J. Tam. Kalaikose; K. Tel. Chinna cabbage; L. U. Choti bund gobh.

**C013. Cabbage, Chinese** (*Brassica rupa*) A. China lai; B. Chinese kobi; C. Kash. Bandh; D. Kh. Salat chaina.

**C014. Cabbage, collard greens** (*Brassica oleracea* var. *viridis*); A. G. Kobi na pan; B. Kash. Bandh; C. Kh. Sla kubi; D. Tam. Seemai parattai keerai.

**C015. Cabbage, green** (*Brassica oleracea* var. *capitata f. alba*); A. Bondhakobi; B. Badha kopi; C. Lili kobi; D. Bandh gobi; E. Kan. Kosu; F. Kash. Bandh gobi; G. Kh. Kubi; H. Mal. Muttu gose; I. M. Kobi Mana; J. Mar. Kobi; K. N. Banda kovi; L. O. Bandha kobi; M. Patta gobhi; N. Shaakaprabhedah; O. Tel. Gos koora; P. Tam. Muttaikose; Q. U. Gobhi.

**C016. Cabbage, violet** (*Brassica oleracea* var. *capitata f. rubra*); A. Bondhakobi; B. Badha kopi; C. Lal kobi; D. Bandh gobi; E. Kan. Kosu; F. Kash. Bandh gobi; G. Kh. Kubi saw; H. Mal. Muttu gose; I. Mar. Kobi; J. N. Banda kovi; K. O. Bandha kopee; L. P. Patta gobhi; M. Shaakaprabhedah; N. Tam. Muttaikose; O. Tel. Gos koora; P. U. Gobhi.

**C017. Cauliflower leaves** (*Brassica oleracea* var. *botrytis*); A. Phul kobil pat; B. Phul gopi pata; C. Fulawar na pan; D. Phul gobi patta; E. Kan. Hukosu; F. Kash. Phoolgobi panwathir; G. Kh. Sla phul; H. Mal. Cauliflower ila; I. M. Kobithamchetmai mana; J. Mar. Phul gobi; K. N. Kauli; L. O. Phula Kobi patra; M. P. Phool gobi di patte; N. S. Gojihvaa; O. Tam. Pookosu keerai; P. Tel. Go puvvu; Q. Phul gobi.

**C018. Colocasia, leaves, green (*Colocasia esculenta*);** A. Kasu sak; B. Kochu pata; G. Advi na pan; H. Arvi ka sag; Kan. Shamangadda yele; Kh. Sla wang; Mal. Chembu ilagal; M. Paan mana; Mar. Alu pan; N. Karkalo; O. Saru saga; P. Arbi-di-patte; Tam. Seppam ilaigal; Tel. Chama akulu; U. Arvi ka patta.

**C019. Drumstick, leaves (*Moringa oleifera*);** A. Sajina paat; B. Sajna pata; G. Saragwa na pan; H. Sajan patta; Kan. Nuggeyele; Mal. Muringa ela; M. Sajana mana; Mar. Shevaga pan; O. Sajna sag; P. Soanjhna da patta; Tam. Murungai keerai; Tel. Mulaga akulu; U. Sujineki palli.

**C020. Fenugreek leaves (*Trigonella foenum-graecum*);** A. Methi paat; B. Methi shak; G. Methi pandada; H. Methi sag; Kan. Mentyha soppu; Kash. Kasori Methi; Kh. Sla methi; Mal. Uluva ila; M. Methi man; Mar. Methi sag; N. Methi pata; O. Methi sag; P. Methi di patte; Tel. Menthikoora; Tam. Vendhaiya keerai; U. Methi.

**C021. Garden cress (*Lepidium sativum*);** A. Bor manimuni; B. Halim sag; G. Asadio na pan; H. Halim ka patta; Kan. Allibija soppu; Kash. Halyun; Kh. Khliang syiar; Mal. Alivirai cheera; Mar. Ahiva ka patta; N. Chamsoor ko Saag; O. Kakharu Saga; P. Halim-da-sag; Tam. Alivirai keerai; Tel. Adityala akulu.

**C022. Gogu leaves, green stem (*Hibiscus cannabinus*);** A. Tengamora; B. Mestapat; G. Ambadi; H. Pitwa; Kan. Pundi; Kh. Sla jajew jyngam; Mal. Pulichai cheera; M. Sougri mana; Mar. Ambadi; O. Nalite saga; P. Pitwa sag; Tam. Pulichchai keerai; Tel. Gongura; U. Ambada ki bhaji.

**C023. Gogu leaves, red stem (*Hibiscus cannabinus*);** A. Tengamora; B. Mestapat; G. Ambadi; H. Pitwa; Kan. Pundi; Kh. Sla jajew saw; Mal. Pulichai cheera; M. Sougri mana; Mar. Ambadi; O. Nalite saga; P. Pitwa sag; Tam. Pulichchai keerai; Tel. Gongura; U. Ambada ki bhaji.

**C024. Knol-Khol, leaves** (*Brassica oleracea* var. *gongylodes*); A. Ool kobi; B. Olkopi sag; G. Gath kobi na pan; H. Ganth gobi ka sag; Kan. Gedde kosu; Kash. Hakh Monji; Kh. Phan Kubi; Mal. Knol-khol cheera; M. Kobi Maru Kabi; Mar. Nol khol ka patta; N. Gyathkopi ko saag; O. Ulgobi saga; P. Ganth gobi sag; Tam. Knol-Khol keerai; Tel. Knol-khol akulu.

**C025. Lettuce** (*Lactuca sativa*); A. Salad paat; G. Lettuce na pan; H. Salad ka patta; Kan. Lettuce soppu; Kash. Hakh; Kh. Salat dkhar; Mal. Lettuce cheera; Mar. Lettuce ka patta; N. Saalad ko paat; P. Salad da sag; Tam. Ilaikosu; Tel. Kavu akulu; U. Kismisaag.

**C026. Mustard, leaves** (*Brassica juncea*); A. Horiyo paat; B. Sorisa sag; G. Sarasava pandada; H. Sarson ka sag; Kan. Sasuve yele; Kash. Hakh; Kh. Tyrso; Mal. Kadugu ila; M. Hangaam; Mar. Mochari-chi pan; N. Raayo ko Saag; O. Sarson ka saga; P. Saro da sag; Tam. Kadugu ilai; Tel. Ava akulu; U. Sarson ki patta.

**C027. Pak Choi leaves** (*Brassica rapa* var. *chinensis*) G. Pak choi na pan.

**C028. Parsley** (*Petroselinum crispum*); A. Sugandhi lota; G. Leela dhana; Mal. Seema malli; Mar. Kothimbir/dhane Tam. Verkosu; Kan. Auchumooda; ; U. Ajmod; P. Parsley.

**C029. Ponnaganni** (*Alternanthera sessilis*); A. Matikaduri; B. Khanchari; G. Saranthi na pan; H. Saranthi sag; Kan. Honagone soppu; Mal. Ponnaganni cheera; M. Phakchet; Mar. Saranthi sag; O. Madarangh; Tam. Ponnaganni keerai; Tel. Ponnaganti koora; U. Kunte ki bhaji.

**C030. Pumpkin leaves, tender (*Cucurbit maxima*)**; A. Rongalao paat; B. Kumra shak; G. Kolam na pan; H. Kumhra sag; Kan. Kumbale soppu; Kash. Aal kaniji; Kh. Sla pathaw; Mal. Manthan elakai; M. Mairen mana; Mar. Bhopla chipan; O. Khakaru saga; P. Petha de pate; Tel. Gummadi akulu; Tam. Parangi ilai; U. Kaddu ka patta.

**C031. Radish leaves (*Raphanus sativus*)**; A. Dherua; B. Mulo shak; G. Muda na pan; H. Muli ka sag; Kan. Mullangi soppu; Kash. Mooji Hakh; Kh. Sla muli; Mal. Mullangi ilaigal; M. Hangham mula; Mar. Mula ka sag; N. Moolaa ko saag; O. Mula ka sag; P. Muli di patte; Tel. Mullangi akulu; Tam. Mullangi ilai; U. Muli ka patta.

**C032. Rumex leaves (*Rumex patientia*)**; A. Suka sak; B. Bun palung; G. Ambada (sorrel); Kan. Chukki soppu; Mar. Amlavetasa; S. Amlavetasa; U. Tukhm hummaz.

**C033. Spinach (*Spinacia oleracea*)**; A. Paleng; B. Palong shak; G. Palak ni bhaji; H. Palak; Kan. Spinak soppu; Kash. Palak; Kh. Palong heh; Mal. Basala cheera; M. Palak; Mar. Palak; N. Paalungo ko Saag; O. Palang sag; P. Palak; S. Paalakya; Tam. Pasalai keerai; Tel. Palakoora; U. Palak.

**C034. Tamarind leaves, tender (*Tamarindus indica*)**; B. Tetul pata; G. Amli na pan; H., P. Imli patte; K. Hunise chiguru; Mal., Tam. Puliam ilaigal; Mar. Chinchecha pala; O. Tentuli; Tel. Chinta chiguru; A. Teteli paat; M. Mange Mana; Kh. Sla sohkyntoi.

**D001. Ash gourd (*Benincasa hispida*)**; A. Kumura; B. Chalkumra; G. Bhuru kodu; H. Petha; Kan. Budagumbala; Kash. Aal; Kh. Pathaw iiwbih; Mal. Kumbalanga; M. Torbot; Mar. Kohala; N. Kubhindo; O. Panikakharu; P. Petha; Tam. Venpoosani; Tel. Boodida gummadi; U. Peta.

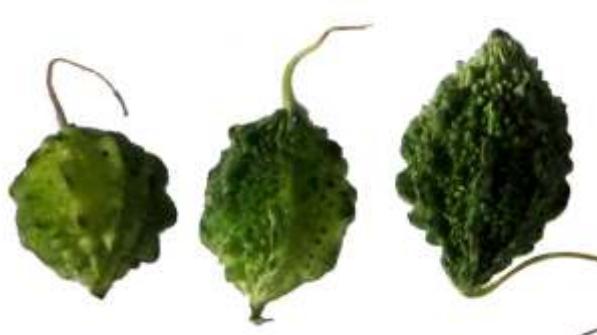

**D002. Bamboo shoot, tender (*Bambusa vulgaris*); A. Bahgaj; B. Bansber ankur; G. Lilo vans; H. Baans; Kan. Baimbale, Kanile; Kh. Ka lung siej; Mal. Mulankoombu; M. Soidon; Mar. Kalkipan; O. Bhet ki lakdi; P. Baans; Tam. Moongil kuruthu; Tel. Veduru chiguru; U. Bhet ki lakdi.**

**D003. Bean scarlet, tender (*Phaseolus coccineus*); A. Lesera mah; G. Chodi; H. Sem; Kash. Hyambi; Kh. U buri; M. Hawai Ashaangbi; P. Sem fali.**

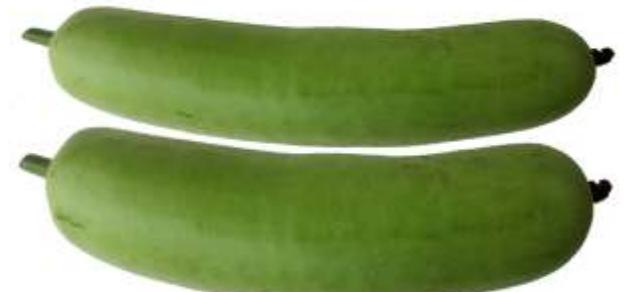

**D004. Bitter gourd, jagged, teeth ridges, elongate (*Momordica charantia*); A. Kerela; B. Korola; G. Karela; H. Karela; Kan. Hagal kai; Kash. Karela; Kh. Kerela heh; Mal. Kaippakka; M. Karon Akhabi; Mar. Karle ; N. Tite karela; O. Kalara; P. Karela; S. Tillikaa; Tel. Kakara kaya; Tam. Paavakkai; U. Karela.**

**D005. Bitter gourd, jagged, teeth ridges, short (*Momordica charantia*); A. Kerela; B. Uchhe; G. Marela; H. Karela; Kan. Hagal kai; Kash. Karela; Kh. Kerela rit Mal. Kaippakka; M. Karon Akhabi; Mar. Karle; N. Tite karela; O. Kalara; P. Karela; S. Tillikaa; Tam. Paavakkai; Tel. Kakara kaya; U. Karela.**

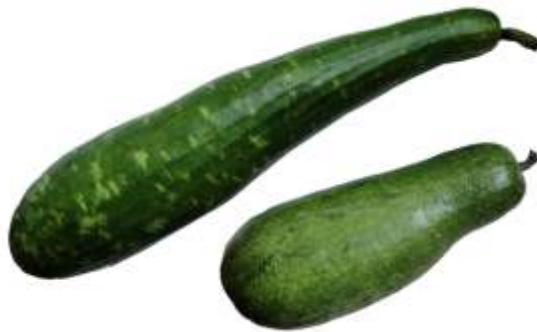

**D006. Bitter gourd, jagged, smooth ridges, elongate (*Momordica charantia*); A. Kerela; B. Korola; G. Karela; H. Karela; Kan. Hagal kai; Kash. Karela; Kh. Kerela; Mal. Kaippakka; M. **D030. Brinjal 21** (*Solanum melongena*); A. Bengena; B. Begun; G. Ringna; H. Baingan; Kan. Badane; Kash. Wagun; Kh. Sohbaingon jyrngam; Mal. Vazhuthiniga; M. Lam Khamen; Mar. Vange; N. Bhantaa; O. Baigan; P. Baigan; S. Vruntaakam; Tam. Kathirikkai; Tel. Vañkaya; U. Baigan.

**D032. Broad beans** (*Vicia faba*); A. Urahi; B. Makhon shim; G. Fafda papdi; H. Bakla; Kan. Chkaooradavare; Kash. Thool Haymbe; Kh. Ri majai; Mal. Amarakka; Mar. Ghewda; O. Simba; Tam. Avarai; Tel. Pedda chikkudu.

**D033. Capsicum, green** (*Capsicum annuum*); A. Kashmiri jalakia; B. Lanka (bilathi); G. Bhuler marcha; H. Shimla mirch; Kan. Donnmena-sinakayi; Kash. Shimla marchwangan; Kh. Sohmynken jhur jyrngam; Mal. Undamulagu; Mar. Bhoplimirchi; O. Shimla Lanka; P. Shimle-di-mirchi; Tam. Koda milagai; Tel. Shimla mirchi; U. Shimla mirchi.

**D034. Capsicum, red** (*Capsicum annuum*); A. Kashmiri jalakia; B. Lanka (bilathi); G. Bhuler marcha; H. Shimla mirch; Kan. Donnmena- sinakayi; Kash. Shimla marchwangan; Kh. Sohmynken jhur jyrngam; Mal. Undamulagu; Mar. Bhoplimirchi; O. Shimla Lanka; P. Shimle-di-mirchi; Tam. Koda milagai; Tel. Shimla mirchi; U. Shimla mirchi.

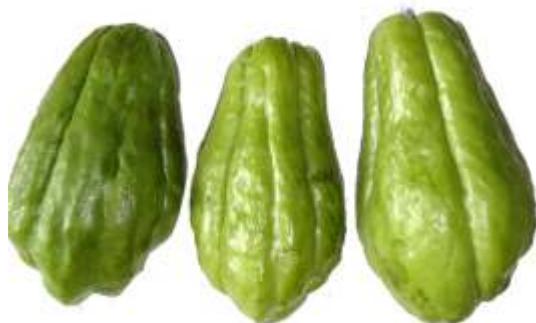

**D035. Capsicum, yellow** (*Capsicum annuum*) A. Kashmiri jalakia; B. Lanka (bilathi); G. Bhuler marcha; H. Shimla mirch; Kan. Donnmena-sinakayi; Kash. Shimla marchwangan; Kh. Sohmynken jhur stem; Mal. Undamulagu; Mar. Bhoplimirchi; O. Shimla Lanka; P. Shimle-di-mirchi; Tam. Koda milagai; Tel. Shimla mirchi; U. Shimla mirchi.

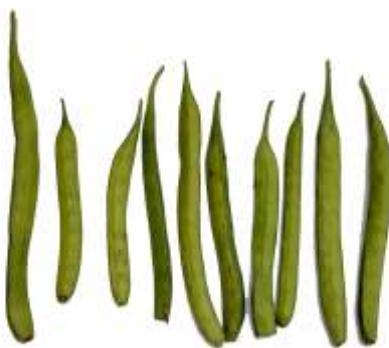

**D036. Cauliflower** (*Brassica oleracea* var. *botrytis*); A. Phul kobi; B. Phul kopi; G. Fulawar; H. Phul gobi; Kan. Hukosu; Kash. Phoolgobi; Kh. Phul kubi; Mal. Cauliflower; M. Kobithamchetmai; Mar. Phul gobi; N. Kauli; O. Phul Kobi; P. Phul gobi; S. Gojihvaa; Tam. Pookosu; Tel. Go puvvu; U. Phul gobi.

**D037. Celery stalk** (*Apium graveolens*); B. Randhuni; H. Ajmud; Kh. Dieng seleri; G. Celery daandi; Tam. Sivarikkeerai.

**D038. Cho-cho-marrow** (*Sechium edule*); A. Squash; H. Cho-cho-marrow; Kan. Cho-cho-marrow; M. Dasakusa; Mal. Cho-cho-marrow; Mar. Cho cho sara; O. Phuti kakudi; Kh. Biskot; Tam. Chow-chow.

**D039. Cluster beans (*Cyamopsis tetragonoloba*);** A. Mah; B. Jhar sim; G. Govar; H. Gaur-ki-phalli; Kan. Gori koyi; Kash. Hyambi; Mal. Kothavara; Mar. Govari; O. Guanra chhuin; P. Guarae-di-faliya; Tam. Kothavaranga; Tel. Goruchikkudu; U. Gavar ki palli.

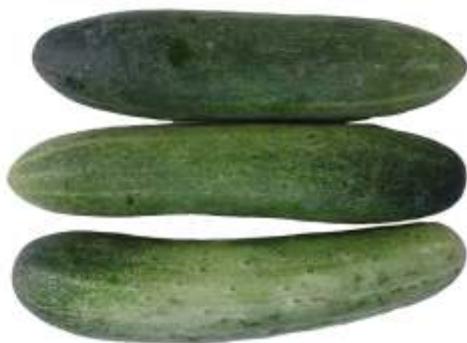

**D040. Colocasia, stem, black (*Colocasia esculenta*);** A. kosu thari; B. Kochur loti; H. Arwi-ki-dandi; Kan. Kesu danthu; Kh. Kawang iong; Mal. Chembin thandu; M. Paan Makhok; Mar. Alu-che-dath; O. Sarunada; P. Arbi de dande; Tam. Seppanthandu; Tel. Chama kada; U. Arwi ke kade.

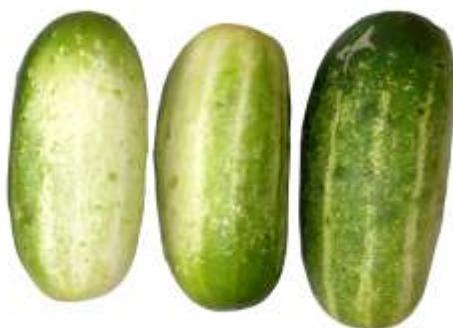

**D041. Colocasia stem, green (*Colocasia esculenta*);** A. Kosu thari; B. Kochur loti; H. Arwi-ki-dandi; Kan. Kesu danthu; Kh. Ka wang jyrngam; Mal. Chembin thandu; M. Paan Makhok; Mar. Alu-che-dath; O. Sarunada; P. Arbi de dande; Tam. Seppanthandu; Tel. Chama kada; U. Arwi ke kade.

**D042. Corn, baby (*Zea mays*);** Kash. Makai; Kh. Riewhadem lung; M. Chujaak; P. Shoti shalli.

**D043. Cucumber green, elongated (*Cucumis sativus*);** A. Tiyoh; B. Sosha; G. Kakdi; H. Kheera; Kan. Southe kayi; Kash. Laar; Kh. Sokhia; Mal. Vellarikka; M. Thabi; Mar. Kakadi; N. Kakro; O. Kakudi; P. Khira; S. Patolah; Tam. Vellarikkai; Tel. Dosa kaya; U. Kheera.

**D044. Cucumber green, short (*Cucumis sativus*);** A. Tiyoh; B. Sosha; G. Kakdi; H. Kheera; Kan. Southe kayi; Kash. Laar; Kh. Sokhia; M. Thabi; Mal. Vellarikka; Mar. Kakadi; N. Kakro; O. Kakudi; P. Khira; S. Patolah; Tam. Vellarikkai; Tel. Dosa kaya; U. Kheera.

**D045. Cucumber orange, round** (*Cucumis sativus*); A. Tiyoh; B. Sosha; G. Kakdi; H. Kakadi; Kan. Southe kayi; Kash. Laar; Kh. Sokhia pyllon; Mal. Vellarikkka; Mar. Kakadi; N. Kakro; O. Kakudi; P. Khira; S. Patolah; Tam. Vellarikkai; Tel. Dosa kaya; U. Kheera.

**D046. Drumstick** (*Moringa oleifera*); A. Sajina; B. Sajna danta; G. Saragavo; H. Saijan-ki-phalli; Kan. Nugga kayi; Kh. Dieng sajana; Mal. Muringakkai; M. Sajana; Mar. Shevanga sheng; O. Sajana chhuin; P. Suhanjana di phalliyia; Tam. Murungakkai; Tel. Mulakaada; U. Sujne ki palli.

**D047. Field beans, tender, broad** (*Vicia faba*); A. Urohi; B. Shim; G. Valpapdi; H. Sem; Kan. Avare; Kash. Hyambi; Kh. Ri majai; Mal. Avar; Mar. Papta; O. Baragudi; Tam. Vidaivarai; Tel. Chikkudu ginjalu; U. Sem ki palli.

**D048. Field beans, tender, lean** (*Vicia faba*); A. Urohi; B. Shim; G. Valpapdi; H. Sem; Kan. Avare; Kash. Hyambi; Kh. Ri majai; Mal. Avar; Mar. Papta; O. Baragudi; Tel. Chikkudu ginjalu; Tam. Vidaivarai; U. Sem ki palli.

**D049. French beans, country** (*Phaseolus vulgaris*); A. French bean; G. Fansi; H. Fras beans; Kan. Huruli kayi; Kash. Hyambi; Kh. Presbin phyrngop; Mal. Beans; Mar. Pharasebee; N. Ghiu Simi; O. Beans; P. Fras beans; Tam. Vidaivarai; Tel. Sannachikkudu; U. Beans.

**D050. French beans, hybrid** (*Phaseolus vulgaris*); A. French bean; G. Fansi; H. Bakla; Kan. Huruli kayi; Kash. Hyambi; Kh. Presbin; Mal. Beans; Mar. Pharasebee; N. Ghiu Simi; O. Beans; P. Fras bean; Tam. Vidaivarai; Tel. Sannachikkudu; U. Beans.

**D051. Jack fruit, raw** (*Artocarpus heterophyllus*); A. Kothal; B. Kanthal; G. Phanas; H. Kathal; Kash. Bindu; Kan. Halasu; Kh. Soh phan; M. Theibong; Mal. Chakka; Mar. Phanas; N. Katahar; O. Panasa; P. Kathal; S. Panasa; Tam. Palapazham; Tel. Panasa; U. Kathahal.

**D052. Jack fruit, seeds, mature** (*Artocarpus heterophyllus*); A. Kothal guti; B. Kanthal; G. Phanas; H. Kathal ke beej; Kan. Halasu; Kash. Bindu; Kh. Shyieng soh phan; Mal. Chakka kuru; M. Theibong maru; Mar. Phanas; N. Katahar; P. Kathal ke beej; S. Panasa; Tam. Palakkottai; Tel. Panasa; U. Kathahal.

**D053. Knol - Khol** (*Brassica oleracea*); A. Oolkobi; B. Olkopi; G. Nol-kol; H. Kohl-rabi; Kan. Noolkol; Kash. Monjh haak; Kh. Phan kubi; Mal. Noolkol; M. Kobi Maru Kabi; Mar. Nol-kol; N. Gyathkopi; O. Ulkobi; P. Ganth gobi; Tam. Knoolkol; Tel. Noolkol.

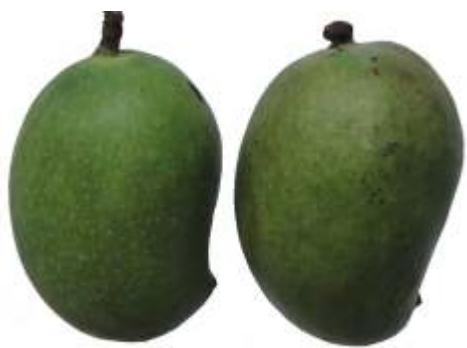

**D054. Kovai, big** (*Coccinia cordifolia*); A. Kunduli; B. Telakucha; G. Ghole gluru; H. Konduri ; Kan. Tondekayi; Kh. Jhur thliem; Mal. Kova kai; Mar. Tondale; O. Kunduru; Tam. Kova kai; Tel. Donda kaya; U. Tindli.

**D055. Kovai, small** (*Coccinia cordifolia*); A. Kunduli; B. Telakucha; G. Ghole gluru; H. Konduri; Kan. Tondekayi; Kh. Jhur thliem; Mal. Kova kai; Mar. Tondale; O. Kunduru; Tam. Kova kai; Tel. Donda kaya; U. Tindli.

**D056. Ladies finger** (*Abelmoschus esculentus*); A. Bhendi; B. Dherosh; G. Bhinda; H. Bhindi; Kan. Bende; Kash. Bindi; Kh. bindi; Mal. Vendakkai; M. Belandri; Mar. Bhendi; N. Ramtoriya; O. Bhendi; P. Bhindi; S. Bhindikaa; Tam. Vendaikkai; Tel. Bendakaya; U. Bhendi.

**D057. Mango, green, raw (*Mangifera indica*)**; A. Keasa aam; B. Aam (kancha); G. Ambo; H. Katcha Aam; Kan. Mavinakayi; Kash. Kach Aamb; Kh. Soh pieng im; Mal. Manga; M. Heinou Ashangba; Mar. Amba; O. Ambu (kacha); P. Kaccha aam; Tam. Mangai; Tel. Mamidikaya; U. Kaccha aam.

**D058. Onion, stalk (*Allium cepa*)**; A. Piyaj paat; B. Piyaz kali; G. Dunglina dakkadi (Onion dakkadi); H. Hara Pyaz; Kan. Erulli soppu; Kash. Pichiganda; Kh. Sla piat; Mal. Ulli thandu; M. Tilhou mana; Mar. Pati; N. Chhayapi ko Saag; O. Piaja sandha; P. Hare pyaaz; Tam. Vengaya thaal; Tel. Ulli kadalu; U. Hari pyaaz.

**D059. Papaya, raw (*Carica papaya*)**; A. Kesa omita; B. Pempe (Kacha); G. Papai; H. Katcha pepita; Kan. Parangi; Kh. Soh kymphor im; Kash. Papita; Kon. Dudde; Mal. Omakaya; M. Awathabi Ashangba; Mar. Papaya; O. Amrutabanda; P. Katcha Pepita; Tam. Pappalikkaai; Tel. Boppayi kaya; U. Papaya.

**D060. Parwar (*Trichosanthes dioica*)**; A. Potol; B. Potol; G. Padval; H. Parwal; Kan. Mara thonde; Kh. Patol rit; Mal. Kovakkai; Mar. Parwar; O. Potala; P. Parwal; Tel. Kommu potla; U. Parwal.

**D061. Peas, fresh (*Pisum sativum*)**; A. Matar mah; B. Motor shuti; G., Mar. Vatana; Kash. Kaza; O. Matara; H. Matar; Kan., Tel. Batani; Kash. Matar; Kh. Mator; M. Hawai tharaak; P. Hare matar; Mal., Tam. Paccha pattani.

**D062. Plantain, flower (*Musa x paradisiaca*)**; A. Koldil; B. Mocha; G. Kel phool; H. Kele-ka phool; Kan. Bale motho; Kh. Pashor kait; Mal. Vazhapoo; M. Lafu Tharo; Mar. Kel phool; O. Kadali bhanda; P. Kele-da-phool; Tam. Vazhapoo; Tel. Arati puvvu; U. Kela ka phool.

**D063. Plantain, green (*Musa x paradisiaca*)**; A. Kaskol/Purakol; B. Kela (kanch); G. Kela; H. Kele (hara); Kan. Bale kayi; Kash. Kham kael; Kh. Kait im; Mal. Vazhakkai; M. Laphoi Ashangba; M. Laphoi Ashangba; Mar. Kel (hara); N. Bungo; O. Bantala kadali; P. Kela (hara); S. Rambhaa ; Tam. Vazhakkaai; Tel. Arati kayi; U. Kaccha kela.

**D064. Plantain, stem (*Musa x paradisiaca*)**; A. Posola; B. Thor; G. Kelanu thed; H. Kele-ka-tana; Kan. Bele Dindu; Kh. Nud kait; Mal. Unnipindi; M. Lafu; Mar. Kelicha khunt; O. Kadali manja; P. Kele da tana; Tam. Vazhai thandu; Tel. Arati doota.

**D065. Pumpkin green, cylindrical (*Cucurbita maxima*)**; A. Rongalao; B. Kumro; G. Kohlu; H. Kaddu; Kan. Kumbala kash; Kash. Paarimal; Kh. Pathaw; Mal. Mathan; M. Mairen; Mar. Lal bhopla; N. Farsi; O. Kakharu; P. Kaddu; S. Kummaandah; Tam. Parangikkai; Tel. Gummadi kaya; U. Kaddu.

**D066. Pumpkin orange, round (*Cucurbita maxima*)**; A. Rongalao; B. Kumro; G. Kohlu; H. Kaddu; Kan. Kumbala kash; Kash. Paarimal; Kh. Pathaw saw; Mal. Mathan; M. Mairen; Mar. Lal bhopla; N. Farsi; O. Kakharu; P. Kaddu; S. Kummaandah; Tam. Parangikkai; Tel. Gummadi; U. Kaddu.

**D067. Red gram, tender, fresh (*Cajanus cajan*)**; H. Arhar ki fali; Tam. Thuvarai; Tel. Pacchi Kandulu; U. Hara tuvar.

**D068. Ridge gourd (*Luffa acutangula*)**; A. Jikaa; B. Jhinge; G. Turia; H. Torai; Kan. Heeraikai; Kash. Turrel ; Kh. Jingka; Kon. Gurdudde; Mal. Peechinga; M. Sebot; Mar. Dodka; O. Janhi; P. Tori; Tam. Peerankankai; Tel. Beera kaya; U. Turai.

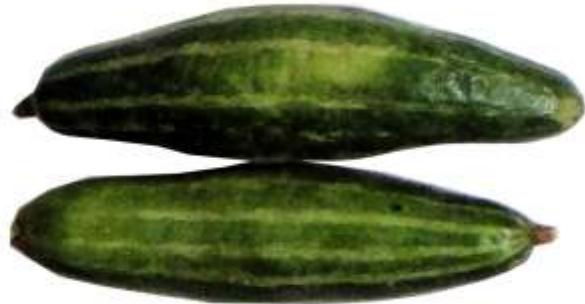

**D069. Ridge gourd, smooth skin (*Luffa acutangula*)**; A. Bhol; B. Jhinge; G. Turia; H. Torai; Kan. Heeraikai; Kash. Turrel; Kh. Jingka; Kon. Gurdudde; Mal. Peechinga; M. Sebot; Mar. Dodka; O. Janchi; P. Tori; Tam. Peerkankai; Tel. Beera kaya; U. Turai.

**D070. Snake gourd, long, pale green (*Trichosanthes anguina*)**; A. Dhunduli; B. Chichinga; G. Pandola; H. Chachinda; Kan. Podavala; Kh. Jingka; Mal. Padavalanga; Mar. Padwal; N. Chichindo; O. Chachinda; P. Galartori; S. Cicinndda; Tam. Pudalangai; Tel. Potla kaya; U. Chichinda.

**D071. Snake gourd, long, dark green (*Trichosanthes anguina*)**; A. Dhunduli; B. Chichinga; G. Pandola; H. Chachinda; Kan. Podavala; Kh. Jingka; Mal. Padavalanga; Mar. Padwal; N. Chichindo; O. Chachinda; P. Galartori; S. Cicinndda; Tam. Pudalangai; Tel. Potla kaya; U. Chichinda.

**D072. Snake gourd, short (*Trichosanthes anguina*)**; A. Dhunduli; B. Chichinga; G. Pandola; H. Chachinda; Kan. Podavala; Kh. Jingka; Mal. Padavalanga; Mar. Padwal; N. Chichindo; O. Chachinda; P. Galartori; S. Cicinndda; Tam. Pudalangai; Tel. Potla kaya; U. Chichinda.

**D073. Tinda, tender (*Praecitrullus fistulosus*)**; G. Tadabuch; H. Tinda; Kan. Thondekkai; Kash. Tinda; Mar. Dhemase; N. Tinda; P. Tinda; U. Tinde.

**D074. Tomato, green (*Solanum lycopersicum*)**; A. Kesa bilahi; B. Kacha Tomato; H. Tamator ; Kan. Goore Hannu; Kash. Rowagun; Kh. Soh saw jyrgam; Mal. Takkali; M. Khamen Ashinba; Mar. Hara velvangi; O. Bilati Baigan; P. Kaccha tamator; Tam. Thakkalikkaai; Tel. Ramamulaga-kaya; U. Kaccha tamatar.

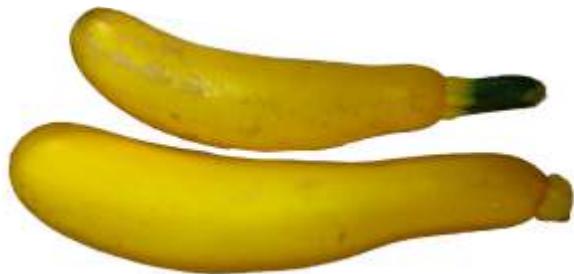

**D075. Tomato, ripe, hybrid** (*Solanum lycopersicum*); A. Poka bilahi; B. Tomato; G. Tameta; H. Tamator; Kan. Goore Hannu; Kash. Rowangun; Kh. Soh saw dkhar; Mal. Takkali pazham; M. Khamen ashinba; Mar. Velvangi; O. Bilati baigan; P. Pakke tamator; S. Rakta phalam; N. Gholobheda; Tam. Takkali pazham; Tel. Ramamulagakaya; U. Pakka tamatar.

**D076. Tomato, ripe, local** (*Solanum lycopersicum*); A. Poka bilahi; B. Tomato; G. Tameta; H. Tamator; Kan. Goore Hannu; Kash. Rowangun; Mal. Takkali pazham; M. Khamen ashinba; Mar. Velvangi; N. Gholobheda; O. Bilati Baigan; P. Pakke tamator; S. Rakta phalam; Kh. Soh saw khasii; Tam. Takkali pazham; Tel. Ramamulagakaya; U. Pakka tamatar.

**D077. Zucchini, green** (*Cucurbita pepo*); B. Dhudul; H. Sabed kaddu; Kan. Dilpasand; Kash. Kaashiral; Mar. Kashi bhopla; O. Golu phubi kakuri; Tam. Seemai suraikayi.

**D078. Zucchini, yellow** (*Cucurbita pepo*); B. Dhudul; H. Sabed kaddu; Kan. Dilpasand; Kash. Kaashiral; Mar. Kashi bhopla; O. Golu phubi kakuri; Tam. Seemai suraikayi.

**E001. Apple, big** (*Malus domestica*) A. Apel; B. Sev; G. Safarjan; H. Sev; Kan. Sebu; Kash. Tsoonth; Kh. Soh apple saw; Mal., Tam. Apple pazham; M. Sem; Mar. Safar chand; N. Shau; O. Sev; P. Seb; S. Seva; Tel. Sepu/Sema regu; U. Saib.

**E002. Apple, green** (*Malus domestica*) A. Apel; B. Sev; G. Lila safarjan; H. Sev; Kan. Sebu; Kash. Tsoonth; Kh. Soh apple Jyrngam; Mal. Apple pazham; M. Sem; Mar. Safar chand; N. Shau; O. Sev; P. Seb; S. Seva; Tam. Apple pazham; Tel. Sepu/Sema regu; U. Saib.

**E003. Apple, small (*Malus domestica*)** A. Apel; B. Sev; G. Safarjan; H. Sev; Kan. Sebu; Kash. Tsoonth; Kh. Soh apple saw; Mal. Apple pazham; M. Sem; Mar. Safar chand; N. Shau; O. Sev; P. Seb; S. Seva; Tam. Apple pazham; Tel. Sepu/Sema regu; U. Saib.

**E004. Apple, small, Kashmir (*Malus domestica*)** A. Apel; B. Sev; G. Safarjan; H. Sev; Kan. Seb; Kash. Tsoonth; Kh. Soh apple saw; Mal. Apple pazham; M. Sem; Mar. Safar chand; N. Shau; O. Sev; P. Seb; S. Seva; Tam. Apple pazham; Tel. Sepu/Sema regu; U. Saib.

**E005. Apricot, dried (*Prunus armeniaca*)**; A. Malhoi; B. Suska khubani; G. Jardaloo (Suka velu); H. Khoomani; Kan. Jaldaru Hannu; Kash. Tser; Mal. Sheema bedhaam pazham; M. Malhei; Mar. Jardaalu; N. Khattu; P. Kharamani; Tel. Seema Badam/ Jallaru Pandu; Tam. Sakkrai badhami; U. Khubaani.

**E006. Apricot, processed (*Prunus armeniaca*)**; A. Malhoi; B. Suska khubani; G. Jardaloo; H. Khoomani; Kan. Jaldaru Hannu; Kash. Tser; Mal. Sheema bedhaam pazham; M. Malhei; Mar. Jardaalu; N. Khattu; P. Kharamani; Tam. Sakkrai badhami; Tel. Seema Badam/ Jallaru Pandu; U. Khubaani.

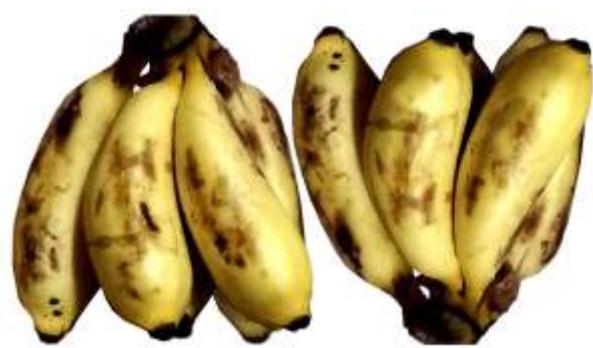

**E007. Avocado fruit (*Persea americana*)**; B. Kulunashpati; H. Makhan phal; Kan. Bennephala/ Bennehannu; Kash. Goshtub tang; Mal. Aathachakka/ Venna pazham; Mar. Makhan phal; P. Makhan phal; Tam. Vennaipazham; .

**E008. Bael fruit (*Aegle marmelos*)**; B., Bel; G. Bila; H. Bel, Kh. Soh bel; Mal. Vilwa pazham; M. Heiri Khagok; P. Bhel; Mar. Bel; Tam. Vilwa pazham; Tel. Marendu pandu.

**E009. Banana, ripe, montham** (*Musa x paradisiaca*) A. Poka kol; B. Kola(paka); G. Paka keda; H. Kela; Kan. Bale hannu; Kash. Kela; Kh. Kait syiem; Mal. Vazha pazham; M. Laphoi; Mar. Kele; N. Kera; O. Champa kadali; P. Kella; S. Kadalii; Tam. Vazha pazham; Tel. Arati pandu; U. Kela.

**E010. Banana, ripe, poovam** (*Musa x paradisiaca*) A. Poka kol; B. Kola (paka); G. Paka keda; H. Kela; Kan. Bale hannu; Kash. Kela; Kh. Kait mon/ ja; Mal. Vazha pazham; M. Laphoi; Mar. Kele; N. Kera; O. Champa kadali; P. Kella; S. Kadalii; Tam. Vazha pazham; Tel. Arati pandu; U. Kela.

**E011. Banana, ripe, red** (*Musa paradisiaca*) A. Poka kol; B. Kola (paka); G. Lal paka keda; H. Kela; Kan. Bale hannu; Kash. Kela; Kh. Kait saw; Mal. Vazha pazham; M. Laphoi; Mar. Kele; N. Kera; O. Champa kadali; P. Kella; S. Kadalii; Tam. Sevvazhaipazham; Tel. Arati pandu; U. Kela.

**E012. Banana, ripe, robusta** (*Musa x paradisiaca*) A. Poka kol; B. Kola (paka); G. keda; H. Kela; Kan. Bale hannu; Kash. Kela; Kh. Kait jaji; Mal. Vazha pazham; M. Laphoi; Mar. Kele; N. Kera; O. Champa kadali; P. Kella; S. Kadalii; Tam. Vazhaipazham; Tel. Arati pandu; U. Kela.

**E013. Black berry** (*Rubus* sp.); A. Kola jamu; B. Kalojam; G. Jambu; H. Kala Jamun; Kan. Neralai; Kh. Soh jam/ Soh jamun; Mal. Naval pazham; M. Jaam; Mar. Jambhool; O. Jamukoli; P. Jamun; Tam. Nagapazham; Tel. Neredupandu.

**E014. Cherries, red** (*Prunus cerasus*); G. Cherry; H. Gilas; Kan. Kađugempu; Kash. Gilas; Kh. Soh sherri; Mal. Cherrypazham; Mar. Cherry phal; P. Cherry; Tam. Cherry pazham; Tel. Cherri pandu.

**E015. Currants, black (*Ribes nigrum*)**; A. kismis; G. kadi draksh; H. Munakka; Kan. Nerale hannu; Kh. Soh kismis iong; Mal. Najavalppazham; Mar. Kala pravaha; Tam. Karunthiratcha; Tel. Nalla Kishmish; U. kala kishmish.

**E016. Custard apple (*Annona squamosa*)**; A. Sitaphal; B. Ata; G. Sitapad; H. Sharifa; Kan. Sharifa; O. Ata; Mal. Sithapazham; Mar. Sitaphal; P. Sharifa; Tam. Seethapazham; Tel. Sitaphalam.

**E017. Dates, dry, pale brown (*Phoenix dactylifera*)**; A. Khajur; B. Kharjura; G. Kharek; H. Chuhara; Kan. Kharjoora; Kash. Khajur; Kh. Soh khajur; Mal. Eethapazham; M. Thangtup; Mar. Khajur; N. Khajura; O. Khajuri; P. Chawara; S. Kharjura; Tam. Pericham pazham; Tel. Khajoora pandu; U. Khajur.

**E018. Dates, dry, dark brown (*Phoenix dactylifera*)**; A. Khajur; B. Kharjura; G. Chuhara; H. Khajur; Kan. Kharjoora; Kash. Khajur; Kh. Soh khajur; Mal. Eethapazham; M. Thangtup; Mar. Khajur; N. Khajura; O. Khajuri; P. Chawara; S. Kharjura; Tam. Pericham pazham; Tel. Khajoora pandu; U. Khajur.

**E019. Dates, processed (*Phoenix dactylifera*)**; A. Khajur; B. Kharjura; G. Khajur; H. Khajur; Kan. Kharjoora; Kash. Khajur; Kh. Soh khajur im; Mal. Eethapazham; M. Thangtup; Mar. Khajur; N. Khajura; O. Khajuri; P. Khajur; S. Kharjura ; Tam. Pericham pazham; Tel. Khajoora pandu; U. Khajur.

**E020. Figs (*Ficus Carica*)**; A. Dimoru; B. Dumura; G. Anjir; H. Anjeer; Kan. Anjurada hanñugaļu; Kash. Anjeer; Kh. Soh Dimbur; Mal. Athipazham; M. Heirit; Mar. Anjir; N. Anjir; O. Dimiri; S. Anjiira; P. Anjeer; Tam. Athipazham; Tel. Atti pandu; U. Anjeer.

**E021. Gooseberry (*Emblica officinalis*)**; A. Amlakhi; G. Amla; H. Amla; Kan. Betta nelli; Kh. Soh mylleng; Mal. Nellikka; M. Heikru; Mar. Amla; O. Aanla; P. Olle; Tam. Nellikkai; Tel. Usirkaya.

**E022. Grapes seeded, round, black (*Vitis vinifera*)**; A. Angoor; B. Angoor; G. Kadi Draksha; H. Angoor; Kan. Draksha; Kash. Dach; Kh. Soh grape iong; Mal. Mundiringa; M. Angoor; Mar. Draksha; N. Angoor; O. Angoor; P. Angoor; S. Draakssaa; Tam. Panneer dratchai; Tel. Draksha padu.

**E023. Grapes seeded, round, green (*Vitis vinifera*)**; A. Angoor; B. Angoor; G. Lili Draksha; H. Angoor; Kan. Draksha; Kash. Dach; Kh. Soh grape jyrngam; Mal. Mundiringa; M. Angoor; Mar. Draksha; N. Angoor; O. Angoor; P. Angoor; S. Draakssaa; Tam. Dratchai; Tel. Draksha padu.

**E024. Grapes seeded, round, red (*Vitis vinifera*)**; A. Angoor; B. Angoor; G. Lal Draksha; H. Angoor; Kan. Draksha; Kash. Dach; Kh. Soh grape saw; Mal. Mundiringa; M. Angoor; Mar. Draksha; N. Angoor; O. Angoor; P. Angoor; S. Draakssaa; Tam. Dratchai; Tel. Draksha padu.

**E025. Grapes seedless, oval, black (*Vitis vinifera*)**; A. Angoor; B. Angoor; G. Draksha; H. Angoor; Kan. Draksha; Kash. Dach; Kh. Soh grape iong; Mal. Mundiringa; M. Angoor; Mar. Draksha; N. Angoor; O. Angoor; P. Angoor; S. Draakssaa; Tam. Dratchai; Tel. Draksha padu.

**E026. Grapes seedless, round, green (*Vitis vinifera*)**; A. Angoor; B. Angoor; G. Draksha; H. Angoor; Kan. Draksha; Kash. Dach; Kh. Soh grape jyrngam; Mal. Mundiringa; M. Angoor; Mar. Draksha ; N. Angoor; O. Angoor; P. Angoor; S. Draakssaa; Tam. Dratchai; Tel. Draksha padu.

**E027. Grapes seedless, round, black (*Vitis vinifera*)**; G. Kadi Draksha; H. Angoor; Kan. Draksha; Kash. Dach; Kh. Soh grape iong; Mal. Mundiringa; M. Angoor; Mar. Draksha; N. Angoor; O. Angoor; P. Angoor; S. Draakssaa; Tam. Dratchai; Tel. Draksha padu.

**E028. Guava, white flesh (*Psidium guajava*)**; A. Madhurium; B. Peyara; G. Jamphad; H. Amrud; Kan. Seebe; Kash. Amrodh; Kh. Soh pyriam; Mal. Perakka (nattu); M. Pungton; Mar. Peru; N. Aamba; O. Pijuli (deshi); P. Amrud; S. Peruka; Tam. Koiyapazham; Tel. Jama pandu; U. Amrood.

**E029. Guava, pink flesh (*Psidium guajava*)**; H. Amrud; Tel. Jama pandu; Tam. Koiyapazham; Kan. Seebe; Mal. Perakka; Mar. Peru; O. Pijuli; B. Peyara; G. Lal jamphad; P. Amrud; A. Madhurium; Kash. Amrodh; S. Peruka; N. Aamba; M. Bilaiti pungton; Kh. Soh pyriam.

**E030. Jack fruit, ripe (*Artocarpus heterophyllus*)**; A. Kothal; B. Kanthal; G. Phanas; H. Kathal; Kan. Halasu; Kh. Soh phan; Mal. Chakka; M. Theibong; Mar. Phanas; N. Katahar; O. Panasa; P. Kathal; Kash. Bindu; S. Panasa; Tam. Palapazham; Tel. Panasa; U. Kathahal.

**E031. Jambu fruit, ripe (*Syzygium samarangense*)**; A. Jamu; B. Jaamrool; H. Jamun; Kan. Neralai; Mal. Naval pazham; Mar. Jambhool; O. Jamukoli; P. Jamun; Tam. Nagapazham; Tel. Neredupandu.

**E032. Karonda fruit (*Carissa carandas*)**; A. Korja tenga; B. Koromcha; G. Karamda; H. Balalak, dindimi; Kan. Karekayi; Mar. Karvand; Mal. Karakka; O. Sushena; P. Karonda; S. Karamazda; Tam. Kalakkay/ Parungala; Tel. Kalive.

**E033. Lemon, juice** (*Citrus limon*); H. Nimbhu; Tel. Nimapandu ; O. Kagaji limbu; B. Pati Lebu; G. Limbu; P. Nibu; U. Neembu; A. Nemu; Kash. Nyomb; S. Lehin; N. Kaagati; M. Champra Mahi; Kh. Soh jew.

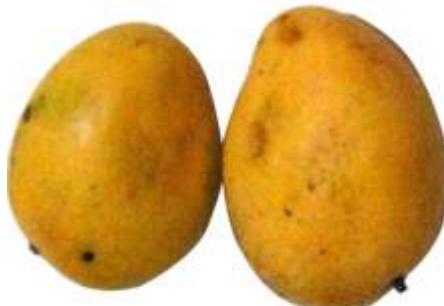

**E034. Lime, sweet pulp** (*Citrus limetta*); H. Mosambi; Tel. Gaja nimma pandu; Tam. Kolinchu pazham; Kan. Gaja nimbe; Mar. Limbu goda; B. Mitha lebu; G. Mosambi; A. Mosumi; Kash. Mosambi; P. Mosami; Kh. Soh balensha.

**E035. Litchi** (*Litchi chinensis*); A. Lichu; B. Lichu; G. Lichi; H. Lichi; Kash. Lichi; Kh. Soh manir; Mal. Lichi; M. Lichu; Mar. Lichi; N. Lichi; O. Letchu; P. Lichi; Tam. Lichi; Tel. Lichi; Kan. Lichi; U. Lichi.

**E036. Mango, ripe, banganapalli** (*Mangifera indica*); A. Aam; B. Aam(paka); G. Keri; H. Aam (paka); Kan. Mavina hannu; Kash. Aamb; Kh. Soh pieng; Mal. Mam pazham; M. Heinou Amunba; Mar. Amba (piklela); N. Ampa; O. Amba (pachila); P. Aam; S. Aamra; Tam. Mampazham; Tel. Mamidi pandu; U. Pakka aam.

**E037. Mango, ripe, gulabkhas** (*Mangifera indica*); A. Aam; B. Aam (paka); G. Pakeli Kedi; H. Aam (paka); Kan. Mavina hannu; Kash. Aamb; Kh. Soh pieng; Mal. Mam pazham; M. Heinou Amunba; Mar. Amba (piklela); N. Ampa; O. Amba (pachila); P. Aam; S. Aamra; Tam. Mampazham; Tel. Mamidi pandu; U. Pakka aam.

**E038. Mango, ripe, himsagar** (*Mangifera indica*); A. Aam; B. Aam (paka); G. Keri; H. Aam (paka); Kan. Mavina hannu; Kash. Aamb; Kh. Soh pieng; Mal. Mam pazham; M. Heinou Amunba; Mar. Amba (piklela); N. Ampa; O. Amba (pachila); P. Aam; S. Aamra; Tam. Mampazham; Tel. Mamidi pandu; U. Pakka aam.

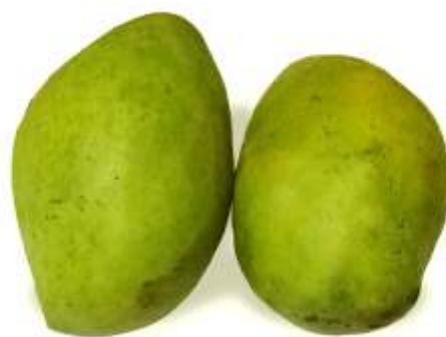

**E039. Mango, ripe, kesar** (*Mangifera indica*); A. Aam; B. Aam (paka); G. Kesar kedi; H. Aam (paka); Kan. Mavina hannu; Kash. Aamb; Kh. Soh pieng; Mal. Mam pazham; M. Heinou Amunba; Mar. Amba (piklela); N. Ampa; O. Amba (pachila); P. Aam; S. Aamra; Tam. Mampazham; Tel. Mamidi pandu; U. Pakka aam.

**E040. Mango, ripe, neelam** (*Mangifera indica*); A. Aam; B. Aam (paka); G. Nilam kedi; H. Aam (paka); Kan. Mavina hannu; Kash. Aamb; Kh. Soh pieng; Mal. Mam pazham; M. Heinou Amunba; Mar. Amba (piklela); N. Ampa; O. Amba (pachila); P. Aam; S. Aamra; Tam. Mampazham; Tel. Mamidi pandu; U. Pakka aam.

**E041. Mango, ripe, paheri** (*Mangifera indica*); A. Aam; B. Aam (paka); G. Keri; H. Aam (paka); Kan. Mavina hannu; Kash. Aamb; Kh. Soh pieng; Mal. Mam pazham; M. Heinou Amunba; Mar. Amba (piklela); N. Ampa; O. Amba (pachila); S. Aamra; Tam. Mampazham; Tel. Mamidi pandu; U. Pakka aam.

**E042. Mango, ripe, totapari** (*Mangifera indica*); A. Aam; B. Aam (paka); G. Totapuri kedi; H. Aam (paka); Kan. Mavina hannu; Kash. Aamb; Kh. Soh pieng; Mal. Mam pazham; M. Heinou Amunba; Mar. Amba (piklela); N. Ampa; O. Amba (pachila); P. Aam; S. Aamra; Tel. Mamidi pandu; Tam. Mampazham; U. Pakka aam.

**E043. Mangosteen** (*Garcinia mangostana*); H. Mangustan; Mal. Kodam puli; Tam. Sulambali.

**E044. Manila tamarind** (*Pithecellobium dulce*); B. Jilapi; G. Bakhai ambli/Vilayabi ambli; H. Ganga imli/ Jangal jalebi; Kan. Seema/ dora hunase; Kh. Soh kyntoi im; M. Mange; Mar. Vilayatichinch; P. Jangal jalebi; Tam. Kodukkapuli; Tel. Seema chintakaya.

**E045. Musk melon, orange flesh (*Cucumis melon*)**; A. Siral; B. Kharamuja; G. Kharbujo; H. Kharbooja; Kan. Kharbooja; Kash. Kherbz; Mal. Mulam pazham; Mar. Kharbooja; O. Kharbooja; P. Kharbooja; S. Kharbuuja; Tam. Mulam pazham; Tel. Kharbooja; U. Kharbz.

**E046. Musk melon, yellow flesh (*Cucumis melo*)**; A. Siral; B. Kharamuja; G. Kharbujo (Pido); H. Kharbooja; Kan. Kharbooja; Kash. Kherbz; Mal. Mulam pazham; Mar. Kharbooja; O. Kharbooja; P. Kharbooja; S. Kharbuuja; Tam. Mulam pazham; Tel. Kharbooja; U. Kharbz.

**E047. Orange, pulp (*Citrus aurantium*)**; A. Komola; B. Kamala lebu; G. Santra; H. Santra; Kan. Kithilai; Kash. Sangtar; Kh. Soh niamtra; Mal. Madhura naranga; M. Komla; Mar. Santre; N. Suntala; O. Kamala; P. Santra; S. Naarangga; Tam. Saathukudi; Tel. Kamala padu; U. Santra.

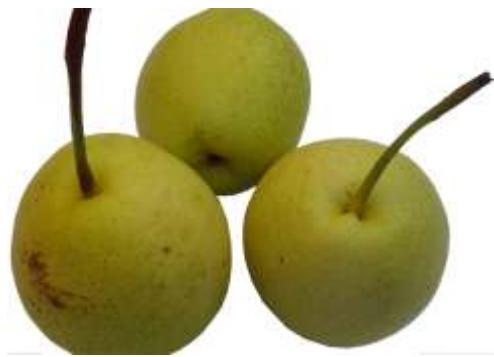

**E048. Palm fruit, tender (*Borassus flabellifer*)**; H. Tar; Kan. Thati mangu; Mal. Panamnungu; O. Tala Saja; Tam. Panai nungu; Tel. Thati munjalu.

**E049. Papaya, ripe (*Carica papaya*)**; A. Amita; B. Pepe (paka); G. Papayu; H. Papita; Kan. Pappayi Hannu; Kash. Papita; Kh. Soh Kymphor; Kon. Papayi; Mal. Omakai; M. Awathabi amunba; Mar. Popai; N. Mewa; O. Amrutbhanda (Pachila); P. Papita; Tam. Pappali; Tel. Boppayi pandu; U. Papita.

**E050. Peach (*Prunus communis*)** A. Ahom bogori; H. Aroo; Kash. Aer; Kh. Soh phareng; M. Chumbrei; P. Aroo.

**E051. Pear (*Pyrus* sp.);** A. Naspoti; B. Nashpati; G. Nashpatino; H. Nashpati; Kan. Berikai; Kash, Tang; Kh. Soh phoh; Mal. Sabarjil; M. Naspati; Mar. Nashpati; N. Naspati; O. Nashpati; P. Nashpati; Tam. Berikkai; Tel. Berikaya; U. Nashpati.

**E052. Phalsa (*Grewia asiatica*);** A. Pharaskol; B. Falsa; G. Falsa; H. Falsa; Kan. Phalsa hannu; Kh. Soh broi rit; Mal. Palisa; Mar. Falsa; O. Mirgichara; P. Falsa; Tam. Palisa; Tel. Falsa pandu; U. Falsa.

**E053. Pineapple (*Ananas comosus*);** A. Ahnaros; B. Anarasa; G. Anenas; H. Ananas; Kan. Ananas; Kash. Punchitipul; Kh. Soh trun; Kon. Anas; Mal. Kayitha chakka; M. Kihom; Mar. Ananas; O. Sapuri; P. Ananas; Tam. Annasi pazham; Tel. Anasa pandu; U. Ananas.

**E054. Plum (*Prunus domestica*);** B. Alubokhara H. Alubokhara; G. Aaddu; Kan. Onagida draakshi; Kash. Aeir; Kh. Soh plum dorris/ Norris; M. Heikha; P. Aloobhukhara; Tel. Alapagoda.

**E055. Pomegranate, maroon seeds (*Punica granatum*);** A. dalim; B. Bedana; G. Dadam; H. Anar; Kan. Dalimbari; Kash. Daan; Kh. Soh pomegranate; Kon. Dalimb; Mal. Mathalam pazham; M. Kamphoi; Mar. Dalimb; O. Dalimba; P. Anar; S. Daaddima; Tam. Madhulam pazham; Tel. Danimma pandu; U. Anaa.

**E056. Pummelo (*Citrus maxima*);** A. Rabab tenga; B. Batabilembu; G. Papnuse; H. Chakotra; Kan. Chakkota; Kh. Soh bah; Mal. Bombilimas; M. Nobab; Mar. Papnus; O. Batapilembu; Tam. Bombilimas; Tel. Pampara panasa.

**E057. Raisins, dried, black (*Vitis vinifera*)**; A. kishmish; B. kishmish; G. Kadi Draksha; H. Kishmish; Kan. Drashi; Kash. kishmish; Kh. Kismis iong; Mal. Mundiringa (unakku); M. Kismis; Mar. kishmish; O. kishmish; P. Songi; Tam. Ular dhirachai; Tel. Endu draksha; U. kishmish.

**E058. Raisins, dried, golden (*Vitis vinifera*)**; A. Kishmish; B. Kishmish; G. Pidi Draksha; H. Kishmish; Kan. Drashi; Kash. Kishmish; Kh. Kismis saw; Kon. Suke dhrakshi; Mal. Mundiringa (unakku); M. Kismis; Mar. kishmish; N. Kismis; O. Kishmish; P. Songi; Tam. Ular dhirachai; Tel. Endu draksha; U. Kishmish.

**E059. Rambutan (*Nephelium lappaceum*)**; H. Rambutan.

**E060. Sapota (*Achras sapota*)**; A. Chiku; H. Chiku; Kan. Sapota; Mal. Sapota; Mar. Chiku; O. Sapota; P. Chiku; Tel. Sapota; U. Sapota.

**E061. Soursop (*Annona muricata*)**; H. Shul-ram fal; Kan. Lakshmanaphala/Mulluramphala; Mal. Mullatha; Tam. Malai seethapalam/ Paanghi pazham; Tel. Lakshamana phalamu.

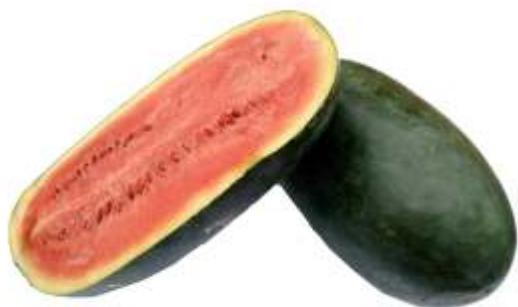

**E062. Star fruit (*Averrhoa carambola*)**; A. Kordoi; G. Amrakh; H. Kazmal/Kamrakh; Kan. Kamaraka/ Kapazakshi hannu; Kh. Soh pyrshong; Mal. Caturappuli; M. Heinoujom; Mar. Karambal; O. Karamanga; Tam. Tamarattai; U. Kamrakh.

**E063. Strawberry** (*Fragaria x ananassa*); G. strawberry; Kan. Nela milli hannu; Kh. Strawberry/ soh stap; Mal. Stroberry; P. Lachi; Kash. Istaber; Tam. Strawberry.

**E064. Tamarind, pulp** (*Tamarindus indica*); A. Teteli; B. Tetul; G. Amlí; H. Imli; Kan. Hunise hannu; Kash. Tambari; Kh. Soh kyntoi; Mal. Puli; M. Mange; Mar. Chinch; N. Imali; O. Tentuli; P. Imli; S. Sucukrika; Tam. Puli; Tel. Chintha pandu; U. Imli.

**E065. Water melon, dark green (sugar baby)** (*Citrullus vulgaris*); A. Tormuj; B. Tarmuj; G. Tadbuj; H. Tarbuj; Kan. Kallangadi; Kash. Hend wend; Kh. Soh watermelon; Kon. Bacchanga; Mal. Thannir mathan; M. Tarbuj; Mar. Kalingad; N. Kharbuja; O. Tarvuja; P. Dawana; Tam. Darbusani; Tel. Puchakaya; U. Tarbuja.

**E066. Water melon, pale green** (*Citrullus vulgaris*); A. Tormuj; B. Tarmuj; G. Tadbuj; H. Tarbuj; Kan. Kallangadi; Kash. Hend wend; Kh. Soh watermelon; Kon. Bacchanga; Mal. Thannir mathan; M. Tarbuj; Mar. Kalingad; N. Kharbuja; O. Tarvuja; P. Dawana; Tam. Darbusani; Tel. Puchakaya; U. Tarbuja.

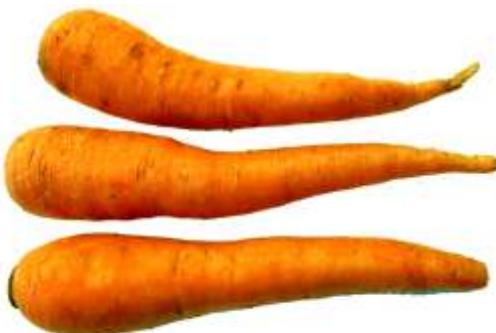

**E067. Wood apple** (*Limonia acidissima*); A. Bel; B. Koyethbel; G. Kothu; H. Kaith; Kan. Bele; Kash. Bum choont; Mal. Vilam pazham; Mar. Kavath; O. Kaitha; P. Chaktora; S. Bilvaon (Gorakamli); Tam. Vilam pazham; Tel. Velega pandu; U. Beal.

**E068. Zizyphus** (*Zizyphus jujuba*); A. Bogori; B. Kula; G. Ber; H. Ber; Kan. Yelachi; Kash. Brey; Kh. Soh broi heh; Kon. Bor; Mal. Elanth Pazham; M. Boroi; Mar. Bor; O. Barakoli; P. Beri; S. Badarii; Tam. Elanthai pazham; Tel. Regu pandu; U. Ber.

**F001. Beet root (*Beta vulgaris*)**; A. Beet; B. Beet; G. Beet; H. Chukandar; Kan. Beet; Kh. U bit; Kash. Chogander munji; Mal. Beet root; Mar. Beet root; O. Bita; P. Chukandar; S. Paalangashaakah; Tam. Beet root; Tel. Beet root; U. Chokhandar.

**F002. Carrot, orange (*Daucus carota*)**; A. Gajor; B. Gajar; G. Gajar; H. Gajar; Kan. Gajjare; Kash. Ghahzir; Kh. U kajor; Mal. Carrot; M. Gajar; Mar. Gajar; N. Gajar; O. Gajara; P. Gajar; S. Grunjanam; Tam. Carrot; Tel. Gajjara gadda; U. Gajar.

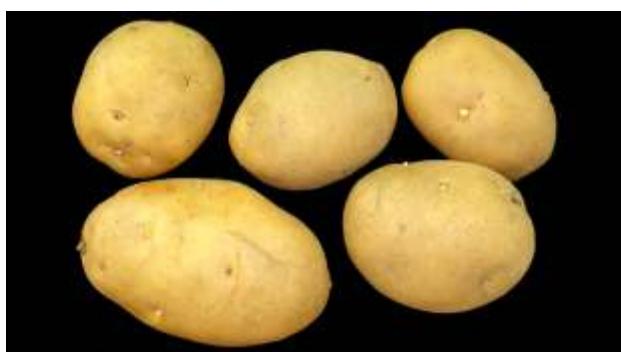

**F003. Carrot, red (*Daucus carota*)**; A. Gajor; B. Gajar; G. Gajar; H. Gajar; Kan. Gajjare; Kash. Ghahzir; Kh. Kajor; Mal. Carrot; M. Gajar; Mar. Gajar; N. Gajar; O. Gajara; P. Gajar; S. Grunjanam; Tam. Carrot; Tel. Gajjara gadda; U. Gajar.

**F004. Colocasia (*Colocasia esculenta*)**; A. Kosu; B. Kochu; G. Advi; H. Arwi; Kan. Samagadde; Kash. faram; Kh. Ka shriew; Mal. Chembu; M. Paan; Mar. Alu kanda; O. Saru; P. Arwi; Tam. Seppankizhangu; Tel. Chama dumpa; U. Arwi.

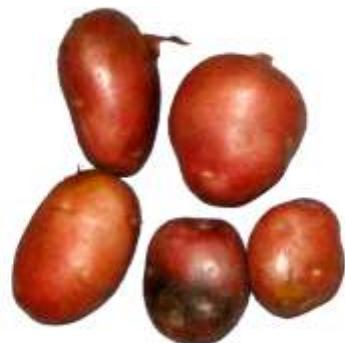

**F005. Lotus root (*Nelumbium nelumbo*)**; A. podum thari; G. Kamad kakdiH. Kamal gatta; Kan. Tavare dantu; Kash. Nader; Kh. Thied lotus; Mal. Thamara thandu; M. Thambou; Mar. Kamalkaakdi; O. Padma nad; P. Kamal zahr; Tam. Thamaraithandu; Tel. Thamara kada; U. Kanwal kakri.

**F006. Potato, brown skin, big (*Solanum tuberosum*)**; A. Simolu aloo; B. Gal alu; G. Bateka; H. Alu; Kan. Alugadda; Kash. Oalu; Kh. U phan; Kon., Alu; N. Alu; Mal. Urula kizhangu; M. Aloo; Mar. Batata; O. Alu; P. Alu; S. Aalukah; Tam. Urulai kizhangu; Tel. Bangala dumpa; U. Alu.

**F007. Potato, brown skin, small (*Solanum tuberosum*)**; A. Simolu aloo; B. Gal alu; G. Bateka; H. Alu; Kan. Alugadda; Kash. Oalu; Kh. Phan rit; Kon. Alu; M. Aloo; Mar. Batata; N., O., P., U. Alu; S. Aalukah; Tam. Urulaikizhangu; Tel. Bangala dumpa.

**F008. Potato, red skin (*Solanum tuberosum*)**; A. Aloo; B. Gal alu; G. Bateka; H. Alu; Kan. Alugadda; Kash. Oalu; Kh. Phan saw; Kon. Alu; Mal. Urula kizhangu; Mar. Batata; N. Alu; O. Alu; P. Alu; S. Aalukah; M. Aloo; Tam. Urulaikizhangu; Tel. Bangala dumpa; U. Alu.

**F009. Radish, elongated, red skin (*Raphanus sativus*)**; A. Mula; B. Mula; G. Muda; H. Muli; Kan. Mullangi; Kh. Muli saw; Mal. Mullangi; Mar. Mula; N. Mula; O. Mula; P. Gonglu; S. Moolikaa; Tam. Mullangi; Tel. Mullangi; U. Mooli.

**F010. Radish, elongated, white skin (*Raphanus sativus*)**; A. Mula; B. Mula; G. Muda; H. Muli; Kan. Mullangi; Kh. Muli lieh; Mal. Mullangi; Mar. Mula; N. Mula; O. Mula; P. Gonglu; S. Moolikaa; Tam. Mullangi; Tel. Mullangi; U. Mooli.

**F011. Radish, round, red skin (*Raphanus sativus*)**; A. Mula; B. Mula; G. Muda; H. Muli; Kan. Mullangi; Kh. Muli pylon; Mal. Mullangi; Mar. Mula; N. Mula; O. Mula; P. Gonglu; S. Moolikaa; Tam. Mullangi; Tel. Mullangi; U. Mooli.

**F012. Radish, round, white skin (*Raphanus sativus*)**; A. Mula; B. Mula; G. Muda; H. Muli; Kan. Mullangi; Kh. Muli pylon; Mal. Mullangi; Mar. Mula; N. Mula; O. Mula; P. Gonglu; S. Moolikaa; Tam. Mullangi; Tel. Mullangi; U. Mooli.

**F013. Sweet potato, brown skin (*Ipomoea batatas*)**; A. Meetha aloo; B. Ranga alu; G. Sakkaria; H. Shakarkand; Kan. Genasu; Kh. Phankaro iong; Mal. Sakkarvalli kizhangu; M. Manghra; Mar. Ratalu; N. Sakhar Khand; O. Kandamula; P. Sakkargandi; Tam. Sakkarvalli kizhangu; Tel. Chilagada dumpa; U. Ratalu.

**F014. Sweet potato, pink skin (*Ipomoea batatas*)**; A. Meetha aloo; B. Ranga alu; G. Sakkaria; H. Shakarkand; Kan. Genasu; Kh. Phankaro saw; Mal. Sakkarvalli kizhangu; M. Manghra; Mar. Ratalu; N. Sakhar Khand; O. Kandamula; P. Sakkargandi; Tam. Sakkarvalli kizhangu; Tel. Chilagada dumpa; U. Ratalu.

**F015. Tapioca (*Manihot esculenta*)**; A. Sagi; B. Simla alu; G. Aararoot; H. Simla alu; Kan. Mara genasu; Kh. Phan dieng; Mal. Marachini; M. U Manghra; Mar. Simla Batata; N. Tarul; O. Kathakonda; P. Simla alu; Tam. Maravalli kizhangu; Tel. Krrapendalamu; U. Kasawa soji.

**F016. Water Chestnut (*Eleocharis dulcis*)**; A. Pani singora; B. Pani phal; G. Shingoda; H., Mar. Shingara; Kash. Goer; Mal. Karimpolam; M. Kaothum; O. Pani singhara; P. Shingada; Tam. Singhara; Tel. Kubyakam.

**F017. Yam, elephant (*Amorphophallus campanulatus*)**; A. Ol kachu; B. Ol; G. Suran; H. Zimikandha; Kan. Suvarna gadda; Kh. Shriew hati; Mal. Chena; M. Haa; Mar. Suran; O. Suran; P. Zimikand; Tam. Karunai kizhangu; Tel. Kandha dumpa.

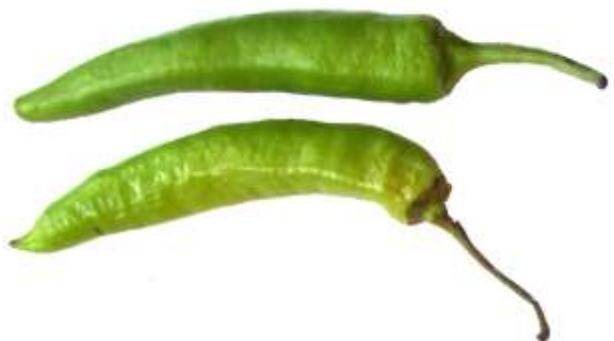

**F018. Yam, ordinary (*Amorphophallus sp.*)**; A. Kath aloo; B. Gherkochoo; G. Ratadu; H. Sooran; Kan. Suvarna gadda; Kh. Shriew jrong; Mal. Chena; M. Haa; Mar. Goradu; N. Pidaloo; O. Khamba alu; S. Aalu; Tam. Karunai kizhangu; Tel. Durdakandagadda.

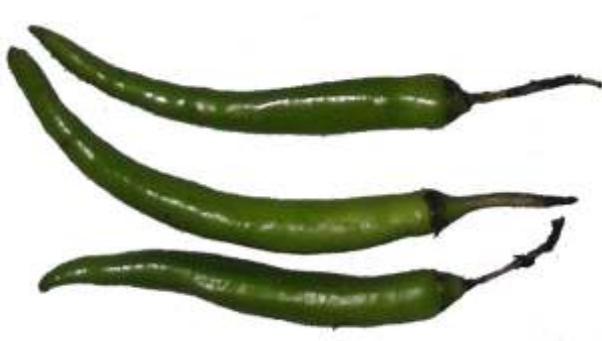

**F019. Yam, wild** (*Dioscorea villosa*); A. Jongoli kosu; B. Ranga alu; G. Ratadu; H. Suaralu; Kan. Hegganasu; Kh. Shriew lieh; Mal. Kattuchena; M. Haa; Mar. Suran; Tam. Kodi kizhangu; Tel. Chedu paddu dumpa.

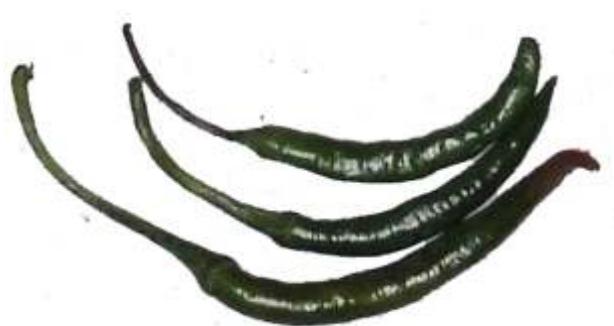

**G001. Chillies, green-1** (*Capsicum annum*); A. Kesa jalakia; G. Lila marcha; H. Hara Mirchi; Kan. Hasi Menasinakayi; Kash. Marach wangun; Kh. Soh mynken heh; Mal. Mulaku; M. Morok; Mar. Mulaku; N. Hariyo khursani; O. Kancha Lanka; P. Hara mirchi; S. Marichika; Tam. Pachhai milagai; Tel. Pacchi Mirapakaya; U. Hara mirchi.

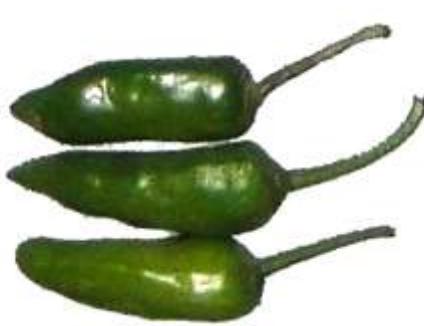

**G002. Chillies, green-2** (*Capsicum annum*); A. Kesa jalakia; G. Lila marcha; H. Hara Mirchi; Kan. Hasi Menasinakayi; Kash. Marach wangun; Kh. Soh mynken dkhar; Mal. Mulaku; M. Morok; Mar. Mulaku; N. Hariyo khursani; O. Kancha Lanka; P. Hara mirchi; S. Marichika; Tam. Pachhai milagai; Tel. Pacchi Mirapakaya; U. Hara mirchi.

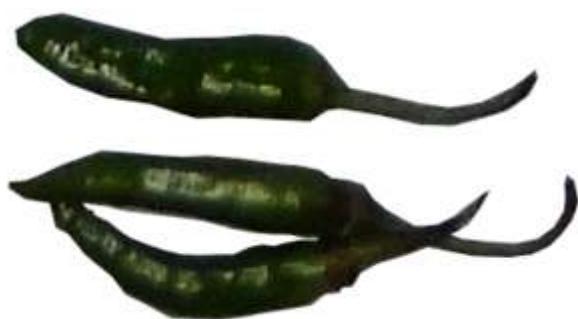

**G003. Chillies, green-3** (*Capsicum annum*); A. Kesa jalakia; G. Lila marcha; H. Hara Mirchi; Kan. Hasi Menasinakayi; Kash. Marach wangun; Kh. Soh mynken dkhar; Mal. Mulaku; M. Morok; Mar. Mulaku; N. Hariyo khursani; O. Kancha Lanka; P. Hara mirchi; S. Marichika; Tam. Pachhai milagai; Tel. Pacchi Mirapakaya; U. Hara mirchi.

**G004. Chillies, green-4** (*Capsicum annum*); A. Kesa jalakia; H. Hara Mirchi; Kan. Hasi Menasinakayi; Kash. Marach wangun; Kh. Soh mynken dkhar; Mal. Mulaku; M. Morok; Mar. Mulaku; N. Hariyo khursani; O. Kancha Lanka; P. Hara mirchi; S. Marichika; Tam. Pachhai milagai; Tel. Pacchi Mirapakaya; U. Hara mirchi.

**G005. Chillies, green-5** (*Capsicum annum*); A. Kesa jalakia; G. Vadhvani marcha; H. Hara Mirchi; Kan. Hasi Menasinakayi; Kash. Marach wangun; Kh. Soh mynken dkhar; Mal. Mulaku; M. Morok; Mar. Mulaku; N. Hariyo khursani; O. Kancha Lanka; P. Hara mirchi; S. Marichika; Tam. Pachhai milagai; Tel. Pacchi Mirapakaya; U. Hara mirchi.

**G006. Chillies, green-6 (*Capsicum annuum*);** A. Kesa jalakia; G. Lila marcha; H. Hara Mirchi; Kan. Hasi Menasinakayi; Kash. Marach wangun; Kh. Soh mynken dkhar; Mal. Mulaku; M. Morok; Mar. Mulaku; N. Hariyo khursani; O. Kancha Lanka; P. Hara mirchi; S. Marichika; Tam. Pachhai milagai; Tel. Pacchi Mirapakaya; U. Hara mirchi.

**G007. Chillies, green-7 (*Capsicum annuum*);** A. Kesa jalakia; G. Gola marcha; H. Hara Mirchi; Kan. Hasi Menasinakayi; Kash. Marach wangun; Kh. Soh mynken beb; Mal. Mulaku; M. Morok; Mar. Mulaku; N. Hariyo khursani; O. Kancha Lanka; P. Hara mirchi; S. Marichika; Tam. Pachhai milagai; Tel. Pacchi Mirapakaya; U. Hara mirchi.

**G009. Coriander, leaves (*Coriandrum sativum*);** A. Dhania paat; B. Dhone pata; G. Dhana pandada; H. Hara dhania; Kan. Kothambari; Kash. Daaniwal; Kh. Dhonia dkhar; Mal. Kothamalli; M. Fadhighom Mana; Mar. Kothimbir; N. Hario Dhaniya; O. Dhania Patra; P. Hara dhaniya patta; Tam. Kothamalli; Tel. Kothimiri; U. Hara dhaniya.

**G010. Curry leaves (*Murraya koenigii*);** A. Narasingha paat; B. Karhi-pat; G. Kadi umdo; H. Gandhela ; Kan. Karibevu; Kash. Curry patta; Kh. Sla Kori; Mal. Kariveppilai; M. Curry Pata; Mar. Gandhela; N. Kary patta; O. Bhursanga Patra; P. Kadhi patta; S. Girinimba; Tam. Kariveppilai; Tel. Karivepaku; U. Kadi ka patta.

**G011. Garlic, big cloves (*Allium sativum*);** A. Nohoru; B. Rashun; G. Lasan; H. Lehsan; Kan. Bellulli; Kash. Ruhan; Kh. Rynsun heh/ Rynsun dkhar; Mal. Vellulli; M. Chanam; Mar. Lasoon; N. Lasun; O. Rasuna; P. Lasan; S. Lashoonam; Tam. Poondu; Tel. Vellulli; U. Laisan.

**G012. Garlic, small cloves (*Allium sativum*);** A. Nohoru; B. Rashun; G. Lasan; H. Lehsan; Kan. Bellulli; Kash. Ruhan; Kh. Rynsun rit; Mal. Vellulli; M. Chanam; Mar. Lasoon; N. Lasun; O. Rasuna; P. Lasan; S. Lashoonam; Tam. Poondu; Tel. Vellulli; U. Laisan.

**G013. Garlic, single clove, Kashmir** (*Allium sativum*); A. Nohoru; B. Ek koya Rashun; G. Lasan; H. Lehsan; Kan. Bellulli; Kash. Ruhan; Kh. Rynsun; Mal. Vellulli; M. Chanam; Mar. Lasoon; N. Lasun; O. Rasuna; P. Lasan; S. Lashoonam; Tam. Ottrai poondu; Tel. Vellulli; U. Laisan.

**G014. Ginger fresh** (*Zingiber officinale*); A. Ada kesa; B. Ada; G. Adu; H. Adrak ; Kan. Shunti; Kash. Adrak; Kh. Sying bah; Mal. Inji; M. Sing; Mar. Ale; N. Aduwa; O. Ada; P. Adrak; S. Aadrank; Tam. Inji; Tel. Allam; U. Adrak.

**G015. Mango, ginger** (*Curcuma amada*); A. Aam ada; B. Amada; G. Amba Hardar; H. Aam adhrak; Kan. Mavina hasi sunthi; Kash. Adrak; Kh. Sying makhir; Mal. Mangainji; Mar. Amba haldi; P. Aam adrak; Tam. Mainjhi; Tel. Mamidiallam; U. Aam adrak.

**G016. Mint leaves** (*Mentha spicata*); A. Podina; B. Pudina; G. Phudino; H. Pudina; Kan. Pudina; Kash. Pudinth; Kh. Pudina; Mal. Pudina; M. Nungsihidak; Mar. Pudina; N. Baabari; O. Pudina Patra; P. Pudina; Tam. Pudina; Tel. Pudina; U. Pudina.

**G017. Onion, big** (*Allium cepa*); A. Piyanj; B. Peyaj; G. Kando; H. Pyaz; Kan. Eerulli; Kash. Gandha; Kh. Piat; Mal. Ulli; M. Tilhou; Mar. Kanda; N. Pyaj; O. Piaja; P. Gandhe; S. Palaanduh; Tam. Vengayam; Tel. Neerulli/ Ullipaya; U. Pyaaz.

**G018. Onion, small** (*Allium cepa*); A. Xoru Piyanj; B. Gundhun; G. Dungri (nani); H. Pyaaz Kali; Kan. Chikk Eerulli; Kash. Praan; Kh. Piat rit; Mal. Cheriya Ulli; M. Tilhou ; Mar. Kanda; N. Pyaj; P. Gandhe; Tam. Chinna vengayam; Tel. Chinna ullipaya; U. Pyaaz.

**G019. Asafoetida** (*Ferula assa-foetida*); A. Hing; B. Hing; G. Hing; H. Hing ; Kan. Hingu; Kash. Yangu; Kh. U hing; Mal. Perungayam; M. Hing; Mar. Hing; N. Hing; O. Hingu; P. Hing; S. Badhika; Tam. Perugayam; Tel. Inguva; U. Hing.

**G020. Cardamom, green** (*Elettaria cardamomum*); A. Ilasi; B. Elach; G. Alechi; H. Elaychi; Kan. Yelakki; Kash. Aa'l budu'a aa' l; Kh. Elaishi; Mal. Elakkai; M. Elaichi; Mar. Veldoda; N. Alaichi; O. Alaichi; P. Shoti elaychi; S. Ela; Tam. Elakkai; Tel. Elakkai; U. Elaichi.

**G021. Cardamom, black** (*Elettaria cardamomum*); B. Boro elach; G. Moti alechi; A. Ilasi; H. Badi elaychi; Kan. Yelakki; Kash. Aa'l budu'a aa' l; Kh. Elaichi; Mal. Elathari; M. Elaichi; Mar. Veldoda; N. Alaichi; O. Alaichi; P. Baddi elaychi; S. Ela; Tam. Elakkai; Tel. Elakkai; U. Elaichi.

**G022. Chillies, red** (*Capsicum annum*); A. Sukan jolokia; B. Shuckhuo Lonka; G. Lal marcha (sukha); H. Mirchi; Kan. Ona Menasinakayi; Kh. Sohmynken trykhong; Mal. Mulaku; M. Morok Akangba; Mar. Mulaku; N. Rato Khursani; O. Lanka; P. Lal mircha; Tam. Varamilagai; Tel. Mirapakaya; U. Lal mirchi.

**G023. Cloves** (*Syzygium aromaticum*); A. Long; B. Lobong; G. Lavang; H. Lavang; Kan. Lavanga; Kash. Ruang; Kh. U long; Mal. Krambu; M. Long; Mar. Lavang; N. Luwang; O. Labang; P. Long; S. Lavanga; Tam. Krambu; Tel. Lavangu; U. Long.

**G024. Coriander Seeds** (*Coriandrum sativum*); A. Dhoniya; B. Dhone; G. Sukha dhana; H. Dhania; Kan. Kothambari; Kash. Daaniwal; Kh. Symbai dhania; Mal. Kothambalari; M. Fadhighom Maru; Mar. Dhane; N. Dhania; O. Dhania; P. Dhania; S. Dhanyaka; Tam. Kothamalli vidhai; Tel. Dhaniyalu; U. Dhaniya.

**G025. Cumin seeds (*Cuminum cyminum*); A. Jeera; B. Jire; G. Jiru; H. Jira; Kan. Jeerage; Kash. Zyur; Kh. U jeera; Mal. Jeerakam; M. Jeera; Mar. Jira; N. Jeera; O. Jira; P. Jira; S. Jiraka; Tam. Jeerakam; Tel. Jeelakarra; U. Jira.**

**G026. Fenugreek seeds (*Trigonella foenum graecum*); A. Methi; B. Methi; G. Methi dana ; H. Methi; Kan. Menthe; Kash. Meeth; Kh. Symbai methi; Mal. Uluva; M. Methi; Mar. Methi; N. Methi; O. Methi; P. Methi; S. Methe; Tam. Venthayam; Tel. Menthulu; U. Methi.**

**G027. Mace (*Myristica fragrans*); B. Jayitri; G. Javantri; H. Avithri; Kan. Jalwatur; Kash. Jalwatur; Mal. Jathipatri; Mar. Jaypatri; O. Jayitri; P. Jaipatri; Tam. Jathipatri; Tel. Japathri; U. Javantri.**

**G028. Nutmeg (*Myristica fragrans*); A. Jaiphal; B. Jayphal; G. Jayaphad; H. Jaiphal; Kan. Jayikai mara; Kash. Zaaphal; Mal. Jathikai; Mar. Jayaphala; N. Jaiphal; O. Jaiphal; P. Jaiphal; S. Jatiphala; Tam. Jathikai; Tel. Jajikaya; U. Jaifal.**

**G029. Omum (*Trachyspermum ammi*); A. Ajwain; B. Joan; G. Ajmo; H. Ajwan; Kan. Oma; Kash. Jawind; Kh. Paspron; Mal. Ayamothakam; Mar. Onva; O. Juani; P. Ajwain; S. Ajamoda; Tam. Omum; Tel. Vamu; U. Ajwain.**

**G030. Pippali (*Piper longum*); B. Pipul; G. Khus khus; H. Pipli; Kan. Kandan Lippili; Kh. Sohmarit khlaw; Mal. Tippali; Mar. Pimpli; O. Sarupippali; P. Javantri; S. Pippali; Tam. Tippili; Tel. Pippallu; U. Pipul.**

**G031. Pepper, black** (*Piper nigrum*); A. Kola jaluk; B. Golmarichi; G. Mari; H. Kalimirchi; Kan. Kari menasu; Kash. Marutus; Kh. Soh marit; Mal. Kurumlaku; Mar. Mire; N. Marich; O. Golomarcho; P. Kalimirchi; S. Marich ushna, hapusha; Tam. Milagu; Tel. Mirayalu; U. Kaali Mirch.

**G032. Poppy seeds** (*Papaver somniferum*); A. Afoo guti; B. Posta; G. Aphina; H. Postdana; Kan. Afim; Kash. Khaskhash; Mal. Afiam; Mar. Khaskhas; N. Khus Khus; O. Postak; P. Khas Khas; S. Khasa; Tam. Khasakhasa; Tel. Gasagasalu; U. Khash Khash.

**G033. Turmeric powder** (*Curcuma domestica*); A. Halodhi; B. Holud; G. Haddar; H. Haldi; Kan. Anashina; Kash. Lader; Kh. Shynrai; Mal. Manjal; M. Yaingang; Mar. Halad; N. Besar; O. Haladi; P. Haldi; S. Haladi; Tam. Manjal; Tel. Pasupu; U. Haldi.

**H001. Almond** (*Prunus amygdalus*); A. China badam; B. Badam; G. Badam; H. Badam; Kan. Badam; Kash. Badam; Kh. Almon; Mal. Vatam kottai; M. Badam; Mar. Badam; N. Kagi Badam; O. Badam; P. Badam; Tam. Badam paruppu; Tel. Badam Pappu; U. Badam.

**H002. Areca nut, dried, brown** (*Areca catechu*); A. Sufari; B. Supari; G. Sopari; H. Supari; Kan. Adike; Kash. Supari; Kh. Kwai tyrkong; Mal. Adakka; M. Kwa Maru; Mar. Supari; N. Supari; O. Gua; P. Supari; S. Puuga; Tam. Kottai paakkku; Tel. Vakka; U. Supari.

**H003. Areca nut, dried, red color** (*Areca catechu*); A. Sufari; B. Supari; G. Sopari; H. Supari; Kan. Adike; Kash. Supaari; Kh. Kwai supari; Mal. Adakka; M. Kwa Maru; Mar. Supari; N. Supari; O. Gua; P. Supari; S. Puuga; Tam. Paakkku; Tel. Vakka; U. Supari.

**H004. Arecanut, fresh (*Areca catechu*)**; A. Kesa tamul; B. Supari; G. Sopari; H. Supari; Kan. Adike; Kash. Supaari; Kh. Kwai im; Mal. Adakka; M. Kwa Maru; Mar. Supari; N. Supari; O. Gua; P. Supari; S. Puuga; Tam. Paakkku; Tel. Vakka; U. Supari.

**H005. Cashew nut (*Anacardium occidentale*)**; A. Kaju badam; B. Hijli Badam; G. Kaju; H. Kaju; Kan. Geru beeja; Kash. Kaju; Kh. Soh kashu; Mal. Kasu andi; M. Kaju; Mar. Kaju; N. Kaju; O. Lanka ambu; P. Kaju; Tam. Mundiri paruppu; Tel. Jeedi pappu; U. Kaju.

**H006. Coconut, kernel, dry (*Cocos nucifera*)**; A. Dab narikol; B. Narkel; G. Kopra ni kachli; H. Nariyal; Kan. Thengini kai; Kash. Narjil; Kh. Snep kor trykhong; Mal. Thenga; M. Yubi Akangba; Mar. Narel; O. Nadia; P. Gola; Tam. Koppurai; Tel. Endu Kobbari; U. Khopra.

**H007. Coconut, kernel, fresh (*Cocos nucifera*)**; A. Narikol; B. Narkel; G. Nariyad; H. Nariyal; Kan. Thengina kayi; Kash. Narjeel; Kh. Snep kor im; Mal. Karikku; M. Yubi; Mar. Narel; N. Naribel; O. Paida; P. Nariyal; S. Naarikela; Tam. Thenkai; Tel. Kobbari; U. Nariyel.

**H008. Garden cress, seeds (*Lepidium sativum*)**; A. Soru manimunni ; B. Halim; G. Asadiyo; H. Halim; Kan. Allibija; Mal. Alivirai; Mar. Ahiva; P. Halim; Tam. Alivirai; Tel. Adityala.

**H009. Gingely seeds, black (*Sesamum indicum*)**; A. Kola til; B. Til; G. Kada tal; H. Til; Kan. Acchellu; Kash. Til; Kh. Nei iong; Mal. Ellu; M. Thoiding Amuba; Mar. Til; N. Teel; O. Rasi; P. Til; S. Til; Tam. Ellu; Tel. Nuvvulu; U. Til .

**H010. Gingely seeds, brown** (*Sesamum indicum*); A. Matia rangar til; B. Til; G. Tal; H. Til; Kan. Acchellu; Kash. Til; Kh. Nei; Mal. Ellu; M. Thoiding; Mar. Til; N. Teel; O. Rasi; P. Til; S. Til; Tam. Ellu; Tel. Nuvvulu; U. Til.

**H011. Gingely seeds, white** (*Sesamum indicum*); A. Boga til; B. Til; G. Safed tal; H. Til; Kan. Acchellu; Kash. Til; Kh. Nei; Mal. Ellu; M. Thoiding Angouba; Mar. Til; N. Teel; O. Rasi; P. Til; S. Til; Tam. Ellu; Tel. Nuvvulu; U. Til.

**H012. Ground nut** (*Arachis hypogaea*); A. Badam; B. China badam; G. Singdana; H. Moog phali; Kan. Kadale kayi; Kash. Moong phalli; Kh. Badam; Mal. Nilakkadalai; M. Leibak Hawaii; Mar. Bhui mug; O. China badam; P. Moog phali; Tam. Verkadai; Tel. Verusenaga; U. Moog phali.

**H013. Mustard, seeds** (*Brassica nigra*); A. Soriyah; B. Sorse; G. Rai; H. Rai; Kan. Sasuve; Kash. Assur; Kh. Symbai syrso; Mal. Kadugu; M. Hangham Maru; Mar. Mohori; N. Rayo; O. Sorisa; P. Rai; S. Sarssapa; Tam. Kadugu; Tel. Avalu; U. Rai.

**H014. Linseeds** (*Linum usitatissimum*); B. Tishi; G. Adsi; H. Alsi; Kan. Agasi; Kash. Ailsh; Mal. Cheruchana vithu; Mar. Jawas; O. Pesi; P. Alsi; S. Atasii; Tam. Ali vidai; Tel. Avise ginzalu; U. Alsi.

**H015. Niger seeds, black** (*Guizotia abyssinica*); A. Sorguja; B. Ram til; G. Kada tal; H. Kala til; Kan. Gurellu; Kash. Bazar-Bhang; Mal. Karim jeerakam; Mar. Karale; Tam. Kattelu; Tel. Valasulu.

**H016. Niger seeds, grey** (*Guizotia abyssinica*); A. Sorguja; B. Ram til; G. Tal; H. Kala til; Kan. Gurellu; Kash. Bazar-Bhang; Mal. Karim jeerakam; Mar. Karale; Tam. Kattelu; Tel. Valasulu.

**H017. Pine seed** (*Pinus sp.*); G. Chilgoza; H. Chilgoza; Kash. Chilgoza; Kh. Symbai soh kseh; Mar. Jhurane biya; P. Rhi.

**H018. Pistachio nut** (*Pistacia vera*); A. Pista; B. Pesta; G. Pista; H. Pista; Kan. Pista; Kash. Pista; Kh. Pista; Mal. Pista; Mar. Pista; N. Pista; O. Pista; P. Pista; Tam. Pista; Tel. Pista; U. Pista.

**H019. Safflower seeds** (*Carthamus tinctorius*); B. Kusum; G. Kusumbo; H. Kardi; Kan. Kusambe; Kh. Symbai tiew sngi; Mal. Karadi; Mar. Karadi; Tam. Sendurkan vidhai; Tel. Kusuma ginzalu.

**H020. Sunflower seeds** (*Helianthus annuus*); A. Beli phular guti; B. Suraj mukhi; G. Suraj mukhi na bee; H. Surya mukhi; Kan. Sryakānti bijagalu; Kh. Symbai tiew sngi; Mal. Suryakanthi; M. Numitlei Maru; Mar. Surya mukhi; O. Surjya Mukhi Manji; P. Suraj mukhi; Tam. Suryakanthi vidhai; Tel. Podduthirugidi puvvu ginzalu.

**H021. Walnut** (*Juglans regia*); A. Akhrot; B. Akhrot; G. Akhrot; H. Akhrot; Kan. Akrodu; Kash. Dhoon; Kh. Walnut; Mal. Akrottandi; M. Heijukha; Mar. Akhrod; N. Okhar; O. Akhoot; P. Akhrot; Tam. Akhrot; Tel. Akrot kaya; U. Akhrut.

**I001. Jaggery, cane** (*Saccharum officinarum*); A. Gur; B. Gurh; G. God; H. Gud; Kan. Bella; Kash. Gor; Kh. Mithai Gur; Kon. Godd; Mal. Vellam; M. Chini Anganba; Mar. Gul; O. Guda; P. Gud; Tam. Mandavellam; Tel. Bellam; U. Gud.

**I002. Sugar cane, juice** (*Saccharum officinarum*); A. Kunhiyar; B. Akher rosh; G. Sherdino ras; H. Ganne-karas; Kan. Kabbina halu; Kash. Ganne rus; Kh. Soh Pai; Mal. Karumbin neeru; M. Chuhing; Mar. Usacha rasa; O. Aakhu Dorua; P. Ganne-da-ras; Tam. Karumbu charu; Tel. Cheruku rasam; U. Ganne-ke-ras.

**J001. Button mushroom, fresh** (*Agaricus* sp.); A. Mushroom; B. Banger chata; G. Biladi no top; Kan. Aanabay/Aanabe; Kash. Hadder; Kh. Tit budam; Mal. Kun koon; M. Chenghum; Mar. Bhoochhtra; O. Chatu; P. Khoomba; Tam. Kaalaan; Tel. Putta Godugu.

**J002. Chicken mushroom, fresh** (*Lactiporus* sp.); A. Mushroom; B. Banger chata; G. Biladi no top; Kan. Aanabay/Aanabe; Kash. Hadder; Kh. Tit tyndong; Mal. Kun koon; M. Chenghum; Mar. Bhoochhtra; O. Chatu; P. Khoomba; Tam. Kaalaan; Tel. Putta Godugu.

**J003. Shiitake mushroom, fresh** (*Lentinula* sp.); A. Mushroom; B. Banger chata; G. Biladi no top; Kan. Aanabay/Aanabe; Kash. Hadder; Mal. Kun koon; M. Uyen; Mar. Bhoochhtra; O. Chatu; P. Khoomba; Tam. Kaalaan; Tel. Putta Godugu.

**J004. Oyster mushroom, dried** (*Pleurotus* sp.); B. Banger chata; G. Biladino top; Kan. Aanabay/Aanabe; Kash. Hadder; Mal. Kun koon; M. Chenghum; Mar. Bhoochhtra; O. Chatu; P. Khoomba; Tam. Kaalaan; Tel. Putta Godugu.

**K001. Toddy** (*Borassus flabellifer*) ; A. Tari; B. Tari; Kan. Henda; G. Tadi; H. Tarai; Kh. Kiad lieh; Mar., O. Tadi; P. Todhi; Mal., Tam., Tel., Kallu.

**K002. Coconut water** (*Cocos nucifera*); A. Dab narikolor pani; B. Daberjal; G. Nariyad nu pani; H. Nariyal ka pani; Kan. Thenga neeru; Kash. Narji pooen; Kh. Um snepkor Mal. Thenga vellam; M. Yubi Mahi; Mar. Naral pani; O. Paida pani; P. Gola da pani; Tam. Ilaneer; Tel. Kobbari neeru.

**L001. Milk, Buffalo;** A. Mohor gakhir; B. Dudha (Mosher); G. Bhes nu dhudh; H. Bhains ka dhood; Kan. Uemma halu; Kash. Doodh; Kh. Dud muid; Mal. Kerbau paal; M. Eroi Sanghom; Mar. Doodh (Maish); O. Mainsi dudha; P. Maz da doodh; Tam. Erumaipal; Tel. Gedha/Barre palu.

**L002. Milk, Cow;** A. Garoor gakhir; B. Doodh (garu); G. Gai nu dhudh; H. Gai ka doodh; Kan. Hasuvina halu; Kash. Doodh; Kh. Dud masi; M. San Sanghom; Mar. Doodh(gay); O. Gai dudha; P. Gaan da doodh; S. Gow kshiram; Tam. Pasumpaal; Tel. Aavu paalu.

**L003. Paneer;** A. Paneer; B. Chena; G. Paneer; H. Chhena; Kan. Tali; Kash. Chaman; Kh. Paneer; Mal. Palkatti; M. Channa; O. Chhena; P. Paneer; Tam. Paladai; Tel. Paalavirugudu.

**L004. Khoa;** A. Khoa; B., H., Kan., Mal., P., Tel. Khoa; G. Mavo; Kash. Khoya; Kh. Malai khowa; O. Khua; P. Khoya; Tam. Thirattupal.

**P001. Allathi** (*Elops machnata*)  
[Place of collection: Chennai]

**P002. Aluva** (*Parastromateus niger*)  
[Place of collection: Vizag, Goa and Mumbai]

**P03. Anchovy** (*Stolephorus indicus*)  
[Place of collection: Chennai and Kochi]

**P004. Ari fish** (*Aprion virescens*)  
[Place of collection: Kochi]

**P005. Betki** (*Lates calcarifer*)  
[Place of collection: Kolkata]

**P006. Black snapper** (*Macolor niger*)  
[Place of collection: Kolkata]

**P007. Bombay duck** (*Harpodon nehereus*)  
[Place of collection: Mumbai and Kolkata]

**P008. Bommuralu** (*Muraenesox cinerius*)  
[Place of collection: Chennai, Goa and Vizag]

**P09. Cat fish** (*Tachysurus thalassinus*)  
[Place of collection: Chennai]

**P010. Chakla** (*Rachycentron canadum*)  
[Place of collection: Mumbai, Vizag, Goa, Mandapam and Chennai]

**P011. Chappal** (*Aluterus monoceros*)  
[Place of collection: Goa]

**P012. Chelu** (*Elagatis bipinnulata*)  
[Place of collection: Vizag and Chennai]

**P013. Chembali** (*Lutjanus quinquelineatus*)  
[Place of collection: Kochi]

**P014. Eri meen** (*Pristipomoides filamentosus*)  
[Place of collection: Kochi]

**P015. Gobro** (*Epinephelus diacanthus*)  
[Place of collection: Mumbai and Goa]

**P016. Guitar fish** (*Rhinobatos prahli*)  
[Place of collection: Chennai]

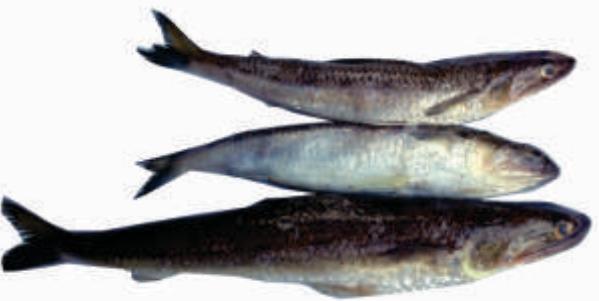

**P017. Hilsa** (*Tenualosa ilisha*)  
[Place of collection: Kochi]

**P018. Jallal** (*Arius* sp.)  
[Place of collection: Vizag]

**P019. Jathi vela meen** (*Lethrinus lentjan*)  
[Place of collection: Mumbai and Mandapam]

**P020. Kadal bral** (*Synodus indicus*)  
[Place of collection: Kochi]

**P021. Kadali** (*Nemipterus mesoprion*)  
[Place of collection: Chennai]

**P022. Kalamaara** (*Leptomelanosoma indicum*)  
[Place of collection: Goa and Vizag]

**P023. Kalava** (*Epinephelus coioides*)  
[Place of collection: Mandapam]

**P024. Kanamayya** (*Lutjanus rivulatus*)  
[Place of collection: Chennai and Vizag]

**P025. Kannadi paarai** (*Alectis indicus*)  
[Place of collection: Mumbai, Chennai and Mandapam]

**P026. Karimeen** (*Etroplus suratensis*)  
[Place of collection: Kochi]

**P027. Karnagawala** (*Anchoa hepsetus*)  
[Place of collection: Vizag]

**P028. Kayrai** (*Thunnus albacares*)  
[Place of collection: Chennai]

**P029. Kiriyana** (*Atule mate*)  
[Place of collection: Kochi]

**P030. Kite fish** (*Mobula kuhlii*)  
[Place of collection: Kochi]

**P031. Korka** (*Terapon jarbua*)  
[Place of collection: Kochi]

**P032. Kulam paarai** (*Carangoides fulvoguttatus*)  
[Place of collection: Chennai]

**P033. Maagaa** (*Polynemus plebeius*)  
[Place of collection: Vizag]

**P034. Mackerel** (*Rastrelliger kanagurta*)  
[Place of collection: Chennai, Mumbai and Goa]

**P035. Manda clathi** (*Naso reticulatus*)  
[Place of collection: Mandapam]

**P036. Matha** (*Acanthurus mata*)  
[Place of collection: Chennai and Vizag]

**P037. Milk fish** (*Chanos chanos*)  
[Place of collection: Mandapam]

**P038. Moon fish** (*Mene maculata*)  
[Place of collection: Mumbai]

**P039. Mullet** (*Mugil cephalus*)  
[Place of collection: Mumbai, Kochi and Chennai]

[Place of collection: Mandapam]

**P041. Myil meen** (*Istiophorus platypterus*)  
[Place of collection: Chennai and Mandapam]

**P042. Nalla bontha** (*Epinephelus* sp)  
[Place of collection: Vizag]

**P043. Narba** (*Caranx sexfasciatus*)  
[Place of collection: Vizag and Mumbai]

**P044. Paarai** (*Caranx heberi*)  
[Place of collection: Chennai]

**P045. Padayappa** (*Canthidermis maculata*)  
[Place of collection: Kochi]

**P046. Pali kora** (*Panna microdon*)  
[Place of collection: Kochi]

**P047. Pambada** (*Lepturacanthus savala*)  
[Place of collection: Chennai and Kochi]

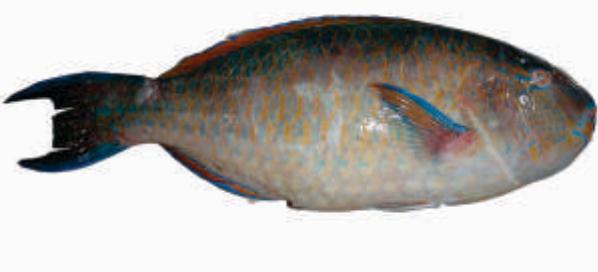

**P048. Pandukopa** (*Pseudosciaena manchurica*)  
[Place of collection: Vizag]

**P049. Parava** (*Lactarius lactarius*)  
[Place of collection: Kochi]

**P050. Parcus** (*Psettodes erumei*)  
[Place of collection: Mumbai]

**P051. Parrot fish** (*Scarus ghobban*)  
[Place of collection: Mandapam]

**P052. Perinkilichai** (*Pinjalo pinjalo*)  
[Place of collection: Chennai]

**P053. Phopat** (*Coryphaena hippurus*)  
[Place of collection: Chennai, Kochi, Vizag and Mumbai]

**P054. Piranha** (*Pygopristis* sp.)  
[Place of collection: Kochi]

**P055. Pomfret, black** (*Parastromateus niger*)  
[Place of collection: Kochi, Chennai, Mumbai, Mandapam, Vizag and Goa]

**P056. Pomfret, snub nose** (*Trachinotus blochii*)  
[Place of collection: Mumbai]

**P057. Pomfret, white** (*Pampus argenteus*)  
[Place of collection: Mumbai and Goa]

**P058. Pranel** (*Gerres* sp.)  
[Place of collection: Kochi]

**P059. Pulli paarai** (*Gnathanodon speciosus*)  
[Place of collection: Chennai]

**P060. Queen fish** (*Scomberoides commersonianus*)  
[Place of collection: Chennai, Kochi and Goa]

**P061. Raai fish** (*Lobotes surinamensis*)  
[Place of collection: Chennai and Vizag]

**P062. Raai vanthu** (*Epinephelus chlorostigma*)  
[Place of collection: Vizag]

**P063. Rani** (*Pink perch*)  
[Place of collection: Goa, Kochi, Chennai, Mumbai, Vizag and Mandapam]

**P064. Ray fish, bow head, spotted** (*Rhina ancylostoma*)  
[Place of collection: Kochi]

**P065. Red snapper** (*Lutjanus argentimaculatus*)  
[Place of collection: Vizag]

**P066. Red snapper, small** (*Priacanthus hamrur*)  
[Place of collection: Goa]

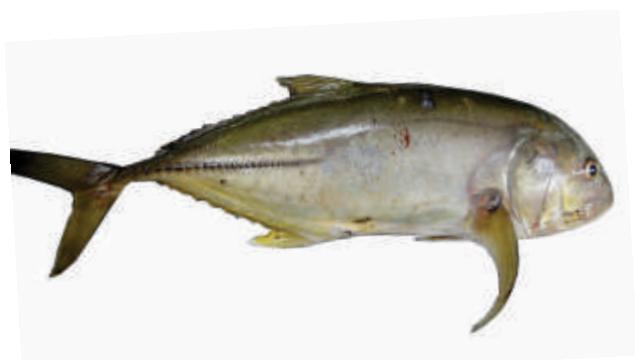

**P067. Sadaya** (*Platax orbicularis*)  
[Place of collection: Chennai]

**P068. Salmon** (*Salmo salar*)  
[Place of collection: Goa]

**P069. Sangada** (*Nemipterus japonicus*)  
[Place of collection: Chennai]

**P070. Sankata paarai** (*Caranx ignobilis*)  
[Place of collection: Chennai]

**P071. Sardine** (*Sardinella longiceps*)  
[Place of collection: Kolkata]

**P072. Shark** (*Carcharhinus sorrah*)  
[Place of collection: Goa and Mandapam]

**P073. Shark, hammer head** (*Sphyraena mokarran*)  
[Place of collection: Kolkata]

**P074. Shark, spotted** (*Stegostoma fasciatum*)  
[Place of collection: Kochi]

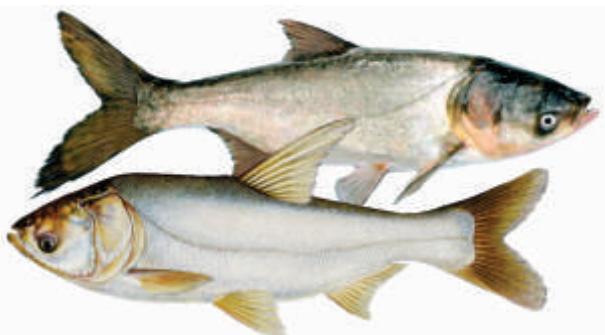

**P075. Shelavu** (*Sphyraena jello*)  
[Place of collection: Chennai, Goa, Vizag and Kochi]

**P076. Silan** (*Silonia silondia*)  
[Place of collection: Kolkata]

**P077. Silk fish** (*Beryx* sp.)  
[Place of collection: Kochi]

**P078. Silver carp** (*Hypophthalmichthys molitrix*)  
[Place of collection: Kolkata]

**P079. Sole fish** (*Cynoglossus arel*)  
[Place of collection: Vizag]

**P080. Stingray** (*Dasyatis pastinaca*)  
[Place of collection: Kolkata]

**P081. Tarlava** (*Drepane punctata*)  
[Place of collection: Chennai and Vizag]

**P082. Tholam** (*Plectorhinchus schotaf*)  
[Place of collection: Chennai and Mandapam]

**P083. Tilapia** (*Oreochromis niloticus*)  
[Place of collection: Kolkata]

**P084. Tuna** (*Euthynnus affinis*)  
[Place of collection: Chennai, Vizag, Goa, Mandapam and Kochi]

**P085. Tuna, striped** (*Katsuwonus pelamis*)  
[Place of collection: Kochi]

**P086. Valava** (*Chirocentrus nudus*)  
[Place of collection: Vizag]

**P087. Vanjaram** (*Scomberomorus commerson*)  
[Place of collection: Chennai and Goa]

**P088. Vela meen** (*Aprion virescens*)  
[Place of collection: Mandapam]

**P089. Vora** (*Siganus javus*)  
[Place of collection: Chennai and Mandapam]

**P090. Whale shark** (*Galeocerdo cuvier*)  
[Place of collection: Mandapam]

**P091. Xiphinis** (*Xiphias gladius*)  
[Place of collection: Mandapam]

**P092. Eggs, cat fish** (*Ompok bimaculatus*)  
[Place of collection: Kolkata]

**Q001. Crab** (*Menippe mercenaria*)  
[Place of collection: Kolkata]

**Q002. Crab, sea** (*Portunus sanguinolentus*)  
[Place of collection: Chennai]

**Q003. Lobster, brown** (*Thenus orientalis*)  
[Place of collection: Chennai]

**Q004. Lobster, king size** (*Thenus orientalis*)  
[Place of collection: Chennai, Vizag, Mumbai, Kochi, Mandapam and Goa]

**Q005. Mud crab (*Scylla tranquebarica*)**  
[Place of collection: Goa]

**Q006. Oyster (*Crassostrea* sp.)**  
[Place of collection: Goa]

**Q007. Tiger prawns, brown (*Solenocera crassicornis*)**  
[Place of collection: Chennai]

**Q008. Tiger Prawns, orange (*Penaeus monodon*)**  
[Place of collection: Kochi]

**R001. Clam, green shell (*Perna viridis*)**  
[Place of collection: Goa]

**R002. Clam, white shell, ribbed (*Meretrix meretrix*)**  
[Place of collection: Goa]

**R003. Octopus** (*Octopus vulgaris*)  
[Place of collection: Mumbai]

**R004. Squid, black** (*Loligo sp.*)  
[Place of collection: Kolkata]

**R005. Squid, hard shell** (*Sepia pharaonis*)  
[Place of collection: Goa]

**R006. Squid, red** (*Loligo duvaucelii*)  
[Place of collection: Chennai and Goa]

**R007. Squid, white, small** (*Uroteuthis duvauceli*)  
[Place of collection: Mumbai]

**S001. Cat fish** (*Tandanus tandanus*)  
[Place of collection: Kolkata]

**S002. Catla** (*Catla catla*)  
[Place of collection: Kolkata]

**S003. Fresh water Eel** (*Anguilla anguilla*)  
[Place of collection: Kolkata]

**S004. Gold fish** (*Carassius auratus*)  
[Place of collection: Kolkata and Bengaluru]

**S005. Pangas** (*Pangasianodon hypophthalmus*)  
[Place of collection: Kolkata]

**S006. Rohu** (*Labeo rohita*)  
[Place of collection: Kolkata]

**S007. Crab** (*Pachygrapsus* sp.)  
[Place of collection: Kolkata]

**S008. Prawns, big** (*Macrobrachium rosenbergii*)  
[Place of collection: Bengaluru]

**S009. Prawns, small** (*Macrobrachium sp.*)  
[Place of collection: Mumbai]

**S010. Tiger prawns** (*Macrobrachium sp.*)  
[Place of collection: Kolkata]
